

## **Cloud Software Services: Acquia Cloud IDE, Acquia Code Studio, Acquia Content Hub, Acquia Site Studio**

**Acquia Cloud IDE** - Acquia Cloud IDE is a preconfigured cloud based development environment. Developers can write code and use a command line interface all from their browser with no required setup. Integrating seamlessly with our other environments, Acquia Cloud IDE gets developers coding on day one.

**Acquia Code Studio** - Acquia Code Studio is a Drupal-optimized version of GitLab that provides you with the tools to plan, build, review, test, deploy, and measure. We own and automate the repetitive parts so that developers can stay focused on their DevOps lifecycle workflow.

**Acquia Content Hub** - Content hub is a cloud-based, centralized content solution that provides the ability to distribute and syndicate Drupal content and configuration. This enables enterprises to publish and reuse content across multiple channels, on their terms.

**Acquia Site Studio** - Acquia Site Studio is a low code solution designed to allow non-technical Acquia users to build sites and performed tasks that would often fall to developers, creating a burden on development teams. Low-code expedites development timelines and empowers business users to contribute.
