Assuring the Resilience of the UK's National Infrastructure

Supporting the Strategic Road Network

The National Highways digital estate is a highly complex ecosystem, comprising 130 suppliers and 40 services.

Working as a trusted partner with National Highways since 2019, we have supported its Digital Services team to manage suppliers, reduce downtime, and deliver significant improvements to processes.

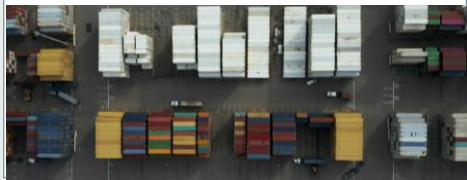

Streamlining UK-EU Trade with NCTS5

Netcompany's ERMIS solution replaced HMRC's 20-year-old legacy system with the **New Computerised Transit System Phase (NCTS)**.

The modernised, automated customs procedures for UK and EU traders improve efficiency and reduce waste.

Saving 600K+ hours in GP Surgery Administrative Work

Over 95% of **UK GP surgeries** are now processing 2.4+ million patient registrations through the NHS App.

Our work with NHS England has enabled the full digitalisation of the patient registration process, reducing what used to take weeks down to minutes.

Assuring National Security through Safe Modernisation

We work with the **Home Office** to modernise critical national infrastructure, enhancing public safety.

Our expertise supports initiatives that bolster national security and Policing efforts, such as the NIAM (National Identity and Authentication Management) technology platform.

Migrating 47 Mission-Critical Applications to the Cloud

We worked with the **UK Ministry of Defence** to migrate 47 mission-critical applications to MODCloud, supporting over 330,000 military and civilian users.

This transformation strengthens security, reduces downtime, and enables future innovation.

Vulnerability Management Service

Netcompany's Vulnerability Management Service is your robust and reliable cybersecurity partner. We specialise in detecting, assessing, and resolving vulnerabilities across your cloud and on-site infrastructure. Our service combines real-time scanning, risk assessment, remediation strategies, seamless integrations, and persistent monitoring for optimal security defence from our 24/7/365/UK facility with SC cleared engineers.

Service Features

1. Detects potential threats across cloud and on-premises infrastructure.
2. Specialises in assessing the severity of identified vulnerabilities.
3. Employs regular scanning for comprehensive threat coverage.
4. Conduct risk assessment to prioritise vulnerabilities.
5. Executes effective remediation strategies for detected threats.
6. Ensures seamless integrations with your existing systems.
7. Provides persistent monitoring for continuous protection.
8. Utilises state-of-the-art cybersecurity technologies.
9. Delivers robust defences for your digital assets.
10. Offers optimal security through a highly skilled team.

Service Benefits

1. Enhances security across your entire digital infrastructure.
2. Enables proactive detection and mitigation of threats.
3. Saves time through automated, regular vulnerability scanning.
4. Prioritises risks, helping you focus on critical vulnerabilities first.
5. Reduces potential downtime through effective remediation strategies.
6. Simplifies ITSM processes with seamless ITIL integration.
7. Offers peace of mind with continuous, 24/7/365 monitoring.
8. Leverages the latest technology for robust cybersecurity defence.
9. Protects your digital assets, ensuring business continuity.
10. Empowers your business with a skilled cybersecurity team.

Vulnerability Management Service

The Service

Netcompany offers a groundbreaking solution to fortify your cybersecurity. This service stands as a formidable line of defence against threats to your cloud and on-site infrastructure. Fusing regular scanning with comprehensive risk assessment, we identify vulnerabilities with precision and speed.

However, our service goes beyond mere detection – we also provide effective remediation strategies tailored to your unique needs. Our service integrates flawlessly into your existing IT ecosystem, ensuring a smooth, hassle-free experience.

In addition, we offer persistent monitoring to ensure your security is always at its peak. With our Vulnerability Management Service, you're not just getting a security solution, you're gaining a powerful cybersecurity ally committed to keeping your systems safe and secure.

