Overview

Causeway is a leading provider of integrated software solutions for the built environment, connecting data, processes, and people across the entire asset lifecycle. Through our **CausewayOne** platform, we are driving digital transformation for over 3,000 customers, including nearly 200 UK Local Authorities, delivering sustainable, efficient, and collaborative solutions that make construction and maintenance flow.

Over the past four years, Causeway has pursued a major acquisition strategy, investing hundreds of millions of pounds to unite leading businesses and technologies serving the public sector. Key milestones include the acquisition of Yotta (2022), one.network (2023), and Buchanan Computing (2024). In 2025, significant development work has further advanced our platform, with major innovations soon to be unveiled to customers and the wider market. These will deliver transformative capabilities for local authorities and their supply chains, and are central to fulfilling the ambitions of **CausewayOne**.

Whatever your role in the built environment sector, we've got you covered - we're used by:

Causeway AccsMap

Causeway AccsMap is a cloud-based road traffic collision analysis service that enables local authorities, police forces and road safety partnerships to manage, validate and analyse STATS19 and STATS21 collision data with confidence. It provides a powerful, map-based analytical environment where collision data can be visualised, interrogated and reported spatially, supporting evidence-led road safety decision-making at local, authority-wide and regional levels.

The service combines validated collision records with a comprehensive suite of analytical tools, dashboards and reporting capabilities. These include cluster and route analysis, monitoring site assessment, comparative analysis across authorities, and integration with connected datasets such as traffic flows, deprivation indices and population statistics. **Causeway AccsMap** is delivered as a fully managed SaaS platform, meeting DfT reporting requirements and supporting secure collaboration across multiple stakeholders.

Causeway AccsMap helps organisations turn complex collision data into trusted evidence that supports safer roads, better investment decisions and regulatory compliance. By reducing the manual effort involved in data validation, analysis and reporting, the service enables teams to focus on identifying risk, prioritising interventions and demonstrating the effectiveness of road safety measures.

Customers use **Causeway AccsMap** to defend funding bids, justify safety schemes and support transparency, ensuring decisions are auditable, consistent and aligned with national guidance. The ability to share insights securely with partners, decision-makers and the public further improves confidence, accountability and collaboration across road safety activities.

Causeway AccsMap helps customers achieve strategic goals by:

- Providing trusted, validated collision evidence to support funding and investment decisions.
- Identifying collision trends and high-risk locations more quickly through spatial analysis.
- Supporting statutory compliance with STATS19, STATS21 and DfT reporting requirements.
- Enabling cross-authority benchmarking and comparative road safety analysis.
- Improving transparency and collaboration with partners, stakeholders and the public.

Benefits

Trusted, auditable evidence

Provides fully validated, traceable collision data with audit controls, enabling authorities to defend decisions, funding bids and safety interventions with confidence.

Faster insight into risk

Uses spatial analysis, clustering and trend identification to help teams quickly understand where and why collisions are occurring and prioritise action accordingly.

Reduced reporting effort

Streamlines data validation, analysis and reporting processes, significantly reducing manual effort, duplication and time spent responding to information requests.

Stronger funding justification

Supports economic appraisal and monitoring of safety schemes by producing consistent, evidence-based outputs aligned to Department for Transport guidance.

Improved transparency and collaboration

Enables secure sharing of collision insights with internal teams, partner organisations and the public, improving accountability and confidence in road safety decisions.

Features

Validated STATS19 and STATS21 processing

Supports the loading, validation and management of collision data to national standards, including checks, status tracking and Department for Transport-compliant exports.

Map-based spatial analysis

Provides a powerful geographic interface for visualising and interrogating collisions, including cluster identification, route analysis and monitoring site assessment.

Configurable dashboards and reports

Delivers flexible dashboards, queries and reporting tools that allow both specialists and non-specialists to explore collision data in an accessible way.

DfT-compliant exports and benchmarking

Enables statutory reporting and comparative analysis by exporting decoded collision data and supporting cross-authority benchmarking and trend comparison.

