1. The Solution

An ANS Power BI Check is a review of your existing Power BI deployment OR report, it is designed to provide you an unbiased view of where you are and a constructive detailed strategy for achieving long term success. As part of the Check, we will carry out a review of:

•   Deployment Architecture OR Data Model Design

•   Infrastructure (Connectivity & Integration)

•   Security & Governance

•   Performance & Scalability

•   Administration (Licensing and Workspaces)

•   Content Delivery Approach and Future Goals (Datasets, Reports, Dashboards, Visuals)

•   Release Management/Version Control

•   Usability (User Adoption & Ways of working)

At the end of the Check, you will receive a consultation of how you are performing and what recommendations could be implemented to get you to where you want to be.

2. Execution Activity

ANS will assist you to onboard the Solution Architect who will carry out the Power BI Check. The architect will require access to your deployment OR report. This is provided by adding the Architect's Microsoft account as a guest in the customer's Azure Active Directory and assigning a Power BI Pro license and granting relevant permissions as detailed below.

Assign a temporary Power BI Pro license.
- <u>Assigning a Power BI Pro</u> from your organisation to a guest user lets that guest user view content shared with them.

Allow Workspace access.
- Your Admin will need to give <u>'Member' Access</u> Status to our Solution Architect

Once successfully onboarded, the architect's account should remain live for the duration of the Power BI Check, after which it must be removed from the customer's directory.