Vulnerability Management Service

What does it do?

The Vulnerability Management Service by Netcompany is a comprehensive and proactive cybersecurity solution designed to fortify your digital landscape, whether it's cloud-based or on-site. This service operates by conducting regular and meticulous scanning of your entire IT infrastructure, identifying potential weak spots and vulnerabilities that could be exploited by cyber threats.

However, detection is just the first step in our extensive process. Once vulnerabilities are identified, our service performs a detailed risk assessment, quantifying and categorising each vulnerability based on its potential impact and the level of threat it poses to your systems. This allows for a prioritised approach in addressing each vulnerability, ensuring the most critical issues are tackled first.

Following the risk assessment, our service provides strategic remediation plans. These are not generic, one-size-fits-all solutions, but bespoke strategies tailored to align with your specific IT environment, business needs, and cybersecurity objectives. We guide your team through the implementation of these remediation strategies, providing expert advice and support every step of the way.

Our service is designed for seamless integration with your existing IT systems, ensuring minimal disruption to your operations. This compatibility extends to a wide range of systems, making the service highly adaptable and scalable.

Moreover, the Vulnerability Management Service doesn't stop at remediation. We offer persistent, round-the-clock monitoring of your IT environment, ensuring ongoing protection and swift response to any newly detected vulnerabilities. This continuous vigilance allows us to maintain your cybersecurity defence at its optimal level and adapt to evolving threat landscapes.

In essence, our Vulnerability Management Service isn't just a service – it's a holistic, end-to-end cybersecurity solution that not only finds and fixes vulnerabilities but also fosters an environment of enhanced cybersecurity resilience and preparedness within your organisation.

Vulnerability Management Service

How we do it

The operational methodology of Netcompany's Vulnerability Management Service is based on an extensive, layered, and systematic approach to cybersecurity.

The process begins with a comprehensive scanning of your entire IT infrastructure. This is not a superficial scan but an in-depth exploration of both cloud-based and on-site systems using advanced scanning techniques and tools. Our scanning process is designed to leave no stone unturned, uncovering even the slightest vulnerabilities that might be missed by less thorough methods.

Once vulnerabilities are identified, we conduct a thorough risk assessment, analysing each vulnerability in detail, examining its potential impact and the threat level it poses. Our risk assessment not only quantifies the risks but also provides a clear, ranked picture of vulnerabilities, allowing for a prioritised and strategic approach to remediation.

Our remediation strategies are tailored to your unique business context. We understand that each organisation is unique, with distinct IT environments, business objectives, and security requirements. Therefore, we develop bespoke remediation plans that align with your specific needs and goals. We guide you through the implementation of these plans, providing clear instructions, technical support, and expert advice.

Our service is engineered for seamless integration with your existing IT setup. We use a range of advanced integration techniques to ensure our service fits smoothly into your IT ecosystem, regardless of its complexity or the variety of systems and platforms involved. This enables us to deliver our service without causing disruptions to your daily operations or requiring major changes to your infrastructure.

The final pillar of our approach is continuous monitoring. Our service doesn't stop at resolving existing vulnerabilities – it stays vigilant to detect and address new ones. We use real-time monitoring tools and techniques to keep a constant eye on your IT environment, ensuring immediate detection and response to any emerging threats.

Our approach is based on a commitment to not only resolve vulnerabilities, but also to build a culture of proactive cybersecurity within your organisation. We believe in empowering our clients with the knowledge and tools to maintain robust security defence, fostering resilience and readiness to face evolving cybersecurity threats. Our Vulnerability Management Service is a testament to this commitment, delivering comprehensive, tailored, and persistent cybersecurity solutions.

How we work

A photograph of a group of people in a meeting or conference. In the foreground, a man with a beard and short blonde hair, wearing a white shirt, is smiling and looking towards the left. Behind him, another man in a blue shirt is also looking in the same direction. To the right, a woman with long brown hair, wearing a grey jacket, is partially visible. The background is blurred, showing other people in the room. The overall lighting is warm and professional.

