making technology *human*

boxxe makes the global workplace habitable from a technological and human perspective. One does not overrule the other. They function efficiently and effectively together.

We believe in reciprocal adaptation: adapting technology to people and people to technology.

We aim to make organisations the best they can be through technology and by giving every person, wherever they are in the world, the confidence to use that technology to drive efficiency and effectiveness in every aspect of their working lives.

How can we help to make you the best you can be?

| Keeping you *connected*

Rapid and profound technological change is one of the most potent factors shaping the modern world. It creates significant opportunities but also gives rise to significant threats.

New risks emerge every hour of every day and connecting to the Internet opens the possibility of a hacker targeting your organisation.

It is therefore vital that you have an environment where you can safely access internet content without putting your organisation at risk.

stay secure with DOBUS™ - **boxxe's MoD-Accredited content delivery platform**

SAFE and Secure procedure for procuring and verifying online content from any vendor

INDEPENDENT secure system off the internet, creating a safe environment

STORAGE for data classified as Official/Official sensitive to Top Secret

SECURE network design and delivery with high availability

Introducing DOBUS™ our trusted content delivery system.

DOBUS is a high-availability, trusted content-delivery system that can help reduce risk of your eco-system being compromised when you need to reach out for new content.

Housed in a secure vault to offer you the highest levels of MoD accredited protection, the DOBUS platform sources content direct from the publisher, fully vets and cleanses the package and transfer via a one way diode to a high security area. From here you can access the content directly, greatly reducing the risk of contamination as everything comes from a single reliable source.

It works without an internet connection or even when you're under attack. This enables you to protect and rebuild your system if compromised.

How DOBUS™ works

DOBUS™ gathers data, patches, updates and bug fixes direct from publishers, manufacturers and approved online vendors via secure links.

It carries out thorough checks for viruses, malware, suspicious coding and any other faults or signs of interference. Once we are certain the patches and updates are clean and authentic, they are made available for distribution to relevant parts of your organisation through one of three options:

