

CLOUDCARE® FOR AWS – ASSISTED MIGRATION

FACTSHEET

CDW Professional Services

CDW is an award winning managed & professional services provider, trusted by some of the UK's largest businesses to deliver complex Cloud infrastructure services.

Benefits

- Lowers the cost and complexity barriers of migration
- Expert installation and configuration of best-in-class tools that are right for you
- Comprehensive Cloud workload migration knowledge
- Extensive experience in helping customers to move into private & public Cloud platforms
- Increases the skills of your in-house IT teams
- ISO, Prince2, and Cloud-accredited expertise
- Reduces the burden of adopting Cloud on in-house IT & Project teams

Moving your workloads to AWS requires careful planning and the right set of tools and skills in order to minimise risk and to avoid downtime for your customers and users. An assisted migration from CDW can help you increase the speed of your migration to the Cloud, decrease cost, avoid inconvenience and arm your IT teams with practical skills for the future with, expert support guidance available when you need it.

Introducing CloudCare® for AWS – Assisted Migration

CloudCare® for AWS – Assisted Migration is professional services engagement delivered by CDW to help customers to migrate their existing cloud or physical and virtual workloads to AWS by equipping them with the skills they need to confidently migrate your workloads to the Cloud.

Assisted Migration by CDW

An Assisted Migration is a partnership between CDW's Cloud and Project Management experts and your in-house IT team that can help to reduce the time, cost and complexity of your migration to AWS.

CDW will recommend, deploy and configure the right migration tools for your current environment, and will run a pilot migration to familiarise your IT team with the tool and migration process before handing the control over to you.

Once you start migrating your workloads to AWS, your aligned

CDW Project Manager will be on-hand to track and help to resolve any technical or toolset licensing issues that are preventing you from migrating to the Cloud successfully.

Expert Cloud knowledge

Your IT team knows your organisation, your applications and services, and how you use them.

Furthermore, you will have spent time evaluating public Cloud services either by getting hands on with them, or you may have previously taken a CloudPlan® assessment from CDW to help you decide which Cloud service is right for you.

Either way, the prospect of migrating your applications may seem daunting and you may not know which tools or migration methods are the best.

CDW has helped hundreds of customers to migrate thousands of workloads to both the public and our own ServiceWorks private

Cloud platform. Our tried and tested tools and methodology can significantly reduce the time, cost, complexity, and risk of adopting AWS' range of services.

Removing barriers to the Cloud

We will share our Cloud migration knowledge with your IT team and will provide support throughout your migration to AWS.

This benefits you in two ways: Your IT team gain new and invaluable skills, and you benefit from the strong commercial relationships we hold with carefully selected and trusted software vendors.

An assisted migration can help you to transform the way that your organisation works by enabling you to benefit from the efficiency and scalability of AWS without worrying about the performance or stability of your critical applications and data.

Migrate Cloud, physical, and virtual workloads to AWS

CDW can help you to migrate workloads no matter where or how they are hosted, on everything from legacy hardware through to another public or private Cloud service.

The tools that we configure for you can migrate without causing interruption to your day-to-day operations, often with near real-time replication and the smallest of cutovers. This gives you the ability to migrate and test your workloads in less time, drastically reducing your journey to the Cloud.

Migrate more in less time

Our methodology makes it possible to migrate application, service, and database workloads by lifting and shifting them to AWS rather than redesigning them to

run using Platform as a Service (PaaS) offerings which saves time, expense, and complexity and can prove valuable in cases where workloads need to be migrated quickly or at scale.

Cloud planning & right-sizing

If you have a complex or diverse environment, or in cases where a third party has been managing your Data Centre for you, a CloudPlan® by CDW's Cloud experts can help to save time by assessing the current state of your environment, and giving an insight into how you can prepare for your migration to AWS thanks to application dependency mapping.

In addition to highlighting how key applications and services communicate with or rely upon each other, CloudPlan® can give you an indication of the costs of running your workloads AWS and can further help you to improve application performance by suggesting appropriate sizes for your Cloud virtual machines.

Supporting your migration to the Cloud

Throughout your migration to the Cloud, CDW will be available to provide expert technical support and guidance, and can help you to deal with changes to your migration project such as scope or scale.

Where you need technical support with your migration tool, CDW will be able to investigate and resolve issues quickly, escalating them to software vendors and leveraging our relationships with them.

Your migration partner

We are proud to be an AWS Advanced Consultancy Partner which is testament to our abilities, the wealth of knowledge, and the level of trust we have gained from designing, deploying, and

managing cutting edge public Cloud services for customers across all sectors, all round the world.

Share your Cloud journey with us

In addition to helping you migrate your workloads to AWS, CDW offers a range of services that can help you to plan your Cloud transformation, build a ready to run AWS environment, and provide a range of award-winning managed services designed to meet the needs of your organisation from cost optimisation through to fully-managed public Cloud services, 24 hours a day.

Ready for your next step?

Speak to us or contact your Account Manager to learn more about the services we offer for AWS and how we can help you at every step of your journey to the Cloud.
