## Pricing structure

---

This pricing schedule contains details of the Disclose pricing structure. It is not exhaustive. Details of the specification, dependencies and constraints of the Services provided are given in the Service Description document.

Disclose is based on a per capita, per annum pricing model. This model considers costs to NECS of running the tool. Third party costs currently relate to both hosting and governance support.

This cost includes:

- The cost of implementation (set up and deployment) services
- Full-service support (see Service Definition document)
- Training in the use of Disclose (2 virtual sessions)
- Hosting
- Product Manufacturer governance

This cost does not include:

- Import of existing data from another system: this is available at a one-off flat cost of £621.33

Prices are subject to an increase which will be in line with the official rate of inflation in subsequent financial years.
