Cloud Data Analytics & Visualisation

AtkinsRéalis

What We Do

Our Cloud Data Analytics & Visualisation services are tailored to each organisation's individual needs, helping turn Data & Intelligence into business value at scale. We ensure that we bring clarity to data resources, providing clear definition, interpretation and context to the information that is used to shape discussion and inform decisions.

Data Analytics

Make quicker and better-informed business decisions through a comprehensive understanding of your data. From benchmarking performance to forecasting what is going to happen next, our team will help guide clients along their data discovery journey to reveal valuable insights quickly and efficiently including descriptive diagnostics and prescriptive analytics.

Interactive Data Visualisation

Explore data through visual storytelling to communicate insights. Our human-centred and agile prototype development approach enables intuitive data exploration and insight generation.

Data Landscaping

Data Profiling & Data Quality Improvement. As data volume and variety increase, the need to understand and summarise data from different repositories is vital to create insights. Understanding the data generation process and analysing the source data provides a clear view of data quality. AtkinsRéalis will support your data maturity journey to achieve your objectives.

Data Requirements Management

Ensure alignment between strategic priorities and data projects through efficient eliciting and managing of data requirements. Our approach promotes a clear end-to-end focus by joining up requirements and objectives from discovery to delivery.

Data Process Analysis

Gain an understanding of data processes, through a review of the components of a process, including inputs, outputs, procedures, controls, actors, applications, data, technologies and their interactions to produce insight.

Cloud Data Analytics & Visualisation

AtkinsRéalis

Why us?

With 100+ Data SME's under a technology transformation business unit with 300+ staff, several client tailorable frameworks and methods and significant experience in the Private and Public Sector; Our approach to Data Analytics & Visualisation is oriented towards your business benefit and encompasses business, process and technology enablement to ensure your organisation is ready to leverage the data opportunity.

Our expertise in delivering impactful analytics through meaningful visualisation is founded on the principle that any graphical representation of a metric must show its magnitude, momentum and mix clearly and unambiguously. Rather than just handing over a data solution, our experts provide tailored-solutions to the needs of your business, providing clear insight, and then embed it within your organisation's culture and processes.

Our Accelerators:

Build quick data visualisations and generate insight

Make data better suited to serve enterprise needs through process and system improvements
