# Fotheringham Associates

Technology Design Service

G-Cloud 14

Technology Design Service

Highlights

- Access to skills to meet either a specific short term need or to help establish a long term competency within your organisation

- Our services are formed of a number of features, which are grouped into three stages: Ambition, Solution & Implementation

- The services can help you whether you are working at an enterprise, a programme or project level of change

- The Business Design service can be used alone or alongside our fully aligned Technology Design service to provide comprehensive support for your change programme

- You can buy straight from the G-Cloud framework with published prices and standard terms and conditions

Technology Design scope

| Business Design		
Ambition	**Solution**	**Implementation**

• ICT application landscape review	• Architecture roadmap, migration & consolidation • Digital, Cloud service & technology selection • Technology (including Cloud) business case	• ICT transition planning & management • ICT change governance • Cloud integration design • Programme or project architecture review • Development & coaching of in-house staff
Technology Design		

Technology Design Service

How it works?

- You consider the features within the Technology Design service and find the closest fit. Contact us if you need assistance, or if you think you require an approach that combines a number of features.

- Our projects are usually measured in days or weeks depending upon the scope and challenge. The nature of the work does also allow for us to engage on a hourly basis on an agreed programme of work. Where you require a longer term resourcing option this can be arranged to meet specific need.

- We use standard terms and conditions from G-Cloud, and our rates are shown in the SFIA rate card. Note that the level of resource required will depend upon the scope and type of work

Technology Design Service

What do we deliver?

- This depends on the capability that you require. Typically it can be a series of models, processes, papers or a just experienced resource onsite.

- All output is yours and we ensure that it is constructed in a way that allows you to continue using the artefacts after we leave. Knowledge transfer will be built into the delivery.

- Our goal is to deliver the service you need to enable your change.

Fotheringham Associates

Technology Design Service

Overview

Technology Design Service
Ambition

ICT application landscape review

- We will use enterprise architecture techniques to build views of your technology estate, aligning it with your business environment and ambition. This will include on premise, outsourced and cloud solutions. We will also capture architecture principles that will guide Solution phase activity.

Technology Design Service
Solution

**Architecture roadmap, migration & consolidation**

- Using a detailed understanding of your technology landscape we will articulate an architecture roadmap that will seek to underpin your business ambition. This will typically highlight consolidation opportunities, rationalisation and migration options including to, or from, cloud systems.

Digital, Cloud service & technology selection

- We can provide independent advice to support you in the selection of digital and cloud solutions ensuring that the requirements from your business ambition is considered along with the architecture principles that ensure alignment to your roadmap

Technology (including Cloud) business case

- We can assist in the building of comprehensive and robust business cases to support technology decision making. We can also provide an independent challenge to existing business cases

Technology Design Service
Implementation

**ICT transition planning & management**

- We will define the implementation plan for your technology change, including the transition to a cloud based solution. This may include trial periods or the management of a proof of concept. We can also manage your transition to a new technology platform

ICT change governance

- We can design a governance process that operates to guide your technology change at an enterprise, programme or project level, with pragmatism to balance delivery with strategic alignment. This can include the setup and operation of a Design Authority.

Cloud integration design

- Introducing cloud solutions can cause issues with the ability to share data within the organisation. We can help plan and implement integration strategies to mitigate this risk and ensure that you maximise the value of your cloud solution.
