- Risk-Based Authentication
- Unstructured Data Governance
- Cost Reduction via Automation
- Integration with Existing Infrastructures
- Expertise in IAM Solutions

OVERVIEW

Our Experience

Experience based discovery

Customers face challenges in their software supply chain, such as high costs of legacy software licensing and maintenance, drawn out procurement cycles that inhibit innovation, and a lack of visibility into organisational software usage.

Organisations are looking for simplification and innovation in the way they procure software. They want to buy more relevant software from fewer providers or places

Marketplace gives customers the ability to find, test, source and manage third-party software, services, and the data that they need to build solutions and run their businesses almost instantly.

Why choose Computacenter?

Computacenter understands that via Marketplaces customers can unlock innovation when they have the tools to tailor software discovery, procurement, and provision to the needs of multiple teams across their organisation.

Computacenter can help you to optimise the way you consume Marketplace services by facilitating enterprise level agreements to negotiate wholesale pricing, providing expert guidance across multiple hyperscalers to ensure consistency using governed procurement processes to drive agile deployments of applications in a controlled manner.
