One Platform to help reduce costs, mitigate compliance issues, get new products to market quicker, accelerate transformation and much more.

Efficiency

Create and share process documentation quickly and easily, which can save time and reduce the risk of errors. Streamline the audit process, making it easier for auditors to identify and address any potential issues quickly.

Organization

Organize your process documentation in a logical and intuitive way, making it easier to find and use. Stakeholders have visibility of the audit process and any potential necessary changes, which can increase transparency and accountability.

Collaboration

Collaboration is facilitated between team members and enables them to work on documentation together in real-time. This can improve communication and coordination within the team and help ensure that all members are on the same page.

Compliance

Ensure the business is compliant with regulations and requirements by providing a clear and detailed record of how processes are carried out. Connect process definitions, work instructions/SOPs and controls for continuous compliance and regulatory requirements.

Integration

Integrate the platform with other tools and systems, such as customer support platforms and project management software, which can help improve overall workflow and productivity.

Customization

Customize the look and feel of your repository and documentation to match your brand and style.

Customer Experience

Robust effective processes helps understand how a business operates through to the customers. This leads to improved customer experience, enhancing your company's reputation and trustworthiness, which is vital in attracting and retaining customers.

Continuous Improvement

Regularly reviewing and optimizing processes ensures that the department remains agile and responsive to emerging threats and opportunities.

Cost Reduction

By identifying areas for improvement and implementing streamlined processes, operational costs can be reduced.

Standard Product Licensing Structure

Process Analysis & Repository Core

Requires purchase of user licenses

This Core is a customizable, dynamic central repository of business knowledge of your company processes and a suite of tools for Process Modeling, Transformation & Analysis, including importers, dashboards, free-form diagramming and tools to manage Master Data. A detailed revision and version management system is in-built for auditability.

Author

Authors are the creators of content. They are able to edit, modify and change content, and create scenarios and simulations within the library they have access to. Admin access can be granted to Authors to configure and maintain the library.

Participant

Participants play a collaborative role in continuous improvement and governance within a library. They do not have editing privileges, but can consume and collaborate on the content. They are typically the stakeholders who will be called upon to review and approve models and content.

Viewer

Viewers are the end users who utilize standard operating procedures and work instructions; view models, reports and dashboards; and consume other content created by the authors in collaboration with participants.

Process Mining & Analysis Core

Requires purchase of process analysis & repository core

This Core provides use of the Process Analysis Notebook which expedites the discovery and analysis of processes gained from log files from your business systems or from other mining tools.

The Notebook allows for rapid creation of business process maps with metrics and other useful insights, to which the user can add other process activities to create an end to end view for transparency and deeper analysis. The Notebook is loaded and executed locally for your data security.

Governance, Risk & Compliance Core

Requires purchase of user licenses

This Core provides a repository with tools to understand, mitigate and manage governance, risk and compliance. Users can create and report on the entire risk framework in one place, storing all risks, controls, documentation centrally. An auditable record of activities and documents is created as users log and maintain all risk events, manage related tasks and actions in this central repository. There are specialist add-on modules available for purchase.

Author

Authors are the Risk Managers. They have full access to the GRC core.

Participant

These are the Business Users, they have reduced access to their relevant business unit.

Viewer

These are the Basic Users, they have limited view access, and are able to action incidences.

External Data Connectors

Develop integrations with external platforms and data sources.

Professional Services

Recommended for all the Core products to accelerate and configure

The Platform is self-administered with customers able to create and manage users and content of their secure BusinessOptix Library.

Our expertise is available as a premium service to create additional value, including but not limited to:

- custom training and onboarding programs
- collaborative practical process modeling workshops with a lean expert
- process mining as a service
- custom configuration of landing pages, dashboards and other outputs
- import / rework models & data into BusinessOptix process models, SOPs, CJs
- custom development
