

Cloud Portfolio Management

AtkinsRéalis

What We Do

AtkinsRéalis understand that exploiting the full potential of Cloud computing requires a broader focus than just technology. AtkinsRéalis Cloud Portfolio Management Services support organisations to optimise investments to balance customer satisfaction, governance, operational efficiency, innovation and accelerate adoption.

Our five phased approach, grounded in Management of Portfolios (MoP) and IT Infrastructure Library (ITIL) service portfolio management, creates a balanced portfolio aligned to strategic objectives. We work with organisations to understand their strategic objectives and how these relate to Cloud adoption gathering data to assess the current Cloud services, workloads, and assets. We support prioritisation within portfolios to maximise resources and deliver early benefits, supporting adoption with execution planning, using project health metrics and feedback loops to maximise benefits realisation.

AtkinsRéalis assesses portfolios using six lenses, ensuring that people and processes are considered alongside technology. We assess Cloud strategy including multi-Cloud adoption, workload exit and migration ensuring service continuity if product support is discontinued, and change management approaches. We consider governance, and risk and compliance, balancing innovation and commoditisation whilst maintaining resilience, security compliance, data protection and data residency. We include financial and asset management, pivoting from capital to elastic revenue expenditure. We assess delivery methodologies, pivoting from project to product management, blending Agile delivery with traditional investment stage-gate control, supported by workforce planning for make-team-buy strategies to equip organisations with the skills to design and manage Cloud into the future.

Why us?

AtkinsRéalis has deep expertise in portfolio management in Cloud and other technology environments. We have extensive experience assessing, building, optimising, and delivering portfolios of work for Cloud services across UK Government departments including Defence, Intelligence, Law Enforcement and Critical National Infrastructure

AtkinsRéalis has a team of highly trained and experienced Portfolio consultants trained in MoP and ITIL and Cloud technologies with years of hands-on delivery across many sectors. Our portfolio services are vendor agnostic when it comes to Cloud technology adoption. Our consultants' work and recommendations are evidence based and unbiased focussed on delivering the best outcomes for organisations.

Our people and teams comprise outstanding individuals, who are focused on working in partnership with organisations. We don't just map a strategic pathway; we do the hard yards to turn the vision into reality.
