Automation Technology Services

esynergy

Esynergy's automation and technology service comprises of Technical, assurance and design expertise to build cloud native services using a cloud-first automated approach to software development. Adopting scalable, immutable SaaS models on a microservice-based architecture. We provide training and redeployable agnostic delivery models to realise tangible value and deliver outcomes.

Service Features

- Rapid engagement utilising pre-formed teams
- Consultants with in-depth understanding of Government digital services
- Bespoke built microservice platforms
- User-centred (UCD) systems built based on user-needs
- **Support many cloud service providers – AWS, Azure, GCP,** Openstack, UKCloud
- Scalable and maintainable platform services
- Technical and non-technical analysis
- Discovery, Alpha, Private Beta, Public Beta, Live
- Combine a human-centred design methodology with a sprint format
- Rapidly develop and validate a prototype solution

Service Benefits

- Cloud agnostic solutions deployable on all public hyper clouds
- No hardware or maintenance costs.
- Minimising upfront costs paying per instance (pay-as-you-use)
- Scalable solutions that flex availability according to demand
- Cost-effective rapid iterative delivery
- Fully developed platforms meeting user needs with high adoption rates
- Start with the essential user needs, minimum viable product (MVP) methodology
- Product-centric delivery model to demonstrate value to stakeholders
- Continuous stakeholder engagement helping to realise the correct outcomes