We empower societies, companies and institutions to take control of their processes and data.

Dedicated to a Greener, Fairer Future

- Netcompany is more than a business; we're a community of employees, customers and partners committed to a sustainable and fair society.
- When working towards the Social Value Quality Mark, we developed a set of seven pledges. These support our alignment with the United Nations' Sustainable Development Goals and the UK Government's Social Value Model. Furthermore, they underpin the development of our social and environmental impact initiatives.
- We are proud to be the winner of awards and accolades from our work and contribution to social value creation and community well-being.

Social Value in 2024

■ Communities

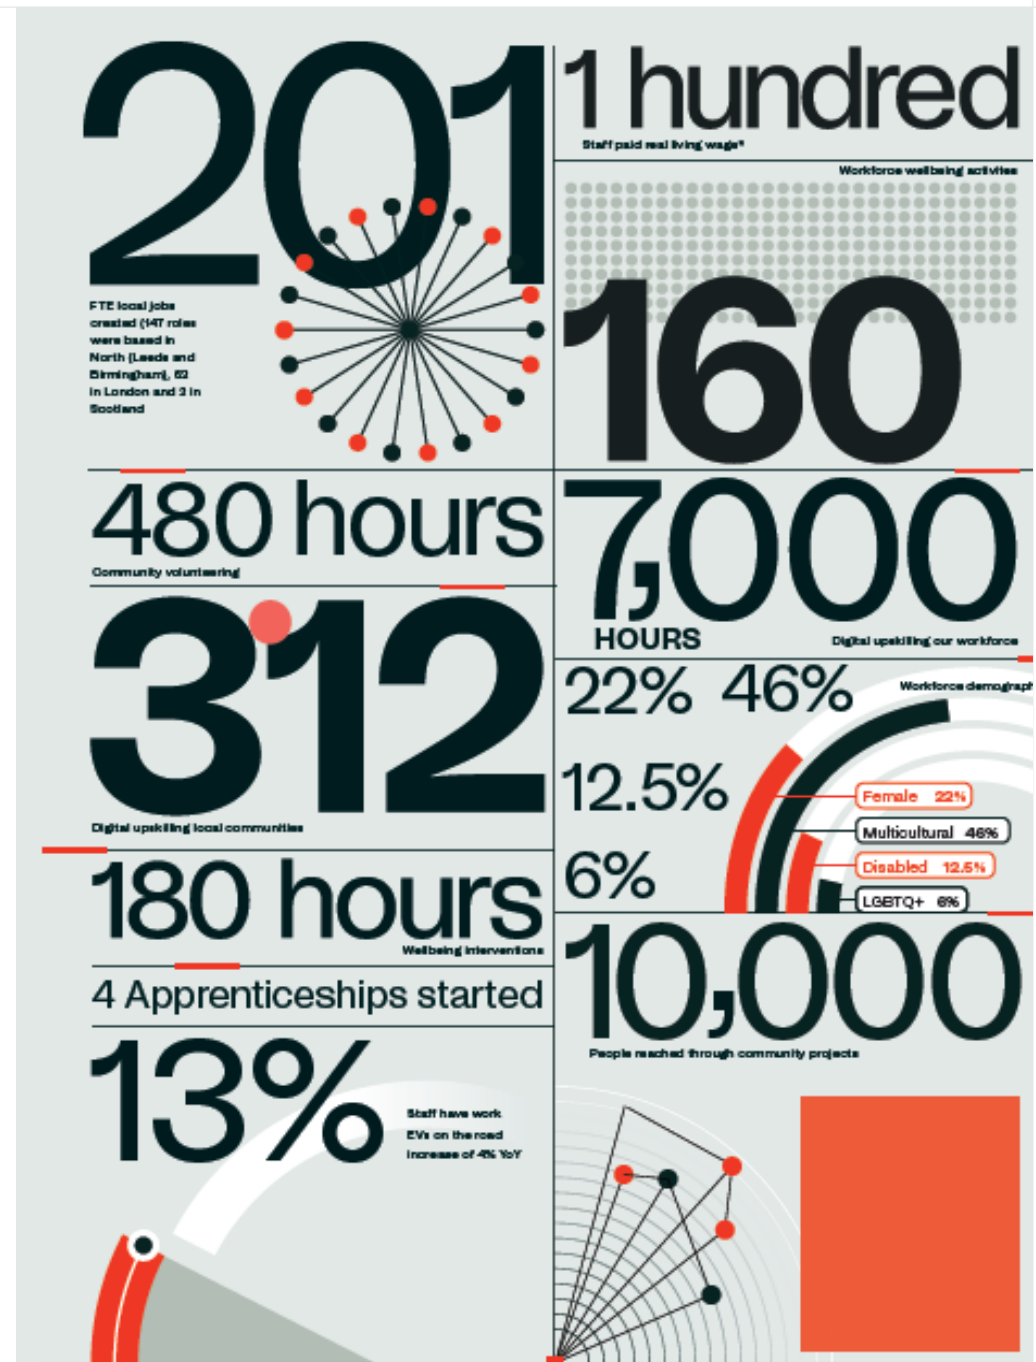

Netcompany partners with schools, charities and SMEs to build digital skills, improve access to technology and create inclusive opportunities. Through volunteering, mentoring and targeted programmes, Netcompany reached **10,000 people** across **480 hours of volunteering** in 2024, running and contributing to events with Ahead partnership, Rebel Business School and more. Netcompany helped local areas strengthen in resilience, employability and long-term economic growth with the creation of **201 FTE jobs** across London, Birmingham, Leeds and Edinburgh of which 100% are **paid real living wage**.

■ People

Netcompany invests in our people through inclusive recruitment, apprenticeships and continuous learning. We delivered **7,000 hours of digital upskilling** through our dedicated Academy in areas of digital, management and personal development. We support