SC

Early Product Launch

Our job is to find the quickest route from idea to digital product for our customers. Early value to users results in a virtuous delivery cycle.

Agile Working

Our delivery, and indeed our organisation, is based on agile principles. Adopting GDS ways of working enables us to help our customers deliver fast and right.

Lean Experiments

We accept that we build systems in an uncertain world. We take calculated risks through lean experiments to get ahead of the curve.
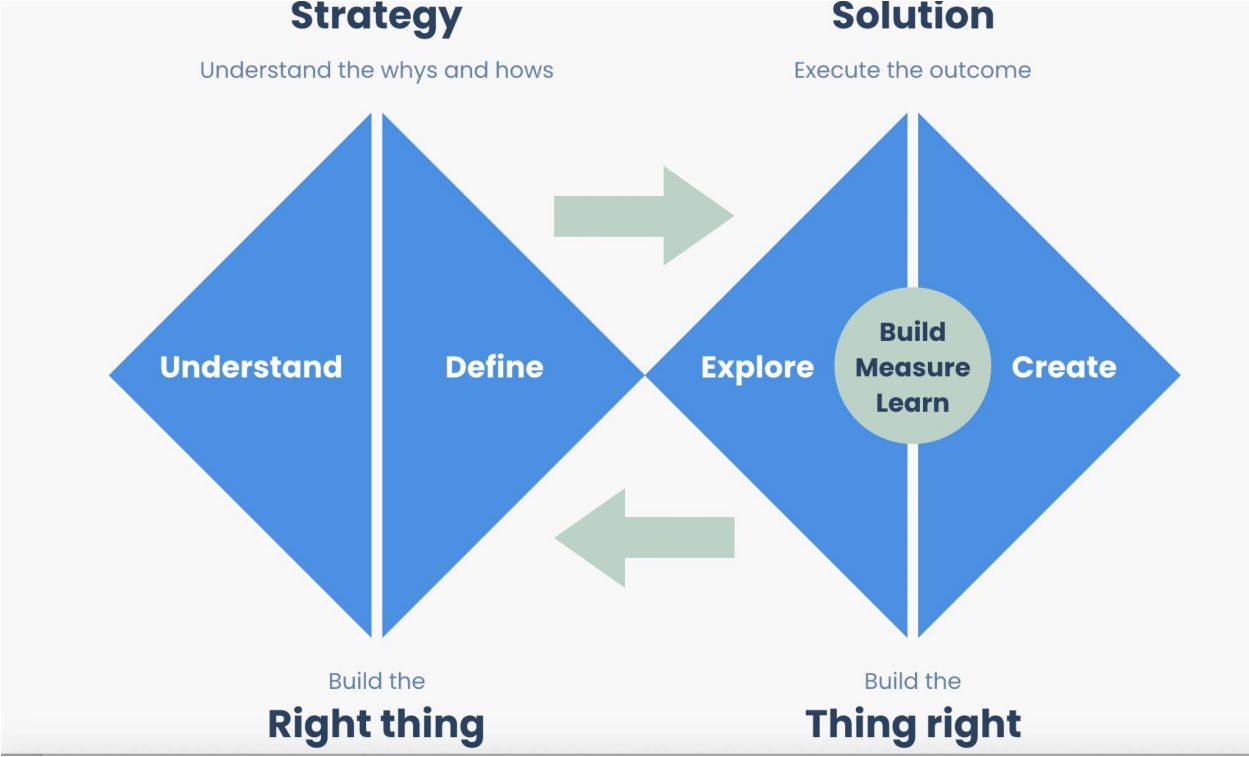

Collaboration

One Team Objective

Continuous Learning

Building for both quality and outcome without compromise

What we do

SC

Scrumconnect provides Application modernisation and migration services is designed to help organizations modernize and migrate their legacy applications.Our team of experts provides end-to-end solutions that cater to the needs of our clients, including application assessment, modernisation, migration planning, execution, and ongoing support

Service Features:

Our Application modernisation and migration services include the following features:

- Application assessment: We analyse our clients' legacy applications and provide a comprehensive assessment report that outlines the current state of the application, its dependencies, and its compatibility with cloud environments.
- Application modernisation: We modernise legacy applications by re-architecting, re-factoring, or re-platforming them to leverage cloud-native services and features.
- Migration planning and execution: We develop migration plans and execute them to ensure a smooth transition to the cloud while minimising disruption to our clients' business operations.
- Cloud security and compliance: We ensure that our clients' cloud solutions are secure and compliant with relevant regulations and standards.
- Cloud operations and support: We provide ongoing cloud operations and support to ensure that our clients' cloud solutions are running smoothly and meeting their business requirements.

Service Benefits: Our Application Modernisation and Migration Service includes the following scope:

- Reduced IT costs: By modernising and migrating legacy applications to the cloud, our clients can significantly reduce their IT costs associated with maintaining legacy infrastructure and applications.
- Improved application performance: Cloud-native services and features can significantly improve application performance and user experience.
- Increased scalability: Cloud-based solutions can be easily scaled up or down to meet changing business demands, ensuring that our clients' applications can handle traffic peaks and troughs.
- Enhanced security: Cloud solutions offer advanced security features that can help our clients protect their data and systems from cyber threats.
- Improved agility: By modernizing and migrating legacy applications to the cloud, our clients can respond more quickly to changing business requirements and market condition

Service Delivery: Our Application Modernization and Migration Service follows a well-defined delivery process that includes the following phases:

- Discovery: We work with our clients to understand their business requirements, current application architecture, and IT infrastructure. Based on this, we identify the applications that are suitable for migration to the cloud.
- Assessment: We perform a comprehensive assessment of the identified applications to determine their compatibility with cloud environments. This includes analysing the application's architecture, dependencies, and performance metrics.
- Modernisation: Based on the assessment report, we develop a modernisation plan that includes re-architecting, re-factoring, or re-platforming the application to leverage cloud-native services and features.
