About

At ProBid, we transform project delivery in the Defence, Nuclear and Construction sectors by integrating Decision Intelligence. Our niche approach integrates Quantitative Cost and Schedule Risk Analysis and Advanced Analytics with our Knowledge and Data Management infrastructure to offer unmatched capability in project delivery.

We are dedicated to empowering decision-making with integrity, increasing social value and advancing the project profession, whilst ensuring solutions are aligned with client objectives.

By fostering a culture of innovation and experimentation, we ensure our services are future-ready. Our team of qualified and experienced project professionals, along with our industry and vendor partnerships, are the perfect complement.

Our consultancy uniquely embeds our Digital PMO Transformation and Integrated Modelling Services for project organisations to adopt data in the cloud, emerging technologies and data-driven insights for strategic direction.

ProBid

Empowering Decisions, Enhancing Project Outcomes
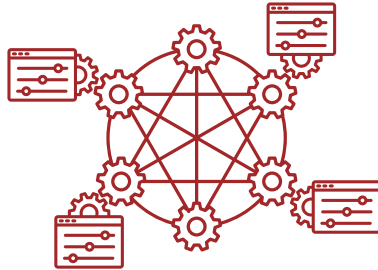

What we do

We help drive successful outcomes for mega and major projects through comprehensive project controls, advanced analytics, transformative digital solutions, and sophisticated modelling techniques. Our expertise spans across industries, helping clients make informed decisions, optimise performance, and achieve their strategic objectives.

Who we are

Incorporated in 2018, ProBid Ltd is a consultancy born from the founder's extensive experience as an Estimator and Risk Analyst at the planning stage of public and private sector major projects. Founded on the principle that strategic decision-making should be data-driven and rooted in expert analysis with utmost integrity.

Why ProBid

Our small team combines 35+ years of expertise on complex major and mega projects in roles spanning Project Controls, Project Management and Data Science. Additionally, strategic industry and vendor partnerships give us an expert resource pool, enabling us to integrate and tailor cloud and on-premises technology.

