

# Higher Education: Testing Services For Clearing

## Service Description

Clearing is an intense business period where huge loads are placed on the telephony network, internal infrastructure and social media platforms for UK Universities. It is imperative that all communication channels, including call handling and messaging, work flawlessly as success (or failure) of this process can have a significant impact on student recruitment and therefore future funding.

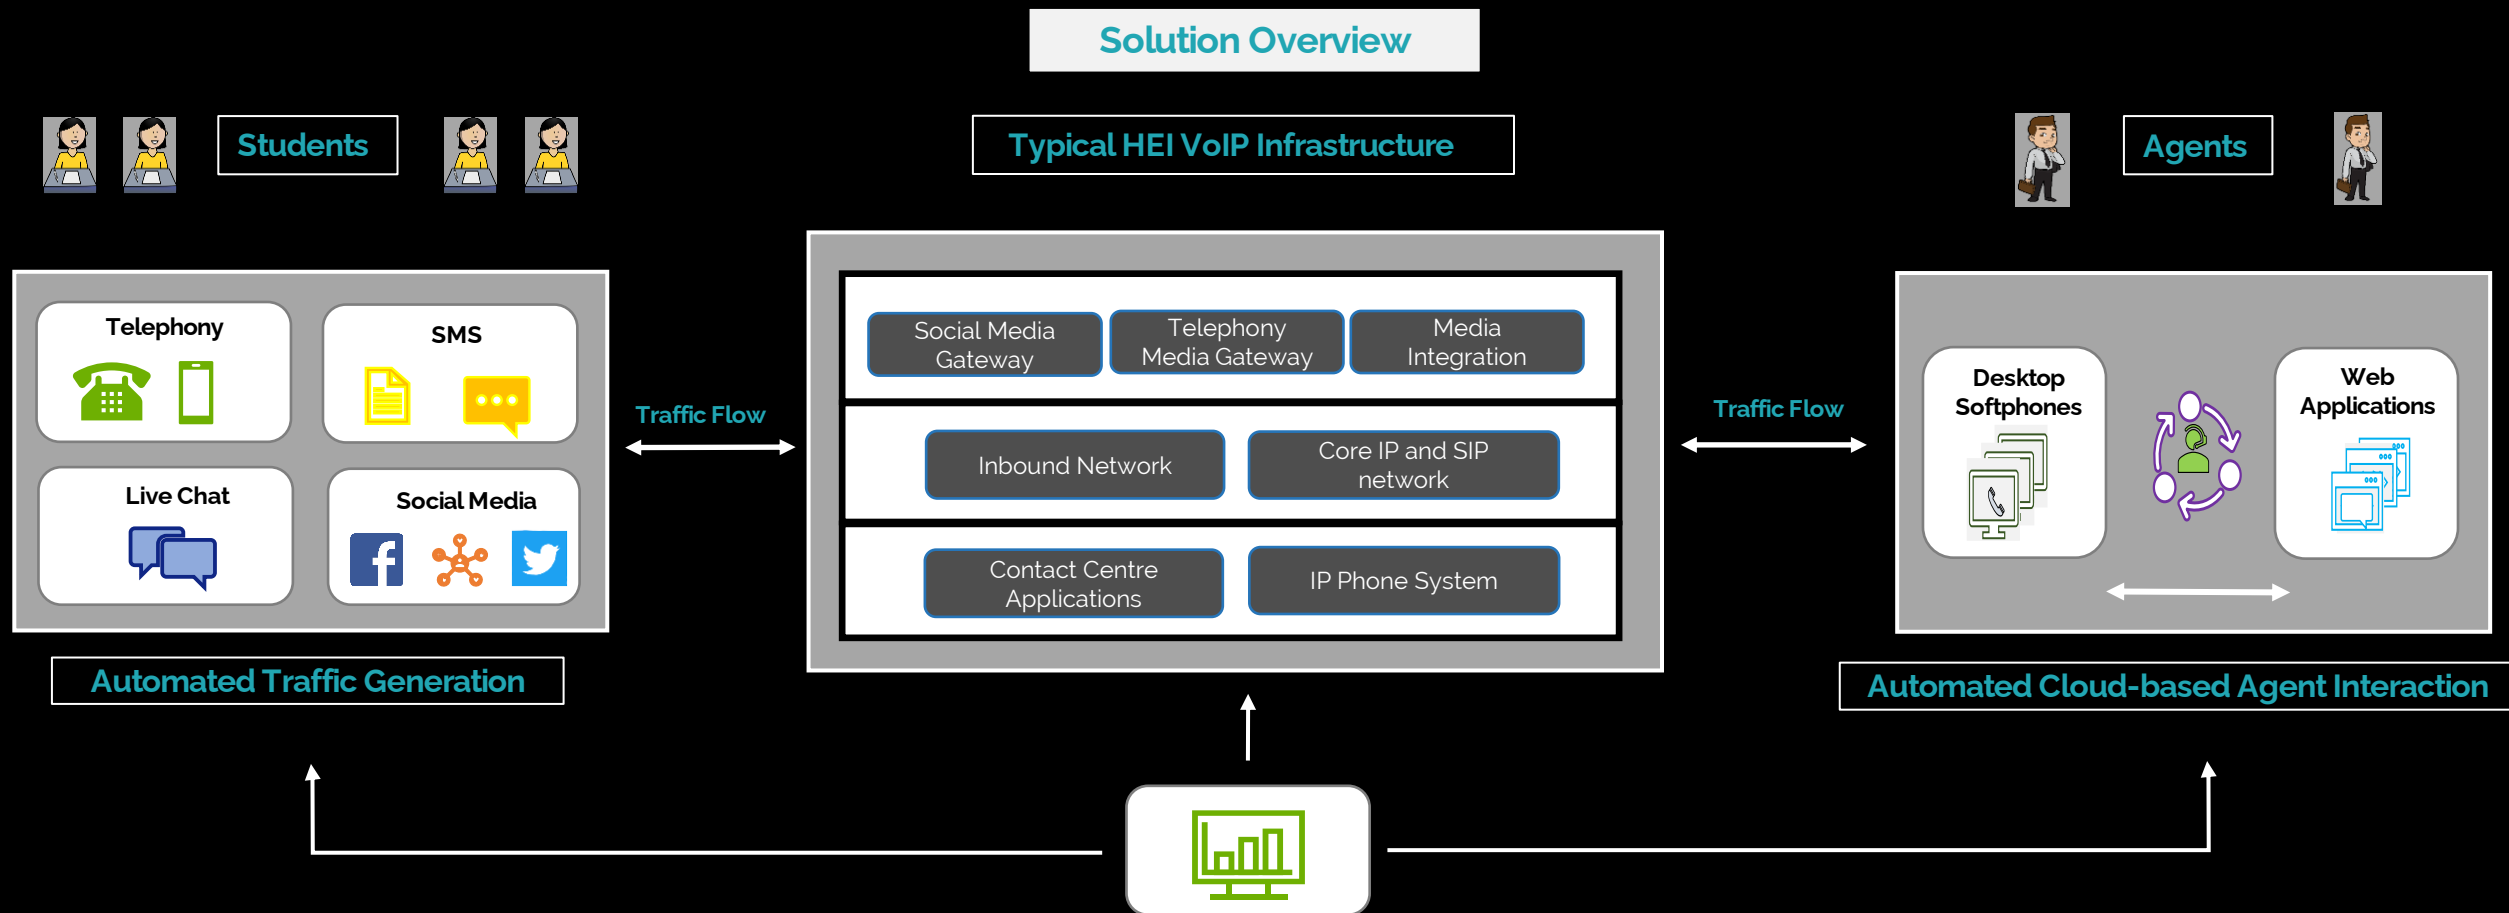

It is not enough to simply implement high capacity and resilient voice platforms and cutting-edge multi-channel technology, these platforms must be tested and tuned to optimize performance via identifying and resolving performance bottlenecks across the end-to-end technology estate.

