

EQUIFAX®

Equifax Online Portal Checks - Public Sector Gateway (PSG)

The ability to conduct checks on individuals or companies, on a case by case basis, is a fundamental part of the Public Sectors casework.

Equifax Public Sector Gateway is available with three components via Equifax Equip:

- Find, Verify and Investigate reports via Public Sector Gateway
- Consumer reports (including Vetting, Bank Account Verification)
- Commercial reports for Companies, Directors, and International

Having a single portal with a bespoke set-up, enables different teams to take reports they need, while benefiting from the overall package taken across the organisation.

Key Benefits

All reports in a single portal. No extra logging on required

Retrieval of reports in a single place accessible by those who need it

Auditing capabilities, ensuring due diligence checks can be carried out as required

Provides a comprehensive view of an individual and/or company in a single portal

equifax.co.uk/business

Service Description

Equifax Equip is our online portal, providing easy access to a variety of consumer reports and information, all through a single, user-friendly online portal so users can make fast, accurate credit decisions and checks.

Equip gives users an effective way to manually on-board, manage and trace their customers with Equip, users can access reporting services for credit, fraud and ID, debtor management and tracing solutions, batch processing and customer management.

It's suitable for companies large and small that want to make, check or audit credit decisions online.

Equip - Public Sector Gateway - Access to Data on Individuals and Businesses

The Equifax Public Sector Gateway (PSG) is the strategic platform for delivery of the majority of Equifax services to its Public Sector clients. The PSG is a secure, quick-to-implement, easy-to-use, and configurable web-based service that would provide authorised users within your establishment with access to a series of reports on individuals and businesses, each providing a specific 'view' of the available data that is focused on, and proportionate to, a specific business need. It is available via an online portal, or integrated into your systems. As appropriate, reports can be generated with the consent of the individual, or under one of the data exemptions provided by the Data Protection Act 2018. For ease of use, the reports available via the PSG are divided into three categories:

Find

These reports provide you with a powerful and flexible means of finding an individual at their current address (using full or partial name and address details), often the first step in any process be it customer engagement, debt management / repayment or investigation.

Verify

These reports establish that the individual is genuinely who they say they are, live where they say they do, and has told the truth about their personal circumstances helping you to confirm their eligibility for a service and to reduce fraud.

Investigate

These reports provide access to a diverse range of data on individuals and businesses within a single system, reducing the need for you to access multiple suppliers / systems to obtain the same data and giving a complete picture of an individual or business including their financial status and their ability to repay outstanding debt.

Only those reports you require would be displayed on the PSG 'dashboard' and made available to your users. If required, different report options can be configured for your different teams.

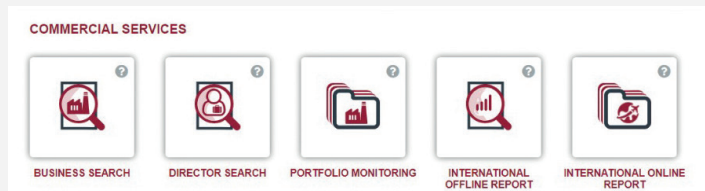

Equip - Consumer

Equifax can provide the following reports as required from our Consumer Dashboard.

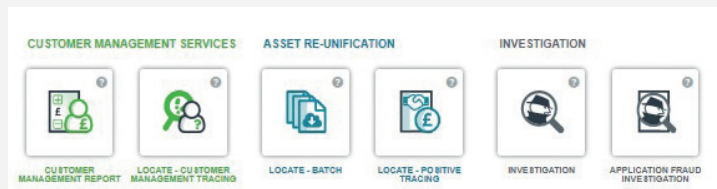

Equip - Commercial

The Commercial reports have been refreshed within Equip to provide an enhanced look, feel and searchability.

Equip - Batch

Equifax can provide access to Batch services via the Equip Platform. These include a number of services, depending on your requirements, and will be a simple and quick solution to a batch service.

Delivery Mechanism

Equifax Equip is available via an online portal. Equip including PSG, is also available as an API service.
