ABOUT US

Connecting Data, Improving Care

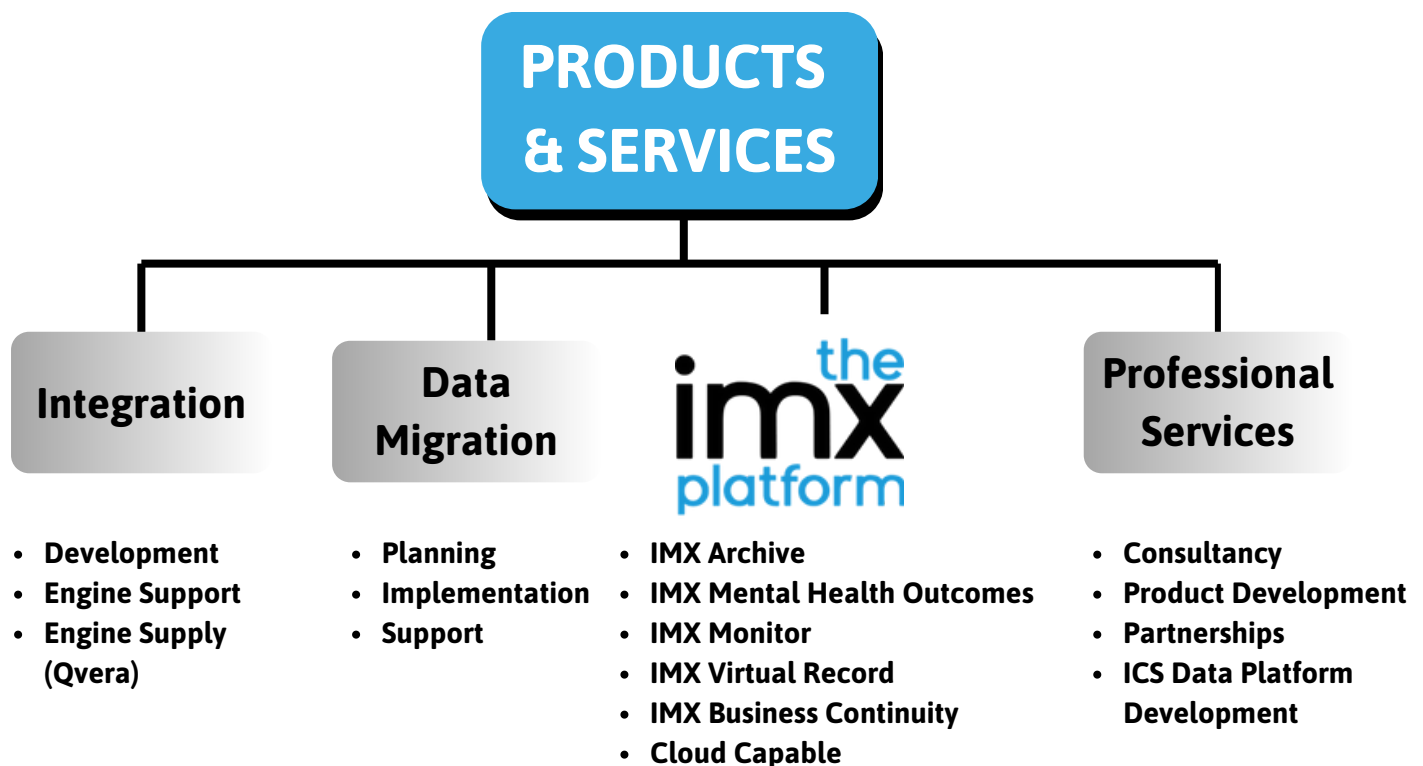

The UK's leading Data and Interoperability Experts

As the UK's leading provider of data integration and interoperability to the NHS, ReStart's team of data specialists have expertise with all major clinical and administrative systems used in health and care, including Cerner, Lorenzo, IPM, Epic, CaMIS, TPP and System C.

Over 53% of NHS Trusts have chosen to work with ReStart to help solve their data interoperability challenges and 80% of customers rely on 24/7 Integration Environment Support. ReStart provides the Qvera integration engine to organisations and also offers support to integration engines including Rhapsody, Ensemble and Health Connect.

VISION AND VALUES

Our vision is to improve patient outcomes by enabling clinicians to access the right data at the right time, across the healthcare spectrum.

ReStart is committed to delivering products and services that support improved patient-centred care. ReStart's IMX Platform has a host of applications including IMX Mental Health Outcomes, IMX Archive, and IMX Monitor that have been developed in close collaboration with NHS organisations to meet their specific needs effectively.

"IMX consolidates various systems within our Trust into a single, unified interface, providing our clinicians with a seamless experience to access all the necessary data efficiently. The platform also enables us to format certain data into documents for easier reading.

ReStart's IMX has helped to improve our data access processes, delivering considerable time and resource savings."

Dean Pates, Head of Applications and Development, Bedfordshire Hospitals NHS Foundation Trust

DISCOVER OUR SERVICES

INTEGRATION

ReStart's team of integration engineers are highly experienced in working collaboratively within NHS Trusts. Frequently working on long-term projects with NHS technical staff and third party suppliers. ReStart specialists improve existing integration methods and work to develop new data interfaces to enable systems to achieve their maximum capabilities in a precise and effective manner.

DATA MIGRATION

ReStart has worked directly with NHS customers to establish effective data migration solutions to improve the efficiency of data related projects and evaluate the quality of data with proficiency and ease. ReStart works in partnership with all major EPR suppliers and is highly experienced in handling large data exports and ensuring the integrity of data at all times.

THE IMX PLATFORM

IMX not only integrates seamlessly with other technology solutions to minimise integration complexities and facilitate future scalability requirements but is also fully customisable to meet the specific needs of each health and care setting. IMX is a software solution that is open and interoperable, allowing seamless integration with third-party systems, devices and existing ICT infrastructures.

24/7 SUPPORT AND MONITORING

As the NHS operates around the clock, ReStart's experienced team is vigilant 24/7/365 to monitor the data environment across care settings. IMX Monitor offers a choice of support plans to suit an organisation's data integration needs and the existing skills within a team. ReStart's Support and Monitoring services can cover an entire integration engine environment, including bespoke and newly deployed interfaces.
