1 Service Overview

Capgemini's Cloud Platform Selection framework can help in the selection of a platform to deliver cloud based digital experiences. This flexible framework comprises a tried and tested toolset and process for defining and prioritising requirements, vendor identification and accessing platforms to elicit a data driven platform selection recommendation.

2 Business Need

Many public sector organisations need to select a platform or set of platforms best suited to meet their needs. Understanding the platform categories and the best solution can be challenging, especially when considering cloud-based solutions as part of a composable architecture, driving a digital experience. Often there can be a wide range of options available and there is a need to narrow down the field so that more intense assessment can be made against the leading contenders.

Capgemini has created a flexible framework that can address these challenges, be that a need for a single platform covering a discrete set of requirements, or a more enterprise solution or set of platforms as part of a digital suite and/or composable architecture.

3 Our Approach

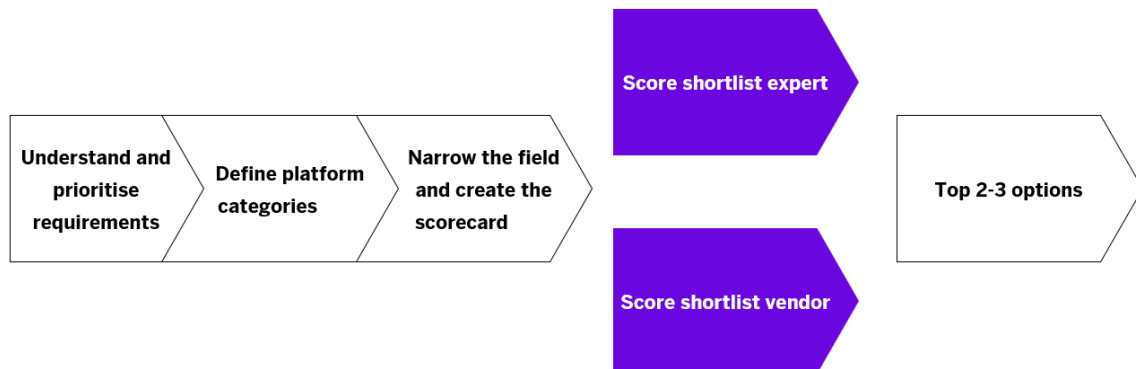

Capgemini's approach is to work in a collaborative manner to guide the selection of platforms to deliver digital experiences based upon organisational and especially, user centric needs. Key to this, is to ensure that there are robust requirements available and that these are relevant to inform platform selection decisions. Our standard approach is to capture both functional and non-functional requirements via workshops in Capgemini's Platform Requirements Document.

The requirements are used by Capgemini to define the platform categories which will be under consideration. This includes consideration of whether this will be a single platform category or multiple platforms from different categories as part of a composable architecture and/or wider digital suite. Where needed Capgemini can optionally assist in making technical architecture decisions. e.g. between composable and monolith architectures.

A long list of platforms are defined within a category before being reduced to a short list in a data driven approach, using Capgemini's custom Platform Selection Tool. The tool allows vendors and/or subject matter experts in the platform category to provide information on platform functionality. The information provided results in a score for the platform's ability to meet the requirements with the weighted value of each requirement being hidden from vendors to reduce the likelihood of them biasing the outcome. As well as the ability of a platform's features to meet both the functional and technical needs, the overall score in the Platform Selection Tool takes into account the total cost of ownership, including areas such as licensing, implementation, support and training.

Stage 1 | Creating a platform shortlist

Once the platforms have reduced to a short-list of leading contenders, Vendor demos are conducted, with scoring being against the key features being demonstrated. The outcome of the combined scores from the vendor demos are assessed alongside the scores from the Platform Selection Tool to make a final selection.

Capgemini can optionally include a technology proof of concept to provide additional validation of any of the platforms suitability to deliver against requirements. This additional process is most commonly used where there is any uncertainty in requirements such as unproven integrations.

Stage 2 | Final platform assessment

The framework can be tailored to the specific needs, be that selection of single or multiple platforms; inclusion of requirements capture or analysis of previously collated requirements; or narrowing down through a long list to a short list instead of selection between previously identified options.

4 Buyer Responsibilities

Please refer to the Supplier Terms listed with this service on the Platform. These may contain additional Buyer obligations/costs the Buyer is subject to that are not identified anywhere else in the Supplier's Application or on the Platform.

5 Service Management

Not applicable.

6 Protection of Data

This service is based on a security classification of 'Official', however should you have a requirement for a different security classification that you would like us to consider, please contact us to discuss.

7 On-boarding and Off-boarding

Capgemini shall undertake on-boarding and off-boarding activities agreed within the Order Form (including as a minimum an exit plan in line with the Call-Off Contract terms) which will be charged for in accordance with the Pricing section for this service.

8 Skills and Knowledge Transfer

Capgemini recognises that skills and knowledge transfer is a critical element in the provision of G-Cloud services to public sector clients. Where possible and applicable, this forms part of the delivery plan for the service agreed at the start of the engagement. Our consultants and engineers are experienced in providing skills and knowledge transfer for major private and public sector clients.

Where appropriate, we may use a standard approach, tailored to topic, skills-gap and individual, to ensure consistency and effectiveness. The approach, Capgemini's Assess-Plan-Implement framework, has been used repeatedly by our teams to structure the work involved in transferring skills and creating new teams capable of driving and sustaining change long after the end of the formal programme. The framework can be applied throughout a project to understand knowledge transfer objectives, plan training delivery methods and materials, and deliver and evaluate success.

9 Vendor Accreditations/Awards

For the 12th year in a row, Capgemini has been recognized as one of the World's Most Ethical Companies® by the Ethisphere® Institute. This is an acknowledgment of our ethical culture that makes us an employer of choice and responsible player in the eyes of our clients, shareholders, and the wider community.