underrepresented groups into meaningful careers, with **4 new apprentices** who are supported by our ERGs (Women, Multicultural, Veterans, LGBTQ, Neurodiversity). Netcompany has achieved demographic representation above the industry average in areas such as ethnic minority, who make up **46% of our workforce**. We promote fair pay, wellbeing and progression, delivering **180 hours of wellbeing intervention** in 2024 through access to specialists and webinars targeting mental and physical health, and financial management.

■ Environment

Netcompany is reducing carbon emissions through an **EV scheme adopted by 13% of our staff**, promoting green IT through project Green Team Charters and tackling tech waste through our partnership with Good Things Foundation. We embed sustainable practices in delivery and supply chains, ensuring our ecosystems meet minimum requirements and support biodiversity volunteering with the NHS.

Domain expertise across many industries

- With vast technology experience and deep public sector specific knowledge, we quickly create innovative solutions tailored to your goals, delivering outcomes to address the intricate challenges currently facing governments.
- Through our innovative delivery approach, true client partnerships and exceptional people, we design and deliver solutions that have dramatically increased user engagement and provide better citizen and customer experiences for us all.

We are the customer's partner first, the software vendor's second

Netcompany is a tech-agnostic IT solutions provider, and we are entirely independent – always opting for the precise mix of technologies that is optimal to your business.

