SOLUTION BRIEF

Semantic Intelligence: Intelligent Data Security Made Easy

Businesses today are drowning in data. It's growing faster than your inbox on a Monday morning — and the storage costs are just as relentless. With everyone working from everywhere, the cloud taking over, and BYOD policies running wild, data is spread out, moving fast, and constantly changing.

In the meantime, cyberattacks are getting smarter, faster, and sneakier. Collaboration tools have made sharing data as easy as sharing cat memes. Even Gen AI is spilling the beans. As if that's not enough, compliance requirements are constantly evolving. Just when you think you've got it figured out, there's a new regulation — or five — to juggle.

IT and security teams are basically superheroes... but even superheroes need a break. With limited budgets, understaffed teams, and skills gaps more expansive than Taylor Swift's fanbase, it's no wonder things feel overwhelming.

Key Benefits

- Gain superior visibility into your data
- Restrict access by business need to know
- Reduce storage costs and cyber insurance premiums
- Maximize the value of existing security tools
- Obtain quantifiable, documented proof of regulation compliance
- Launch highly secure Microsoft Copilot rollouts
- Realize faster ROI, smarter policies, and way less stress

The Struggle Is Real

Admins are basically flying blind. Most data security solutions require you to tell them what to look for. So, what happens? They only catch a tiny sliver of the sensitive data and generate tons of false positives. Many teams have so many operational conflicts they never switched out of "monitoring mode." Who has time to chase ghosts?

You don't just need a tool; you need a partner. Someone to handle the nitty-gritty, help you set the rules, and give you the keys to your data kingdom without taking away your crown.

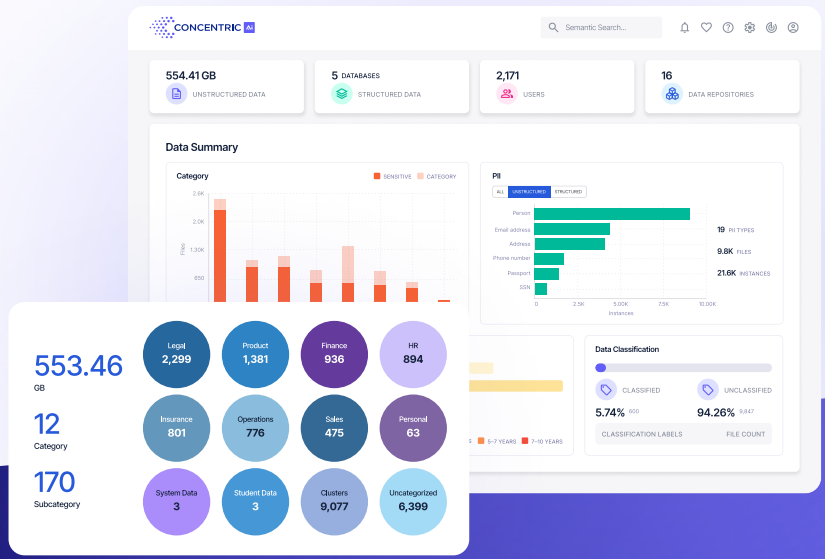

Your Data, Discovered and Demystified

Semantic Intelligence is your new data superhero. It scans everything — structured, unstructured, on-premises, and in the cloud at unprecedented speeds. No messy agents, no complex rules, and no need for a PhD in regex. It identifies sensitive records, enabling you to label them with classifications that play nicely with your existing tools like DLP, DRM, and CASB. Duplicate files can be moved or deleted directly within the tool and you can set boundaries by defining who can access what, ensuring that no more financials are "accidentally" shared with your entire company.

Meanwhile, our compliance dashboard takes the stress out of staying compliant. It gives you a clear view of where you stand with the most common industry and government frameworks. You can even drill down to see exactly where you're out of compliance and fix violations directly in the tool, and our customer success team is always there to lend a hand if things get complicated.

How We've Got Your Back

With our co-managed solution, you get the best of both worlds: expert support and complete control. Our customer success team can help with everything from implementation to policy creation and classification. You retain full access to the platform to run reports and make real-time changes whenever you need to. Your data, your rules — we're just here to make it easier.

The Results You've Been Waiting For

What does this mean for you? It means finally having the clarity you've been craving. No more wondering, "Where is our sensitive data?" or "Who can access this?" You'll know exactly what sort of data you have, who can see it, and where it's all hanging out. Say goodbye to confusion and hello to control.

About Concentric AI

Concentric AI is intelligent data security made easy. Our platform discovers, classifies, monitors risk, and protects data across cloud and on-premises environments. With AI-driven insights and co-managed services, we help businesses reduce risk, streamline compliance, and eliminate duplicate data records — transforming data from a liability into a well-managed asset.