Services

Our experienced Professional Services team will collaborate with you to implement your software to achieve your organisations outcomes, working in a collaborative manner to deliver your project to the agreed implementation plan.

Scope of Service

Causeway software and associated services are delivered on a Software as a Service (SaaS) basis, in a fully managed public cloud-based environment. This ensures you have access to the services from anywhere with an active internet connection using a suitable web browser or mobile device. Subscriptions, cloud infrastructure, cloud security, product updates, support desk and account management are included within the fees.

Information Assurance

Causeway's Information Security Management Framework ("ISMF") has been developed to maintain the highest standard of confidentiality, integrity and availability of internal, customer and supplier information. Policies are evaluated and reviewed periodically. We use a CREST accredited company to conduct the necessary penetration testing, aligned to OWSAP and other standards, to ensure the service is as secure as reasonably practicable.

Causeway hold ISO27001 certification with appropriate scope for the service. Our products are designed with multi-zone redundancy, with snap shots and back-ups of data taken at regular intervals. Systems are fully monitored with server and database issue/outage alerts and alarms, and the service has a set of SLAs which can be provided upon request.

Onboarding

The approach to onboarding will vary depending on the assets and services that are in scope as well as the system that you are migrating from. We will collaborate with you to agree the type and volume of data to migrate and approach to implementation, which will enable us to assess the resourcing needed. Our G-Cloud pricing will be used in the calculation of the professional services required. A copy of our on-boarding document can be provided upon request.

Implementation Plan

We will collaborate with you to agree a detailed implementation plan once we have reviewed your requirements and agreed the most appropriate approach for deployment of your service. The on-boarding process will typically be completed within 4-12 weeks, depending on the timely provision of data, import volumes and network extent.

Training

Your implementation team will collaborate with you to identify learner types, training objectives and advise on a training plan to meet all requirements. This may comprise both standard and bespoke training approaches, and a wealth of training resources are accessible through your online Learning Management System (LMS).

Pricing

Please see the separate pricing document that forms part of our G-Cloud service listing.

Trial Service

A trial service is not available.

Ordering and Invoicing

To discuss your requirements further please contact us at:

www: <https://www.causeway.com/>

email: salesukgov@causeway.com

phone: 01628 552000

To purchase the service, you will need to complete a G-Cloud Call-Off Order Form in addition to providing a valid Purchase Order. Fees will be invoiced on receipt of order and must be paid prior to the commencement of the service.

Please also see the separate terms and conditions document that forms part of our G-Cloud service listing.

Buyer Responsibilities

You are responsible for ensuring that those people you are granting access have a suitable web browser to access the service. The service will be subject to a fair usage policy, details of which can also be provided upon request.

User Community

You will have access to a range of in-person and online resources to help enable you to get the most from your investment in our software, including access to:

- Your Account Manager and wider Causeway team.
- The online learning management system (LMS) that gives you access to pre-recorded video training material as well as quizzes and other content to help maintain and expand yours and your team's knowledge of the service.
- The online product help pages for further information and support as well as updates as new features are released.
- The online Ideas Portal, where you can submit your ideas for expanding and extending the product functionality further.
- The online Community Forum, where you can interact with other users, ask questions of them and the Causeway team.

Off-Boarding

Following a request to cease the subscription service in agreement with the subscription terms and conditions, Causeway will cease to provide the service on the agreed date. On termination of the agreement for any reason, all subscriptions granted under the agreement shall immediately terminate and you shall immediately cease all use of the service.

Prior to switching off the service we will collaborate with you to agree an exit management plan, scope, and provide any additional professional services to undertake this, which may include:

- Provision of your asset and service data.
- Provision of details of the current service including configuration parameters.
- Working with you to transition to a new service.
- On the agreed date removing access to the service.
- Agreement of timings to remove all data backups and disaster recovery copies.

Further details of our off-boarding process are available upon request.
