SAPPHIRE™

Threat Intelligence is Essential to Avoid Cyber Attack

Organisations are at threat from many and varied sources. Direct attacks against their organisation and IT infrastructure; becoming collateral damage following a cyber-attack against another organisation; attacks against their core business through brand impersonation resulting in customers being defrauded, damage to the reputation of their brand and consequently revenue loss, to name but a few.

Signal to Noise

The volume of security data combined with many differing threat intelligence feeds can be overwhelming for many organisations. In many cases, essential indicators of unwanted activity can be missed or incorrectly prioritised, wasting valuable time and resource. Not all threat intelligence offers credible, actionable information which an expert analyst has reviewed; instead, it is usually automated, containing vast amounts of raw data, diminishing any real value held within it. Our Threat Intelligence service changes that.

Actionable Intelligence

Our Managed Threat Intelligence Service monitors, investigates, alerts, and offers remediation against existing or newly emerging threats that can negatively impact any business, brand, or individual. Our service provides operational, vulnerability and brand intelligence to reduce an organisation's exposure to the activities of cybercriminals.

Our real-time intelligence data comes from an unrivalled quantity of sources across every language, enriched with credible evidence to improve reliability.
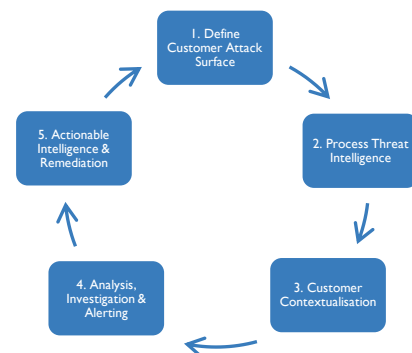

Our processes are embedded into market-leading technology platforms, enabling rich, rapid analysis for faster research, with customer-relevant advanced searches, alerting and reporting.

With immediate access to customer-contextual intelligence, we can assess risk and recommend actions instantly. Our Managed Threat Intelligence service provides 24 x 7 monitoring of threat intelligence events across any business operation, helping to make informed, risk-based decisions supported by rich evidence and expert analysis.

With coverage across multiple threat channels, including the dark and deep web, Sapphire also provides on-demand investigations backed up by take-down services to protect brand identity and reduce reputational damage, as well as identify credible threats before they happen – all with actionable intelligence.

Managed Threat Intelligence Lifecycle

Managed Threat Intelligence benefits

- 24x7 proactive monitoring across any business
- Protect brand identity
- Reduce reputational damage
- Identify credible threats before they happen
- Multiple threat channels analysed including the dark web
- On-demand investigations
- Threat take-down facilities
- Direct access to threat intelligence reports

Security Operations Intelligence
- Identify previously undetected threats
- Real-time exploitation analysis
- Global threat landscape monitoring
- Threat actor investigations
- Ransomware activity monitoring
- Supply chain and partner monitoring
- Identify indicators before exploitation
- Expert analysis

Vulnerability Intelligence
- Prioritise patching based on risk
- Tech-stack monitoring
- Real-time exploitation trend analysis
- Alert on vulnerability indicators before exploitation
- MITRE Framework mapping
- Active vulnerability exploit monitoring

Brand Intelligence
- Domain abuse monitoring
- Executive impersonation monitoring
- Social media monitoring
- Credential and data leak monitoring
- Brand attack mitigation
- Take-down services
- Brand, logo or product monitoring
- Brand impersonation monitoring

Our service is broken down into three simple offerings:

	Bronze	Silver	Gold
Weekly generic digest	●	●	●
Weekly specific report		●	●
Monthly specific report	●	●	●
Monthly analyst call		●	●
Phishing email aggregator		●	●
DMARC aggregator			●
Analyst ad hoc available 9-5 M-F			●
Max users	500	1000	2500

Bespoke offerings around these packages are available.