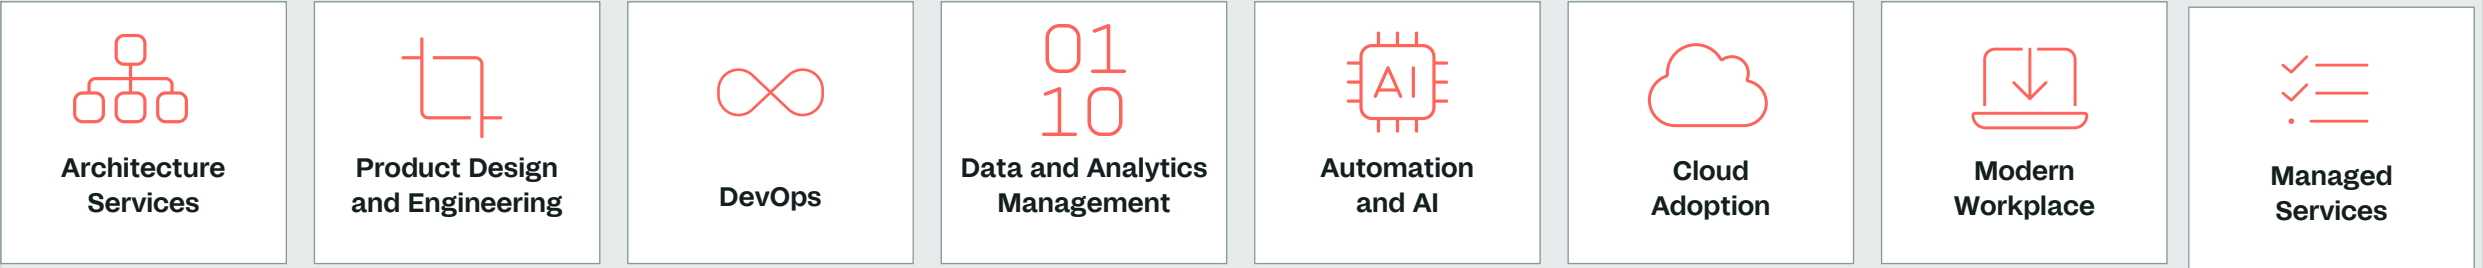

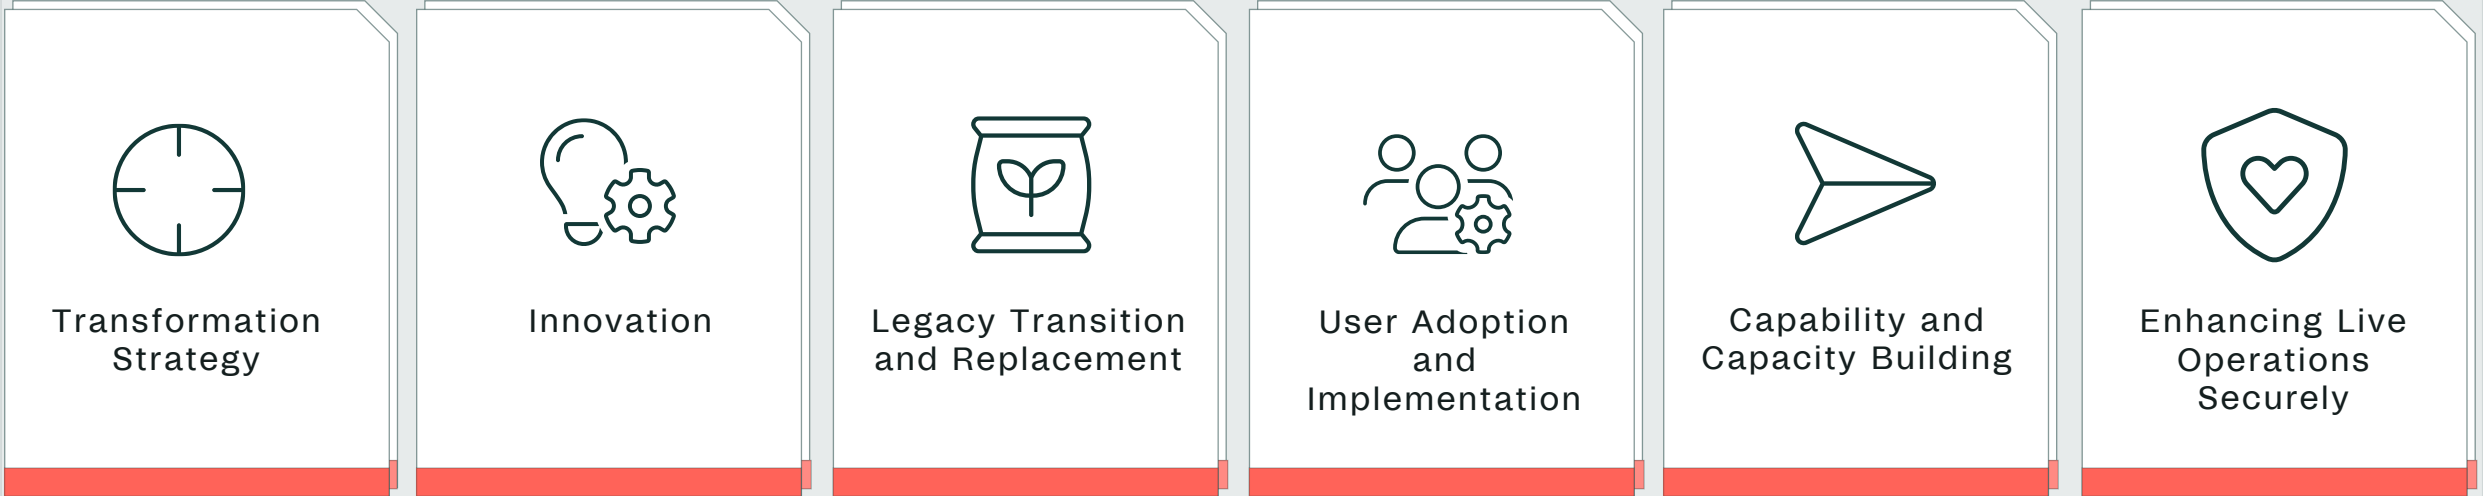

With expertise in all modern technologies and industry-targeted digital tools, we guide you through your options, combining components and software with the goal of finding the right balance between needs, agility and operating costs.

What We Do – and How

Championing Digital Sovereignty and Responsible Digitalisation, we deliver end-to-end IT services – even where others couldn't.

End-to-end transformation delivery capability

A singular delivery model that sets us apart

Open platform approach

- Legacy-free solutions with full customer ownership
- Technology agnostic – customer needs is the only thing that dictates technology choices
- Reusable components and portfolio of future-proof platforms and products

Access to unique talent

- IT people leading IT people
- No knowledge gaps
- Interdisciplinary and cross-organisational teams
- Scalable project cell structure

Building digital maturity

- Highly collaborative, on-site development approach
- We share our expertise and educate your organisation
- We nurture your digital maturity and independence

Controlled agile delivery

- A perfect mix of waterfall and agile virtues
- Control and predictability in harmony with lean, continuous improvements and adaptation

Next-generation digital transformation

Platforms for the future

A platform is something to build on. It's a solid foundation. It's safe. It's re-usable. In short, it's a responsible way of doing IT.

Why Netcompany platforms?

■ Reliability from re-use

Our platform approach prioritises successful re-use, ensuring consistency and reliability for clients, and reducing development redundancy with cutting-edge technical platforms.

■ Reduced risk

Our meticulous documentation and use of proven platforms provide a high level of transparency and agility, ensuring timely delivery with reduced risks.

Netcompany Platforms

Easily customisable, rapidly deployable,
and AI-ready - for the futureproof business.

CONTROL TOWER

PULSE™ is a control tower for a real-time data ecosystem that allows businesses to share and act on a single source of truth.

It facilitates adaptable planning and forecasting in changing circumstances, breaking down silos and providing a single view of plan, execution and results.

PROCESS AND ADMINISTRATION

AMPLIO™ is our platform for regulated case management and process automation in highly compliant environments. It's a powerful tool for digitising and controlling complex processes, providing a single source of truth for all business executions.

DIGITAL POST & ARCHIVE

AMI™ is a secure platform that connects businesses and people. As a Digital Wallet, it offers a range of compliant 'my site' features like archive, profile, sign, and pay-as-a-service.

Additionally, AMI allows fast data and document exchange with other businesses.