Our Approach

DECISION INTELLIGENCE

INTEGRATED MODELLING
ADVANCED ANALYTICS
KNOWLEDGE MANAGEMENT
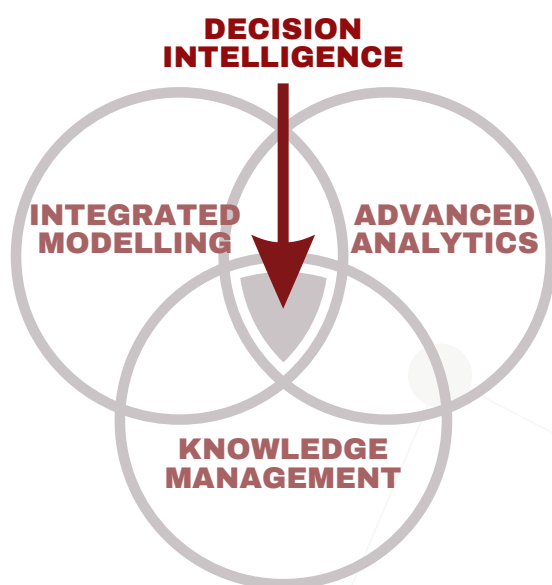

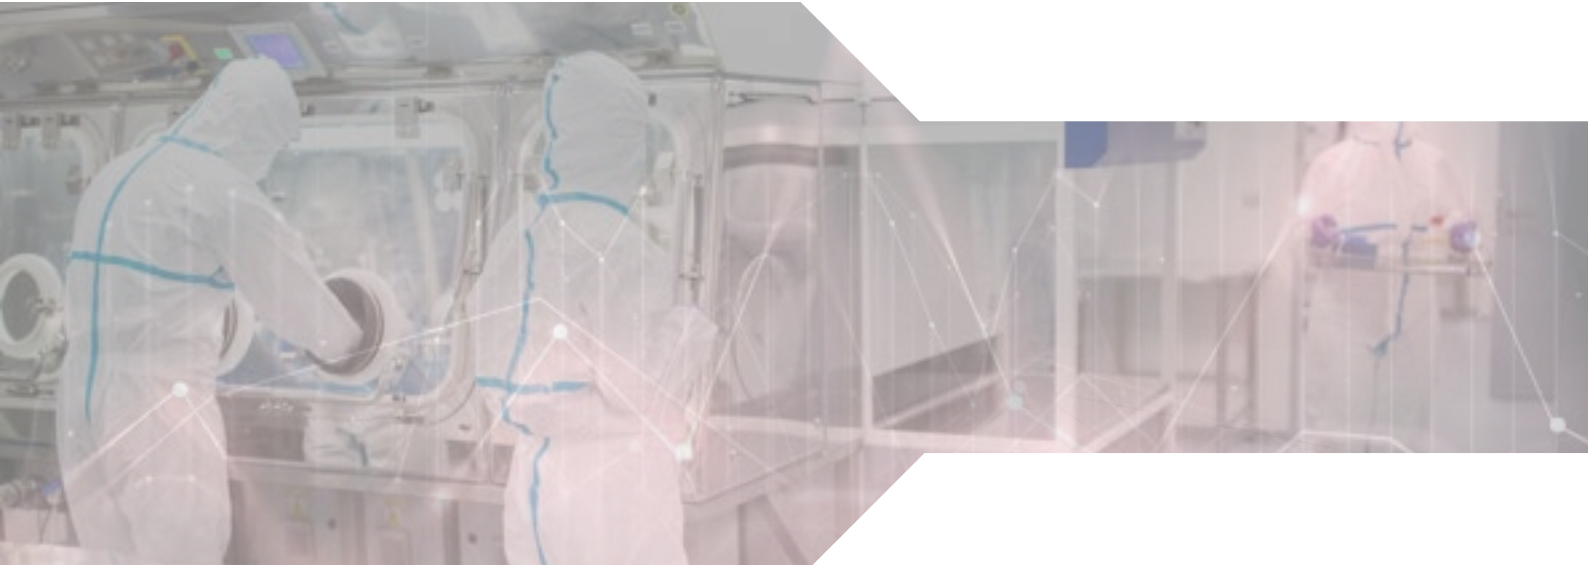

Decision Intelligence, a strategic nexus where our three core pillars converge, empowering decisions to enhance project outcomes.

INTEGRATED MODELLING:

1 Our Integrated Modelling combines comprehensive services with a systems approach for robust data integration for enhanced programmatic modelling across the project lifecycle.

ADVANCED ANALYTICS:

2 Our Advanced Analytics harnesses machine learning, visual tools, and AI to elevate project outcomes from automation and data-driven insights to predicting variance of outcomes.

KNOWLEDGE MANAGEMENT:

3 Our Knowledge Management approach leverages knowledge graphs and databases to enhance data comprehension, standardise project taxonomies, and streamline information flow.

**Empowering Decisions,
Enhancing Project Outcomes**

Our Services

We offer two distinct services under the G Cloud 14 framework, designed to enhance project delivery and add substantial value. Both services are complementary but can also be procured separately to best meet your organisations needs.

1 - DIGITAL PMO TRANSFORMATION

Our Digital PMO Transformation service empowers projects with data, analytics, and AI to drive project and programme success. Through a phased approach, we assess your current PMO landscape, develop a tailored data strategy, and implement an integrated project controls system architecture.

2 - INTEGRATED MODELLING SERVICES

ProBid's cloud-based integrated modelling services combines project controls artefacts for cross-portfolio analysis. Our evidence-based approach provide reliable decision intelligence, empowering robust investment appraisals and business cases with confidence.

