Delivering Right First Time
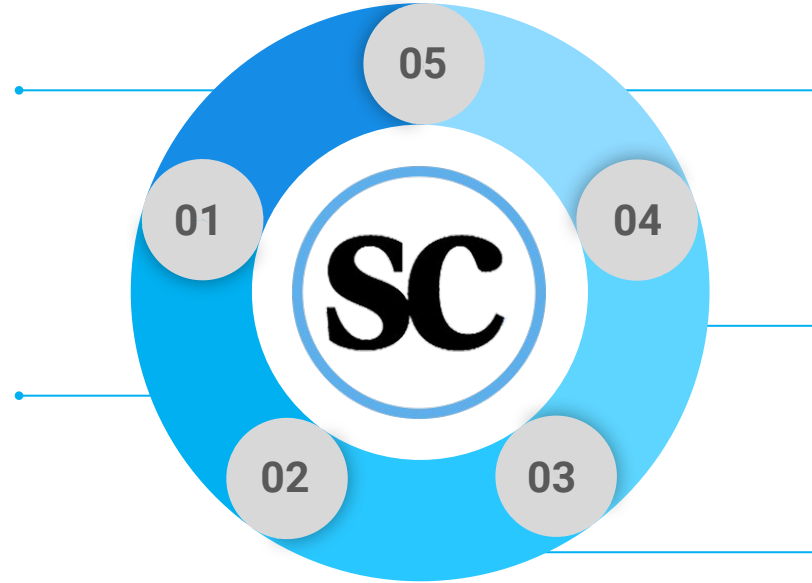

User Insights

We put the user at the heart of everything we do. Through diligent user research, we get our solutions right first time.

Rapid Concept Development

We follow the concept of 'think big, build small'. By continuous iteration, our mentality is to develop a sustainable product.

Early Product Launch

Our job is to find the quickest route from idea to digital product for our customers. Early value to users results in a virtuous delivery cycle.

Agile Working

Our delivery, and indeed our organisation, is based on agile principles. Adopting GDS ways of working enables us to help our customers deliver fast and right.

Lean Experiments

We accept that we build systems in an uncertain world. We take calculated risks through lean experiments to get ahead of the curve.
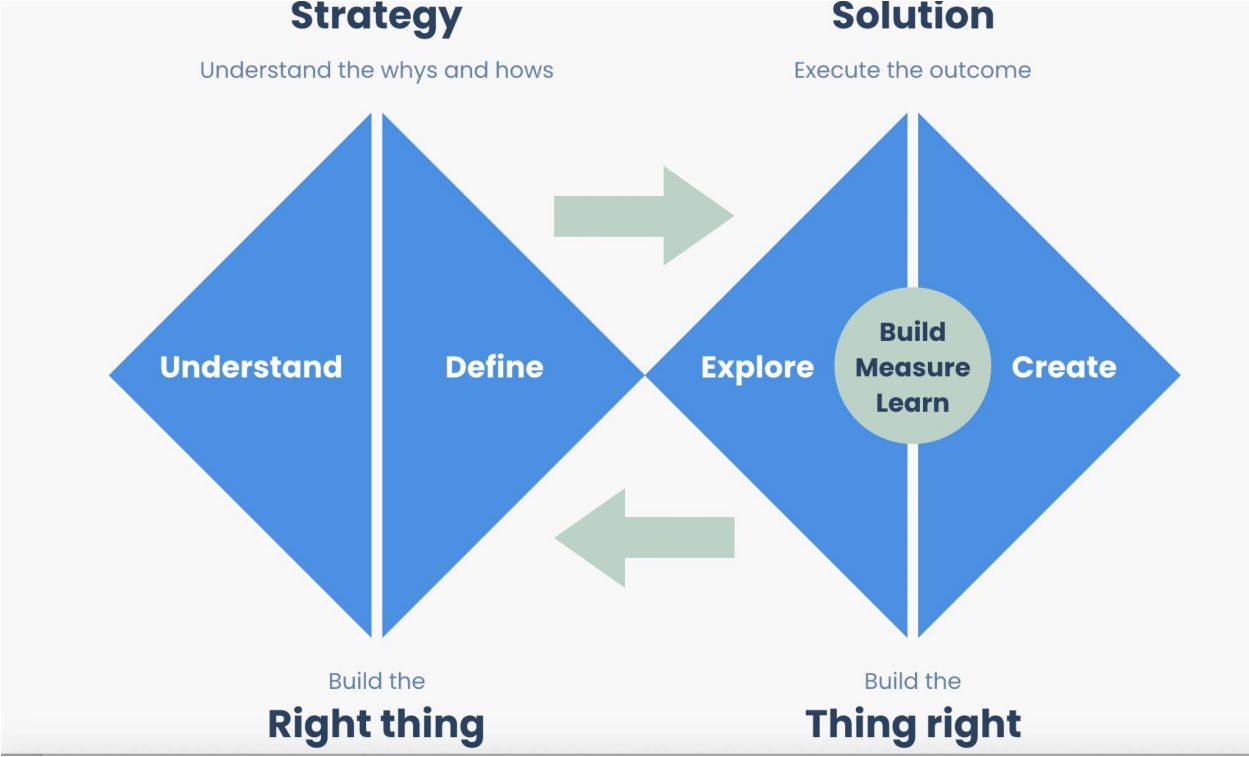