CONNECT

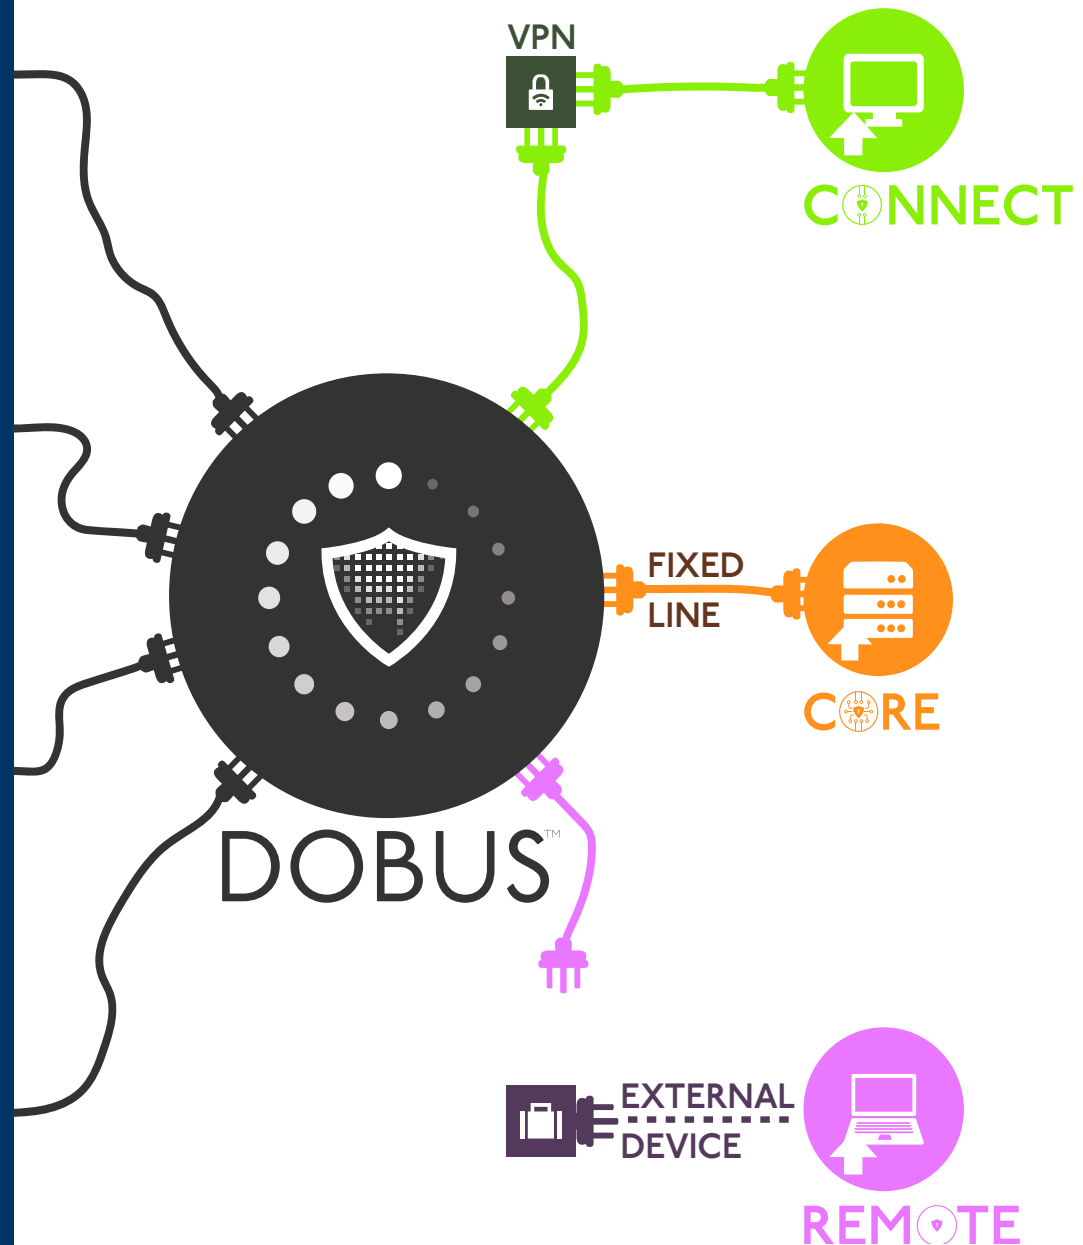

Delivering to you direct via secure VPN tunnel

CORE

Delivering to you through a direct fixed line

REMOTE

Delivering the updates direct via a hard copy

| How DOBUS™ can be used

DOBUS can be used in a multitude of ways, here are a few examples of how it can become part of your security playbook

Secure Patch Delivery

We can gather patches, updates, and bug fixes direct from any publishers and manufacturers so that you can keep up to date with your patch management program, protecting and optimising your software, systems, and applications.

Firmware Provision

Just like patching we can securely source firmware updates, ensuring you can continually optimise your hardware.

DevOps Enablement

DevOps helps you to achieve digital business transformation and rapid delivery of high-quality software and IT solutions. However, a crucial part of this process is building an artefact repository software development process. Accessing your artefacts through DOBUS gives you a safe, secure alternative to remote repositories. Such as NuGet, Python & Github

Deployment tool integration

Integrate with existing deployment tools such as IBM Bigfix providing patches directly into your systems ready for deployment

URL Replication

Fully replicate important sites offline to be accessed anytime, even without an internet connection.

Threat Intelligence feeds

Time is of the essence when dealing with malware threats and cyber-attacks. The longer these threats are left exposed, the greater the damage they can cause. DOBUS can access any feed you need, gathering the data into a single location for you to access.

Offline Authentication

Services need to check in periodically with the internet typically for licence authentication, this can be problematic in offline networks. With DOBUS we have a solution and are able to broker the connection without compromising the security of the network.

Critical Vulnerability Response

All modern software contains vulnerabilities, normally the risk of these are low and can be resolved as part of a normal patch management cycle. However, in some instances the impact of the risk is so high that work is required immediately to resolve the issue. DOBUS can give you access to critical patches in order for you to minimise the risk of them being exploited.

Secure Digital Library

Sometimes you need to be able to access content such as technical specs or schematics anywhere in the world, even without an internet connection. DOBUS can be used as a secure storage area for important documentation without exposing it to the internet.

unleash extraordinary change

boxxe exists to **enable** organisations to be the best they can be through the use of **technology**.

We give every person, wherever they are in the world, the **confidence** to use that technology, to drive efficiency and effectiveness in every aspect of their working lives.
