DEVOPS REVIEW & ASSESSMENT

OVERVIEW

Service Description

Experienced DevOps consultants assess 1 or more engineering team's DevOps capability and maturity level based on the industry standard DORA framework. We combine a questionnaire with analysis of the existing tooling and codebase. This combined assessment yields both behavioural and attitudinal data, used to deliver a targeted DevOps improvement plan.

Key Features for our Customers

- ❖ Designed to scale across large development communities
- ❖ Combines opinionated and empirical data for a more robust analysis of capability
- ❖ Concise and simple questionnaire
- ❖ Can be run against a variety of version control systems
- ❖ Applies DevOps best practice
- ❖ Informative report on current capabilities, gaps and ordered steps to achieve measurable improvements
- ❖ Delivered by an experienced team of Analysts and Engineers, with activities managed by a dedicated Project Manager

Key Benefit for our Customers

- ❖ Collection of behavioural and attitudinal data
- ❖ Simplified and scalable through automated analysis of tooling and codebase
- ❖ Clear perspective on current DevOps maturity and benefits of improving
- ❖ Trusted advisors with real-world experience
- ❖ SC and DV cleared consultants (as required)
- ❖ Defined improvement plan for maximising benefits and scaling DevOps
- ❖ Engagement in partnership with client

DEVOPS REVIEW & ASSESSMENT

OVERVIEW

Our Experience

Computacenter have built substantial experience over the last five years in helping our customers to create the cultural and technological foundations required to succeed with their DevOps initiatives.

Whilst every customer engagement is unique, there are common patterns to container platforms maturity that we undertake on behalf of our customers. These patterns include organisational change, with the creation of new team structures, to bring development, security and platform stakeholders together with the business, eradicating barriers to collaboration. Another frequent pattern is the consolidation of software development lifecycle technology sprawl, which creates unnecessary cost and friction in the development and deployment process.

We have supported numerous programmes of this nature, increasing the velocity with which development teams can operate, increasing deployment frequency and reducing lead time for change.

Why choose Computacenter?

Computacenter have vast experience in working with Enterprise organisations and count many of the UK's most high-profile public sector and commercial organisations as customers.

This Enterprise experience is essential in supporting our customers with DevOps and Container platforms maturity. Driving organisational and technological change within large, complex team structures is hard; it requires deep understanding of how to approach and engage stakeholders to ensure new concepts are implemented and adopted by the organisation successfully.

Many organisations do not deliver programmes of this nature on a regular basis and as such, our experience is a valuable asset. In addition, we have substantial capability across a number of different competencies; applications software & platforms, private cloud, public cloud, security and compliance. We are therefore very well equipped to support customers on all aspects of Container platforms adoption.

Finally, we are a key partner for many of the leading Kubernetes technology vendors and we therefore understand the skills required to use these tools effectively.
