

Digital Workplace Assurance

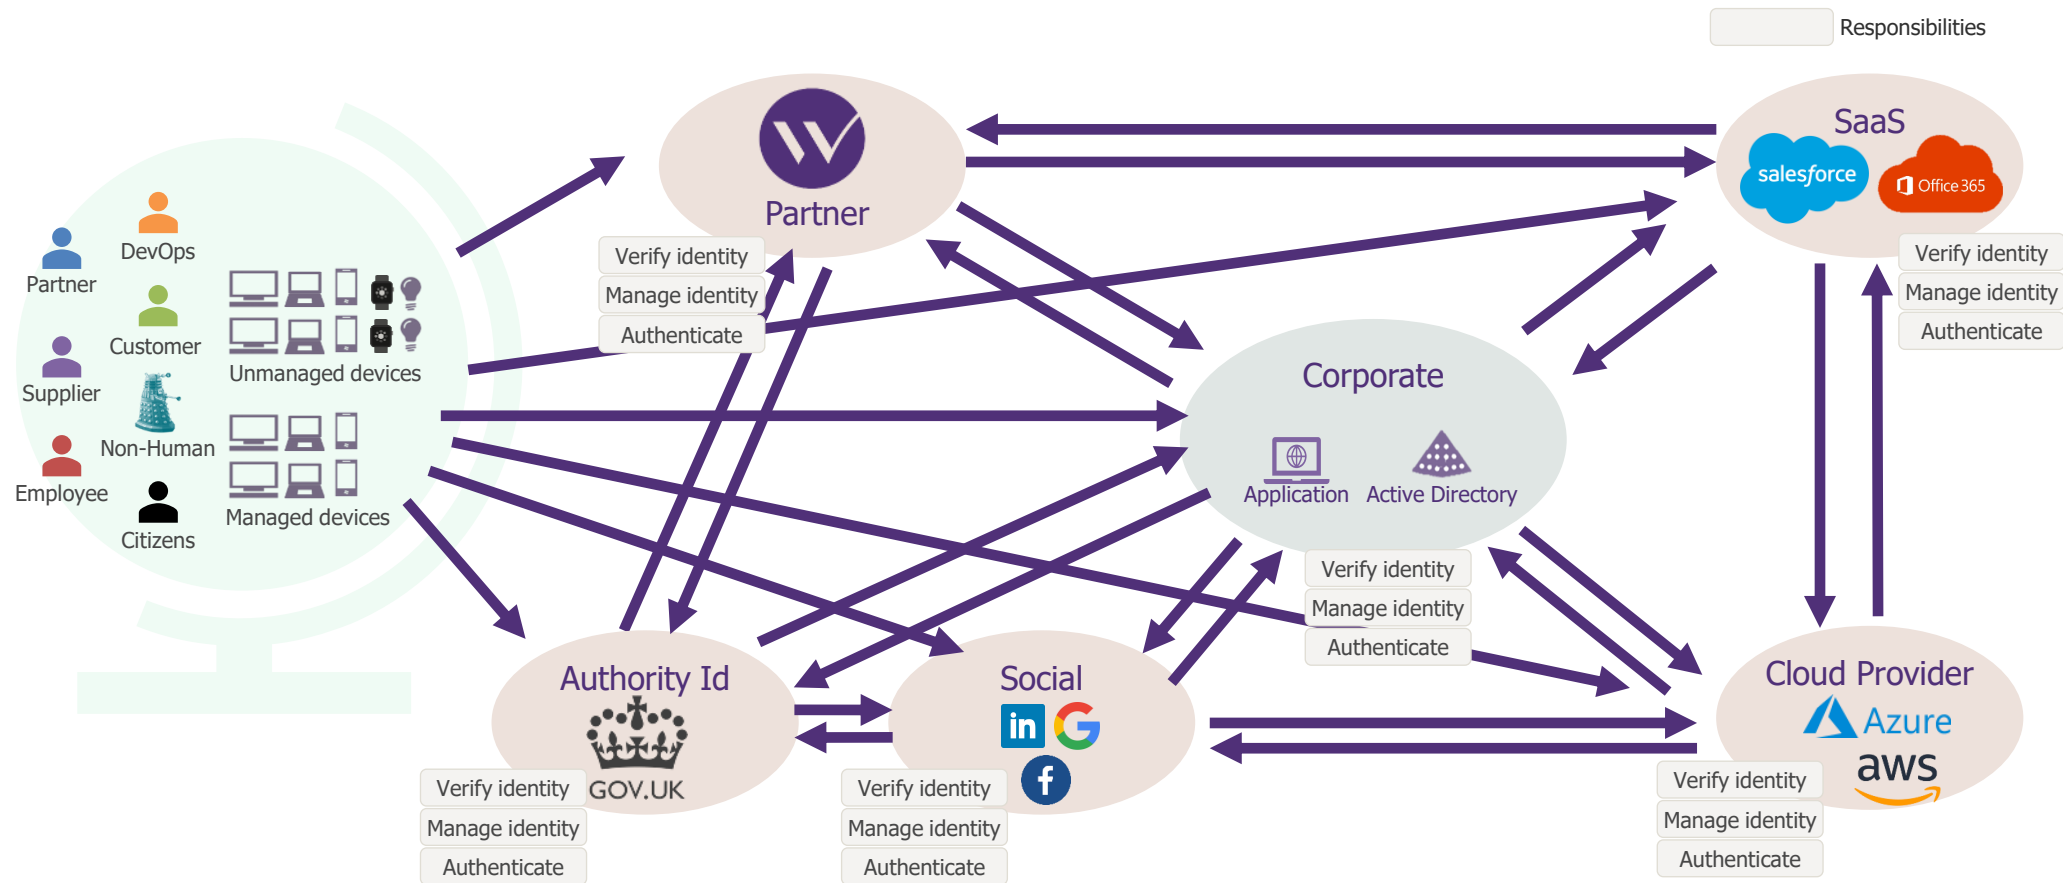

G-Cloud 13

April 2022

The workplace of the future needs to deliver against multiple objectives...

In practice, it is a complex landscape with a mix of users, devices, locations, organisation.

Main risk of pain, from this complexity: a “clunky” and lengthy onboarding process and a nightmare for operations, from