- ❖ Customer can leverage Computacenter's Innovation Centre to explore technology options
- ❖ Experienced in infrastructure, application, and security use cases
- ❖ Gain support through the full journey of observability adoption

DYNATRACE ADOPTION SERVICES

OVERVIEW

Our Experience

Computacenter have built substantial experience over the last five years in helping our customers to create the cultural and technological foundations required to succeed with their Observability initiatives. Whilst every customer engagement is unique, there are common patterns to improving Observability maturity that we undertake on behalf of our customers. These patterns include organisational change, with the creation of new team structures, to bring development, security and platform stakeholders together with the business, eradicating barriers to collaboration. Another frequent pattern is the consolidation of software associated with development and operations lifecycle technology sprawl, which creates unnecessary cost and friction in software and service delivery processes. We have supported numerous programmes of this nature, improving customers observability across their clouds, applications and end users experience.

Why choose Computacenter?

Computacenter have vast experience in working with Enterprise organisations and count many of the UK's most high profile public sector and commercial organisations as customers. This Enterprise experience is essential in supporting our customers with Observability maturity. Driving organisational and technological change within large, complex team structures is hard; it requires deep understanding of how to approach and engage stakeholders to ensure new concepts are implemented and adopted by the organisation successfully. Many organisations do not deliver programmes of this nature on a regular basis and as such, our experience is a valuable asset. In addition, we have substantial capability across a number of different competencies; applications and software, private cloud, public cloud, security and compliance. We are therefore very well equipped to support customers on all aspects of Observability. Finally, we are a key partner for many of the leading monitoring, APM, and FSO technology vendors and we therefore understand the skills required to use these tools effectively.