This testing will ensure that lost calls are minimized, student engagement increased and student recruitment optimized – all essential factors in meeting your business objectives for clearing within hours of day 1 of Clearing.

Infuse offers a proven, **end-to-end test service for clearing** with the following features:

- Our service offering is based on a proven methodology and cutting-edge tools, delivered by our expert load test team.
- It will provide full channel coverage against realistic scenarios, driven by e2e automation.
- Our comprehensive KPI and results analysis capability will lead to clear fault diagnosis and resolution steps.
- Ultimately your Clearing System will be validated as performing successfully under the anticipated load during the Clearing timeframe ensuring there will be no system downtime or dropped calls.
- The **objectives** of the Test Service include :
  - Verify that the system performance & functionality under load within the infrastructure performs as expected
  - Validate the significant traffic generated from social media from students is realisable and measurable
  - Validate that there is a seamless and holistic customer experience across multi-media omni-channel customer journey
  - Automate the end-to-end journey so real agents are not required during testing
  - Ensure there is no downtime as a result of excessive loads

# Higher Education: Test Services For Clearing

## Description

- Test tool simulates SIP client with RTP and support up to 1000 calls per second
- The test tool comprises:
  - Desktop based client - where test cases and sub task are configured with SIP message data / parameters
  - Cloud based server – to generate the load towards target systems

## Comprehensive KPI Monitoring

- Multiple KPIs supported with monitoring facility ;
- Client registration and time
  - SIP messages and responses count, time, frequency
  - Call setup, wait , sub-task graphs, time variation, transactions per seconds

The setup from carrier making real calls and creating real traffic from SMS, livechat and SM going though the HEI infrastructure and then building AWS agents in the cloud

# Higher Education: Testing Services For Clearing

## Service Features

- **Holistic Customer Experience Measurement:** our solution is able to validate multi-media omni-channel set up of Clearing center.
- **End-to-End Automation Approach:** our solution can use real calls from external operators to generate the telephony traffic.
- **More realistic scenarios:** Our real call traffic model has been designed with various call duration times and simulating different agent conditions e.g call hold.
- **Full test coverage:** In order to have full coverage of tests related to call counts and queue capacity, we deploy multiple traffic models to test with **average** as well as **peak** traffic.
- **Know the performance limitation:** With our unique strategy and approach, your business will understand the performance response/limitation under load , technical and user experience challenges which can be proactively managed prior to Clearing.
- **KPI measurement:** Our delivery gives measurable outcomes that will enable you to ensure the system meets the standards and measure actual strength in meeting Customer satisfaction internally and externally so you can plan for the following year.
- **Reusable Assets:** Repurpose the assets from this engagement to re-use in re-tests the following year and for regression testing any updates and upgrades of your softphone systems network.

## Business Benefits

- Telephony and multimedia channels work flawlessly under high load during clearing.
- Dropped calls and wait times are minimized during clearing.
- Increased student engagement with student recruitment opportunity maximized.
- Zero outages mean you can potentially enroll than planned
- Valid the issues with your external suppliers before starting Clearing
- Avoid reputational damage from Clearing telephony issues

