

TRANSFORMING DIGITAL HEALTHCARE

Successful implementation maintains safe patient care whilst achieving benefits from your digital investment

As leading experts in digital transformation, we have partnered with over 150 healthcare organisations on successful implementation programmes. Agile and responsive, our complete capability approach – people, process & platforms – is focussed on positive outcomes.

The right activity at the right time, in the right way

CAPABILITY

Skilled, complementary, scalable, multidisciplinary

KNOWLEDGE SHARING

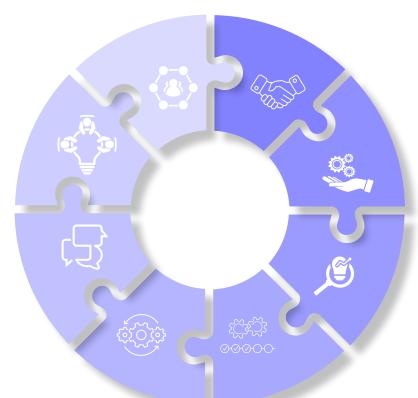

Competence, confidence, adoption, sustainability

COMMUNICATIONS

Awareness, motivation, engagement, ownership

WORKSTREAMS

Design, planning, management, integration

COLLABORATION

Partnership, proactivity, transparency, ethics

GOVERNANCE

Expert programme and project management, PMO

INSIGHT

Lessons learnt, dependencies, risks, benefits

BEST PRACTICE

Control, assurance, readiness, timeliness

Why Ideal Health?

Our specialist teams bring skills, experience and lessons learnt from numerous successful health system implementations across the NHS, including over 40 EPR deployments.

This expertise enables us to provide you with the best possible support.

We complement and enhance the capabilities of your own teams to help navigate complex digital implementations and realise positive benefits.

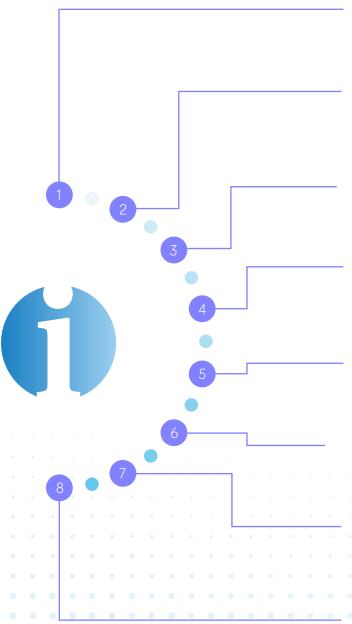

TRANSFORMING DIGITAL HEALTHCARE

Our highly-skilled and experienced implementation teams cover every aspect of digital health implementation, through our 8 key implementation services:

PROGRAMME MANAGEMENT

Delays to a digital programme can cost healthcare organisations millions of pounds. We ensure timely and effective delivery of your complex digital programmes, whilst aligning with your organisational strategy, giving you control and focus on benefits realisation and ROI.

PROJECT MANAGEMENT

From strategic projects to full EPR implementations, our team works with you to establish the best methodology for your project. We provide support and a safe pair of hands during the project lifecycle and ensure all key deliverables are correctly managed, securing a successful outcome for your project.

PROGRAMME GOVERNANCE/PMO

Correct governance and control can identify problems early, minimising the cost and reputational impacts of delays to the programme or project. Our consultants are experienced in new PMO set up and in improvement of existing governance procedures.

TECHNICAL READINESS ASSESSMENT

We assess the Trust's As-Is and To-Be integration, reporting and end-user infrastructure environments. This significantly improves the precision of the business case for a system acquisition and provides clarity and accuracy for the resulting implementation plan, reducing both your financial and resource costs.

INTEGRATION

Our consultants minimise the impact of your new or upgraded EPR, workflow change or new departmental system on your Trust's integration design and infrastructure. Systems are integrated smoothly to reduce risk and maintain patient safety.

Testing supports your journey to a stable and usable EPR or health system. Our industry-leading test teams provide accurate classification and characterisation of test issues and effective management to resolution, ensuring your digital investment delivers as contracted.

REPORTING AND /BUSINESS INTELLIGENCE

Understanding how change will impact an organisation's reporting and analytics environment is an essential element of technical readiness. Our consultants understand the importance of reporting and develop a full analysis of the To-Be reporting environment to increase capability and efficiency.

END USER INFRASTRUCTURE

Our end-user infrastructure assessment alerts Trusts of potential issues that could prevent a successful go live. It supports business case development and provides a close relationship between implementation planning and activation support, to ensure a smooth go live
