

Capability, Capacity and Maturity Assessment

Description

Channel 3 offer a Capability, Capacity and Maturity Assessment (CCM) to help organisations plan and understand their current state ICT Infrastructure and service, and readiness for adopting cloud based solutions within the public sector. This is a comprehensive assessment which is a proven tool for organisations to gauge current capability.

When planning to implement cloud hosting or software services it is imperative to understand readiness. This is achieved by conducting an ICT Capability, Capacity and Maturity (CCM) assessment. The output of this assessment then acts as a baseline against which: options can be assessed, decisions can be made, strategy can be defined and roadmaps can be developed.

Current capability is assessed across several areas – covering people and process as well as technology. Opportunities for improvement are highlighted for each area, which feed into any broader vision or strategy work being undertaken. The review also provides an objective assessment against typical best-in-class delivery for similar organisations. The findings will be converted to an objective score, showing current state. There will also be a set of recommendations, which are generally time-limited to a scope of around twelve months. Each recommendation could be viewed as the start of a case for change, but will not necessarily have the full scope of risks, costs, etc.

Features

- Independent assessment of ICT Capability, Capacity & Maturity
- Extensive public sector IT consultancy experience
- An objective assessment against typical best-in-class for similar organisations
