

Well-Architected Cloud Optimisation

Valuable insights across all pillars of the Azure Well-Architected Framework.

What to expect

By taking advantage of our Azure Well-Architected Cloud Optimisation Review, you will obtain a fast, simple, and high-level view of the status of your cloud environment ran by one of our Senior Technical Architects.

Understand the security standards you work towards (e.g., CIS, NIST). We then leverage our advanced tooling to identify risks across your environment, offering advisories and recommendations to enhance your security posture

Analyse your current Azure expenditure patterns, ensuring you're getting the most value from your investments and suggesting cost-optimisation strategies.

Evaluate your operational procedures, deployment practices, and monitoring capabilities. We provide guidance on best practices to ensure smooth operations and continuous improvement

Assess the efficiency of your Azure resources. We'll provide insights into how you can optimise performance, ensuring your solutions are scalable and responsive

Examine the resilience and availability of your Azure infrastructure. We'll highlight potential vulnerabilities and offer strategies to enhance system reliability and uptime

Minimising the environmental impacts of running cloud workloads

Workshop timeline

Our Cloud Optimisation Assessment typically takes x2 weeks.

Information Gathering

Once access has been granted, we work with your teams to understand the security standards you work towards (e.g. CIS, NIST)

Information Analysis and Review

We review your environment using our powerful tooling to gather all the seen risks

Technical Clarification Workshop

Report generated and presented back to your key stakeholders highlighting immediate high priority risks

Strategy

Plan of action generated by one of our senior architects to help solve those risks

Why choose Logicalis?

"We typically identify at least 20% in potential cost savings for customers and can plan a strategy to improve Azure Security Scores to 80+. Set up is quick and easy."

— Head of Cloud, Logicalis