Enhancing Project Outcomes**

Our Services

DIGITAL PMO TRANSFORMATION

Our Digital PMO Transformation service empowers organisations to leverage data, analytics, and AI to drive project and programme success. Our solutions could be a replacement or complement your existing cloud infrastructure. By combining our expertise in data strategy, cloud infrastructure, and visual analytics with our vendor partnerships, we enable clients to make informed decisions faster to achieve their business objectives.
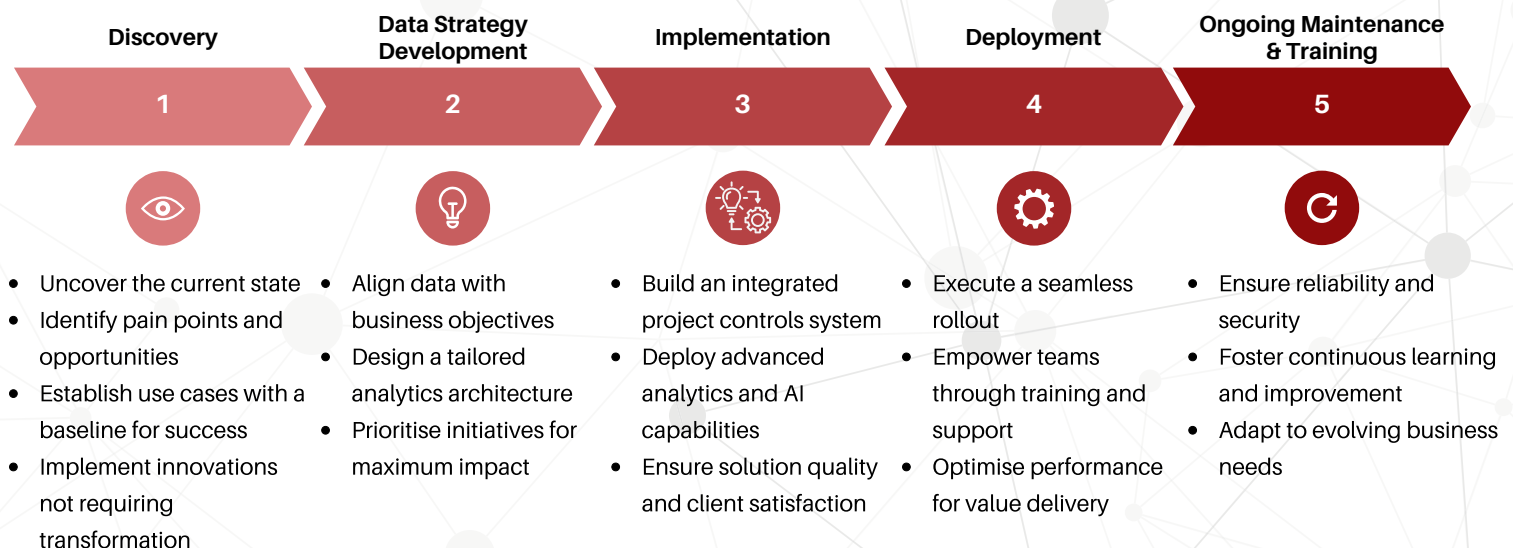

Key Service Features

- Assessment of current PMO processes, data landscape, and identification of improvement opportunities
- Development and implementation of a tailored data strategy and integrated systems architecture
- Implementation of Minimum Viable Products (MVP's) supported by our partnerships with leading cloud vendors
- Deployment of assured and tested Alpha/Beta solutions through to final release
- Strategic partnerships with leading cloud vendors with trained resources for end-to-end support
- Comprehensive client training to foster a data-driven culture and enable self-sufficiency

Benefits

- Enhanced decision-making capabilities through real-time, data-driven insights and advanced analytics
- Optimised Project Controls through Integration of Interconnected data across projects and enterprise
- Increased efficiency and scalability through streamlined processes, automation, and future-proofed infrastructure
- Improved project data visibility, transparency, and collaboration across projects and programmes
- Knowledge transfer and upskilling of client teams to drive continuous improvement and innovation

Our Delivery Model

Discovery	Data Strategy Development	Implementation	Deployment	Ongoing Maintenance & Training
1	2	3	4	5

- Uncover the current state
- Identify pain points and opportunities
- Establish use cases with a baseline for success
- Implement innovations not requiring transformation

- Align data with business objectives
- Design a tailored analytics architecture
- Prioritise initiatives for maximum impact

- Build an integrated project controls system
- Deploy advanced analytics and AI capabilities
- Ensure solution quality and client satisfaction

- Execute a seamless rollout
- Empower teams through training and support
- Optimise performance for value delivery

- Ensure reliability and security
- Foster continuous learning and improvement
- Adapt to evolving business needs
