

Data Loss Prevention GAP Analysis

Today's distributed landscape, coupled with the significance of your data, means that sometimes it is hard to know where to begin. During the Gap Analysis we will review your technical controls and operational processes to help you build out your DLP strategy.

What Does the Service Provide?

The Gap Analysis evaluates your existing Data Protection posture against five primary areas:

1. **Data Classification** - Are the labels you have defined appropriate for your business and are they being used effectively?
2. **Awareness** – Are staff aware of the importance of classification and how to handle data appropriately?
3. **Operational Processes** - Are your operational processes effective in managing data loss events and incidents?
4. **Transfer and Storage** - Does your data architecture support your DLP objectives?
5. **DLP Architecture** - Does your DLP architecture give you the visibility you need to protect your most valuable assets?

What are the Key Benefits?

Non-invasive to your organisation

From your perspective, we ensure that the Gap Analysis is as light a touch as possible.

Detailed report provided

We identify areas requiring improvement and highlight areas of good practice. Next steps are recorded and broken down into short / medium / long term actions for ease of prioritisation.

Ensure ROI on existing toolsets

We make it easy for you to see your relevant toolsets at a glance and understand where they can fit into your Data Protection strategy.

Understand what's missing

Data Protection is a rapidly changing industry, incorporating a wide span of tools, and we understand that it's not always easy to keep pace. We'll highlight potential gaps and provide you with vendor agnostic, technology recommendations to plug them.

We see the Gap Analysis as a strategic planning tool to help you understand where you are, where you want to be, and how you're going to get there.
