

Data Loss Prevention Risk Assessment

HELPING YOU SUCCEED WITH YOUR DATA PROTECTION STRATEGY

The DLP Risk Assessment builds an organisation-specific picture of your data at rest (DAR), data in use (DIU) and data in motion (DIM). By bringing visibility to what is happening with your sensitive data we can help you make more informed decisions about how you want to protect your data moving forwards.

We bring industry best practice experience from fully accredited DLP Consultants to build a risk landscape around the data that is most important to you. This is a non-invasive log-only audit meaning it will not impact your day-to-day business activities at all.

Prioritising what Matters

We recognise that every organisation is unique; we invest our time to thoroughly scope which sensitive data really matters to your organisation before we start the actual assessment.

Credit Card Number

Valid credit card numbers found with supporting terms.

Fingerprinted Files

Selection of fingerprinted files deemed "Highly Sensitive".

Personally identified information

PII including address, date of birth and names.

Encrypted Files

Visibility on the size and destination of encrypted files leaving the organisation.

Customer Database

Sensitive data contained within the customer database.

Key Benefits

- ✓ Understand where to start on your Data Classification journey
- ✓ Bespoke auditing for your organisation's unique sensitive data
- ✓ Experienced DLP expertise to develop your roadmap
- ✓ Perfect foundation for a strong Data Security posture
- ✓ Simple to read, easy to understand report
- ✓ Invisible to your end-users
- ✓ Minimal time needed – Gradian handles the heavy lifting

Simple Visibility

We provide you with an easy to understand, digestible report, breaking down our findings based on content, channel, and destination.

Incidents

Following the completion of the 30-day audit period, Gradian will remove the DLP toolset and compile a bespoke C-Level report providing easy to understand details of the findings.

The findings are broken down into channel, data type and destination. Should you wish to analyse the results in further detail, a full breakdown can be explored with you upon request.

An Extension of your Team

Working as an extension of organisational in-house capabilities, Gradian will deliver a non-invasive DLP toolset for a period of 30 days. During the assessment we will work collaboratively with you to tune and optimise the tooling to report on what you need to know.

A Clear Path Forward

When you know which data is being mishandled, processes and tool-sets can be put into place to protect it. Once the Risk Assessment has been performed and the report delivered, Gradian are on hand to help your organisation discuss the most suitable next steps.