## Partners & Clients

### Our Higher Education Clients

### Our Partner Ecosystem

## A Selection Of Our Higher Education Projects & Benefits

Client	Project Brief	Infuse Services Provided
University College London	Tribal SITS-to-Cloud project to manage, plan, implement testing strategies, tools, automation and frameworks around functional, non- functional testing across the test lifecycle. Enhance the UCL team <b>Benefit: Automate 90% of testing and reduce regression testing on SITS to under 5-hours</b>	Test Management, Functional Test Delivery, Continuous Testing, Performance Engineering and NFT
King's College London	Managed services across several projects: VLE, ERP, Access systems,, R&D, Curriculum, LMS, CRM and Student lifecycle. <b>Benefit: 40 projects since 2018; saving 35% on testing costs since start of work</b>	Development Lifecycle Review, Test Management, Functional Test Delivery, Continuous Testing, Performance Engineering and NFT
University of East Anglia	Managed services across several projects: Admissions, Curriculum, Tribal SITS, Tribal SITS-to-Cloud and Test Strategies. <b>Benefit: Automated 200 tests across SITS and reduce regression testing to 3 hours</b>	Test Management, Functional Test Delivery and Continuous Testing,
London Southbank University	Architecture and Test Lifecycle support for LSBU's LEAP programme encompassing the rollout of Salesforce, ESB, Identity management and a new cloud-based student record system since 2020	Architecture Review, Full Stack Development, Test Management, Functional Test Delivery, Continuous Testing, Performance Engineering and NFT
Queen Mary University of London	Re-architecture of the Moodle environment on Azure and performance testing of the clearing process and telephony systems (functional and non-functional) simulating 400 call agents since 2020. Testing of WiFi network throughout the university <b>Benefit: Mitigated issues that would have stopped 75% of calls getting to the clearing agents 2 years in a row</b>	Architecture Review, Performance Engineering and NFT
Edinburgh Napier University	DevOps maturity with recommendations in process of being implemented	ICM Assessment, DevOps roadmap, business case and transformation roadmap
University of Exeter	Performance Testing projects across VLE migrations and upgrades <b>Benefit: Mitigate issues related to Moodle during enrolment and exams during the Pandemic</b>	Performance Engineering and NFT
University of Aberdeen	DevOps (ICM) transformation assessment, test automation POC and tool chain assessment for Applications Management team	Infuse Capability Modelling/TMMi Model for DevOps
Anglia Ruskin University	Enterprise architecture consultancy around recommending integration roadmap of 100+ subsystems using Event Streaming	Architecture Review
University of Bristol	myERP the new integrated Finance, HR, Payroll and Procurement system Student Lifecycle Support Programme which will transform how students interact with the university <b>Save over £1m in testing costs across the programme</b>	Test Management, Functional Test Delivery, Continuous Testing, Performance Engineering and NFT
University of Bradford	Bradford are re-implementing Tribal SITS and have no test process, team or tools.	Test Management and Functional Test Delivery

<b>Video Case Study</b> Nov 2018	<u>University of Bristol - Video Case Study</u> <a href="#">Nigel Summers. Test Manager, University of Bristol (SLSP Program)</a>	Learn how the University of Bristol saved a significant amount in testing costs by using continuous testing

# Why Infuse ?

## Experience and Credibility

Established in 2002 with over 21 years of experience in software delivery and quality engineering consulting having helped successfully deliver over 500 projects around the globe.

We have successfully deployed test services on over 35 HEI clients so we understand your business drivers and ways of working. We have experience with systems such as Moodle, Tribal SITS, CourseLoop, SAP and have delivered services ranging from functional test delivery to test automation, performance testing, test environment management, and process optimisation.

We leverage experts across our practice to provide you with an end-to-end delivery capability from experienced test managers to scrum masters, agile coaches, architects, developers, and manual & technical testers.

All our resource are ISTQB foundation certified and bring expertise in testing together with experience and energy to quickly integrate with your existing team. We have a history of enhancing existing test teams to accelerate progress and are comfortable delivering within and managing a mixed team including in-house, contractor and third-party resource.

Our team are highly motivated and delivery focused, and will go above and beyond expectations to ensure the successful delivery of the test workstream. We have demonstrated our commitment to success on numerous previous test engagements.

We effectively deploy resource onsite, onshore and offshore on many of our engagements. Our experience of delivering from multiple locations provides you with a cost competitive proposition together with the ability to flex resource when required.

We have expertise across a wide range of innovative products from our own script-less test automation tool – useMango™ – to leading enterprise and open-source tools, through to our delivery accelerators.

# Company Overview

## Who We Are

- We are a team of 90+ engineers and consultants spread globally with a passion for modern software design, engineering and delivery.
- We possess deep expertise across Architecture, Agile, DevOps, Cloud Transformation, Quality & Performance Engineering.
- Since 2002, we have been helping companies of all sizes design, develop and deploy high quality software.
- Since 2018, we have been focused on supporting HEIs resolve their technology challenges as part of their digital transformation and cloud migration agenda.