workstation to application management. And it barely works: poor user experience (different machine, account, yet another password...), and what level of security?

Solutions to be customized based on targeted business needs

Business Continuity Plan

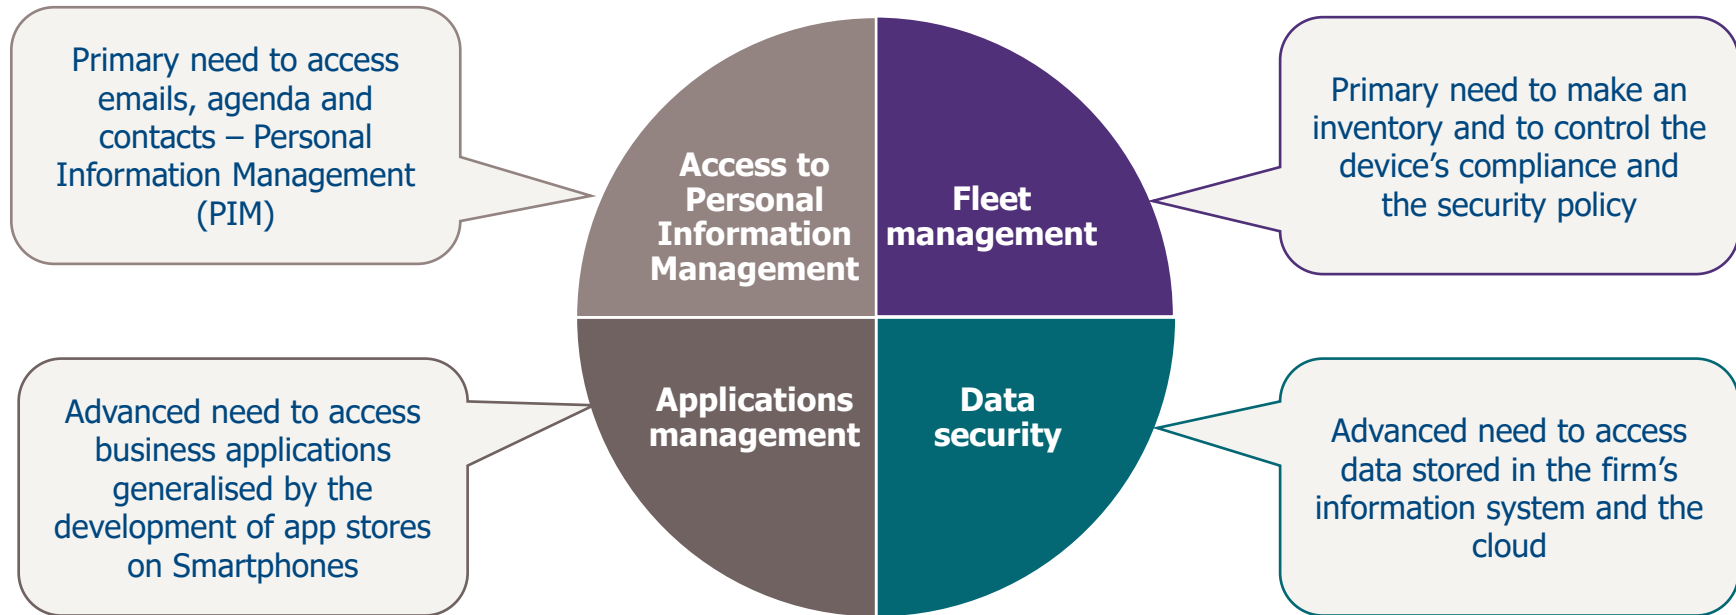

Principle: provide a work environment for users in the event of a disaster at a work site