Collaboration

One Team Objective

Continuous Learning

Building for both quality and outcome without compromise

What we do

Scrumconnect provides Agile Cloud Software Development Services that help clients design, develop, and maintain cloud-based software applications. Our services are delivered using Agile methodologies and focus on creating software that is scalable, secure, and reliable. We specialise in working with AWS and Azure cloud platforms

Service Features

Our Agile Cloud Software Development Services include the following features:

- Agile software development: We use Agile methodologies such as Scrum to deliver software in an iterative and incremental manner, ensuring that clients receive working software at regular intervals.
- Cloud architecture design: We help clients design scalable and resilient cloud architectures that meet their specific business needs.
- Software development: Our experienced developers work with clients to develop cloud-based software applications that are secure, reliable, and scalable.
- Quality assurance: We have a rigorous quality assurance process that includes automated testing, code reviews, and continuous integration/continuous delivery (CI/CD) pipelines.
- Cloud infrastructure management: We provide ongoing support for cloud infrastructure, including monitoring, maintenance, and optimization.
- Security and compliance: We follow industry best practices to ensure that software and infrastructure are secure and compliant with relevant regulations.

.

Service Benefits: Our Agile Cloud Software Development Services offer the following benefits:
- Faster time-to-market: Agile methodologies enable us to deliver working software at regular intervals, ensuring that clients can bring their products to market faster.
- Scalability: Our cloud architectures are designed to be scalable, allowing clients to easily scale their infrastructure as their business grows.
- Cost-effectiveness: By using cloud platforms such as AWS and Azure, we can help clients reduce their infrastructure costs by leveraging the benefits of cloud computing.
- Security: We follow industry best practices to ensure that software and infrastructure are secure and compliant with relevant regulations
- Continuous improvement: We use CI/CD pipelines to continuously deliver software updates, ensuring that clients can benefit from the latest features and improvements.

Service Delivery: Our Agile Cloud Software Development Services are delivered using Agile methodologies, which involve the following steps:
- Discovery: We work with clients to understand their business needs and requirements.
- Design: We design a cloud architecture that meets clients' specific business needs.
- Development: We develop software using Agile methodologies such as Scrum.
- Testing: We perform rigorous automated testing to ensure that software is reliable and secure.
- Deployment: We deploy software using CI/CD pipelines, ensuring that clients can benefit from the latest features and improvements.
- Support: We provide ongoing support for cloud infrastructure, including monitoring, maintenance, and optimization