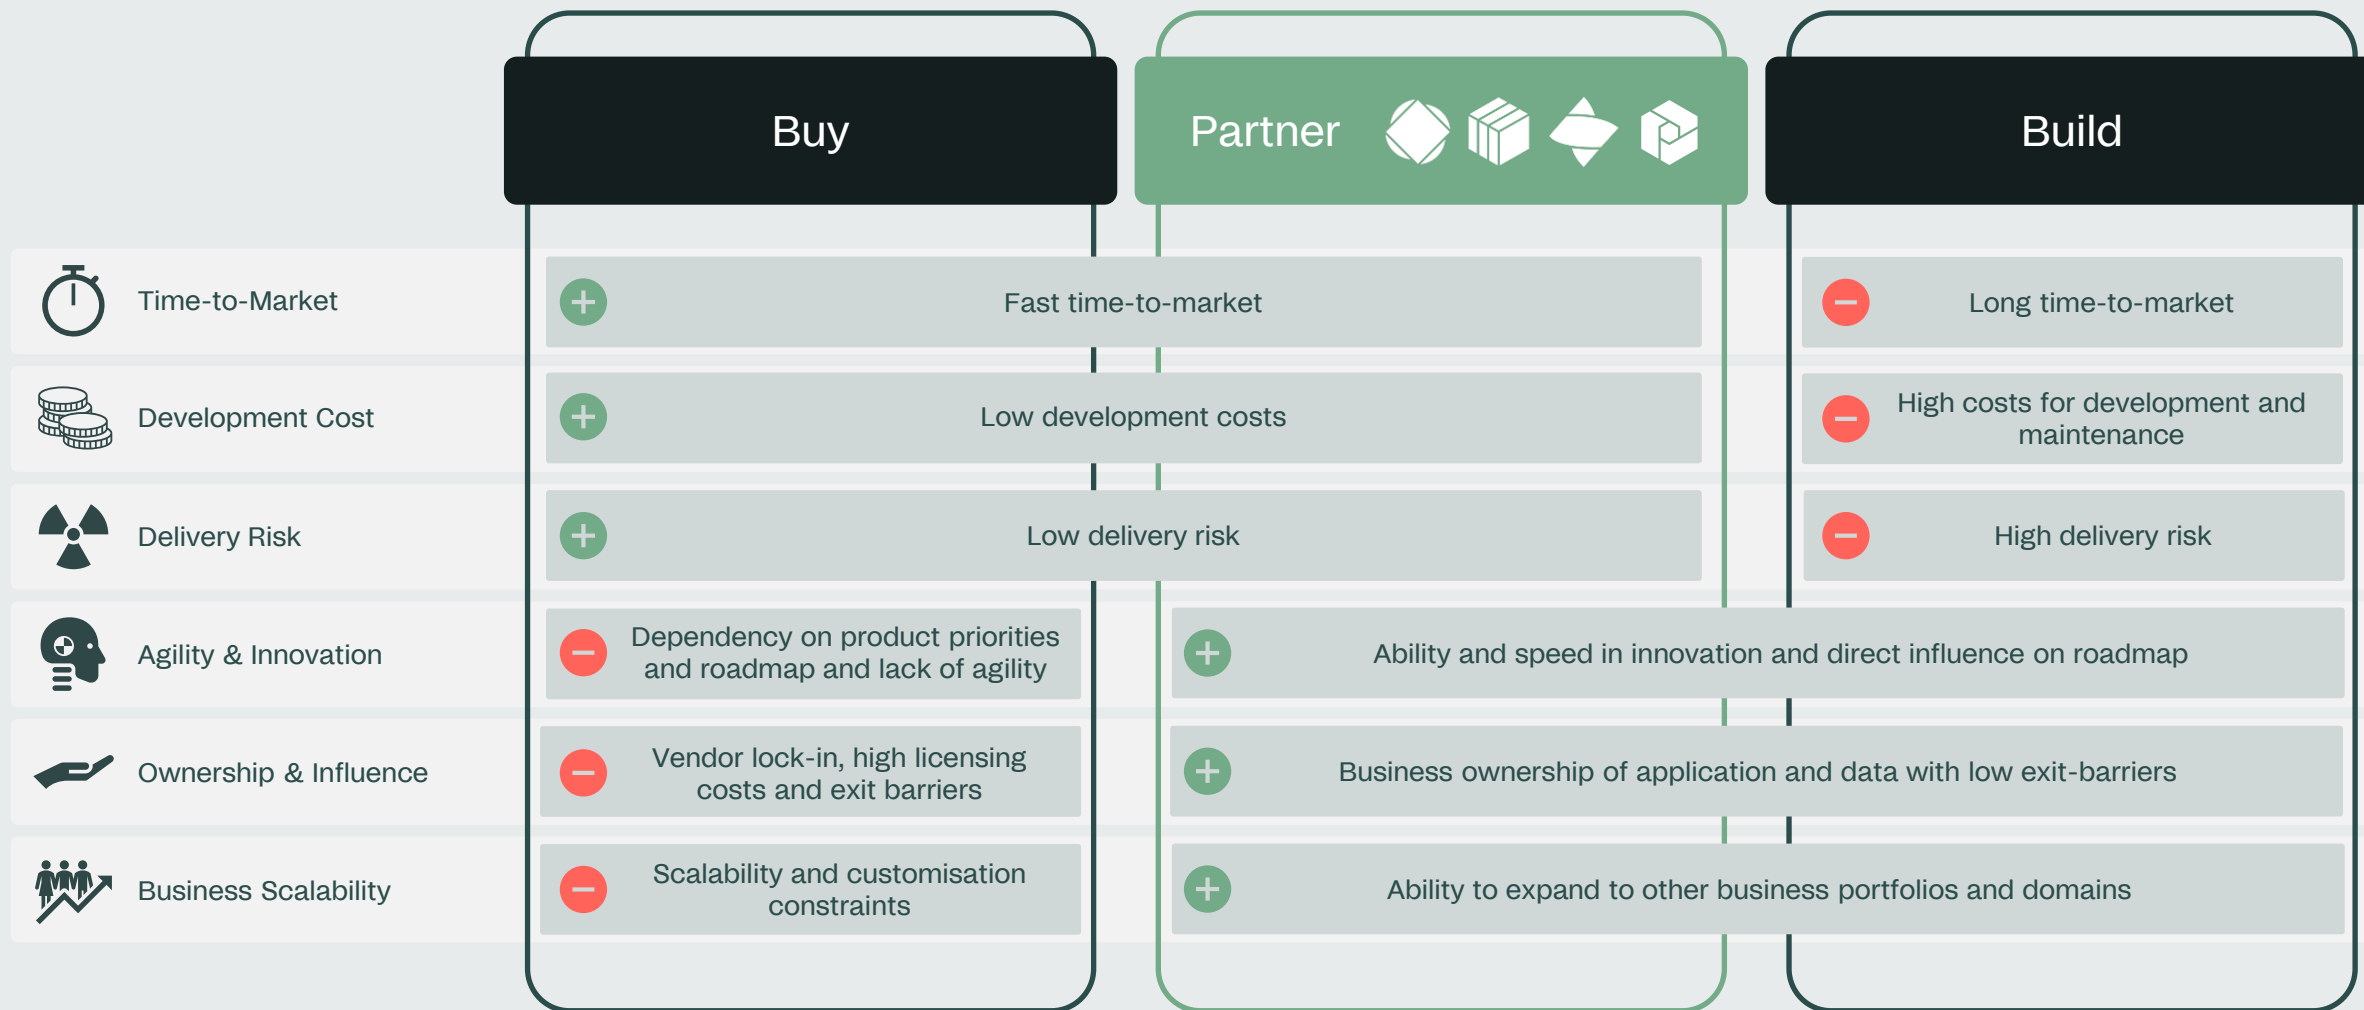

GENERATIVE AI PLATFORM

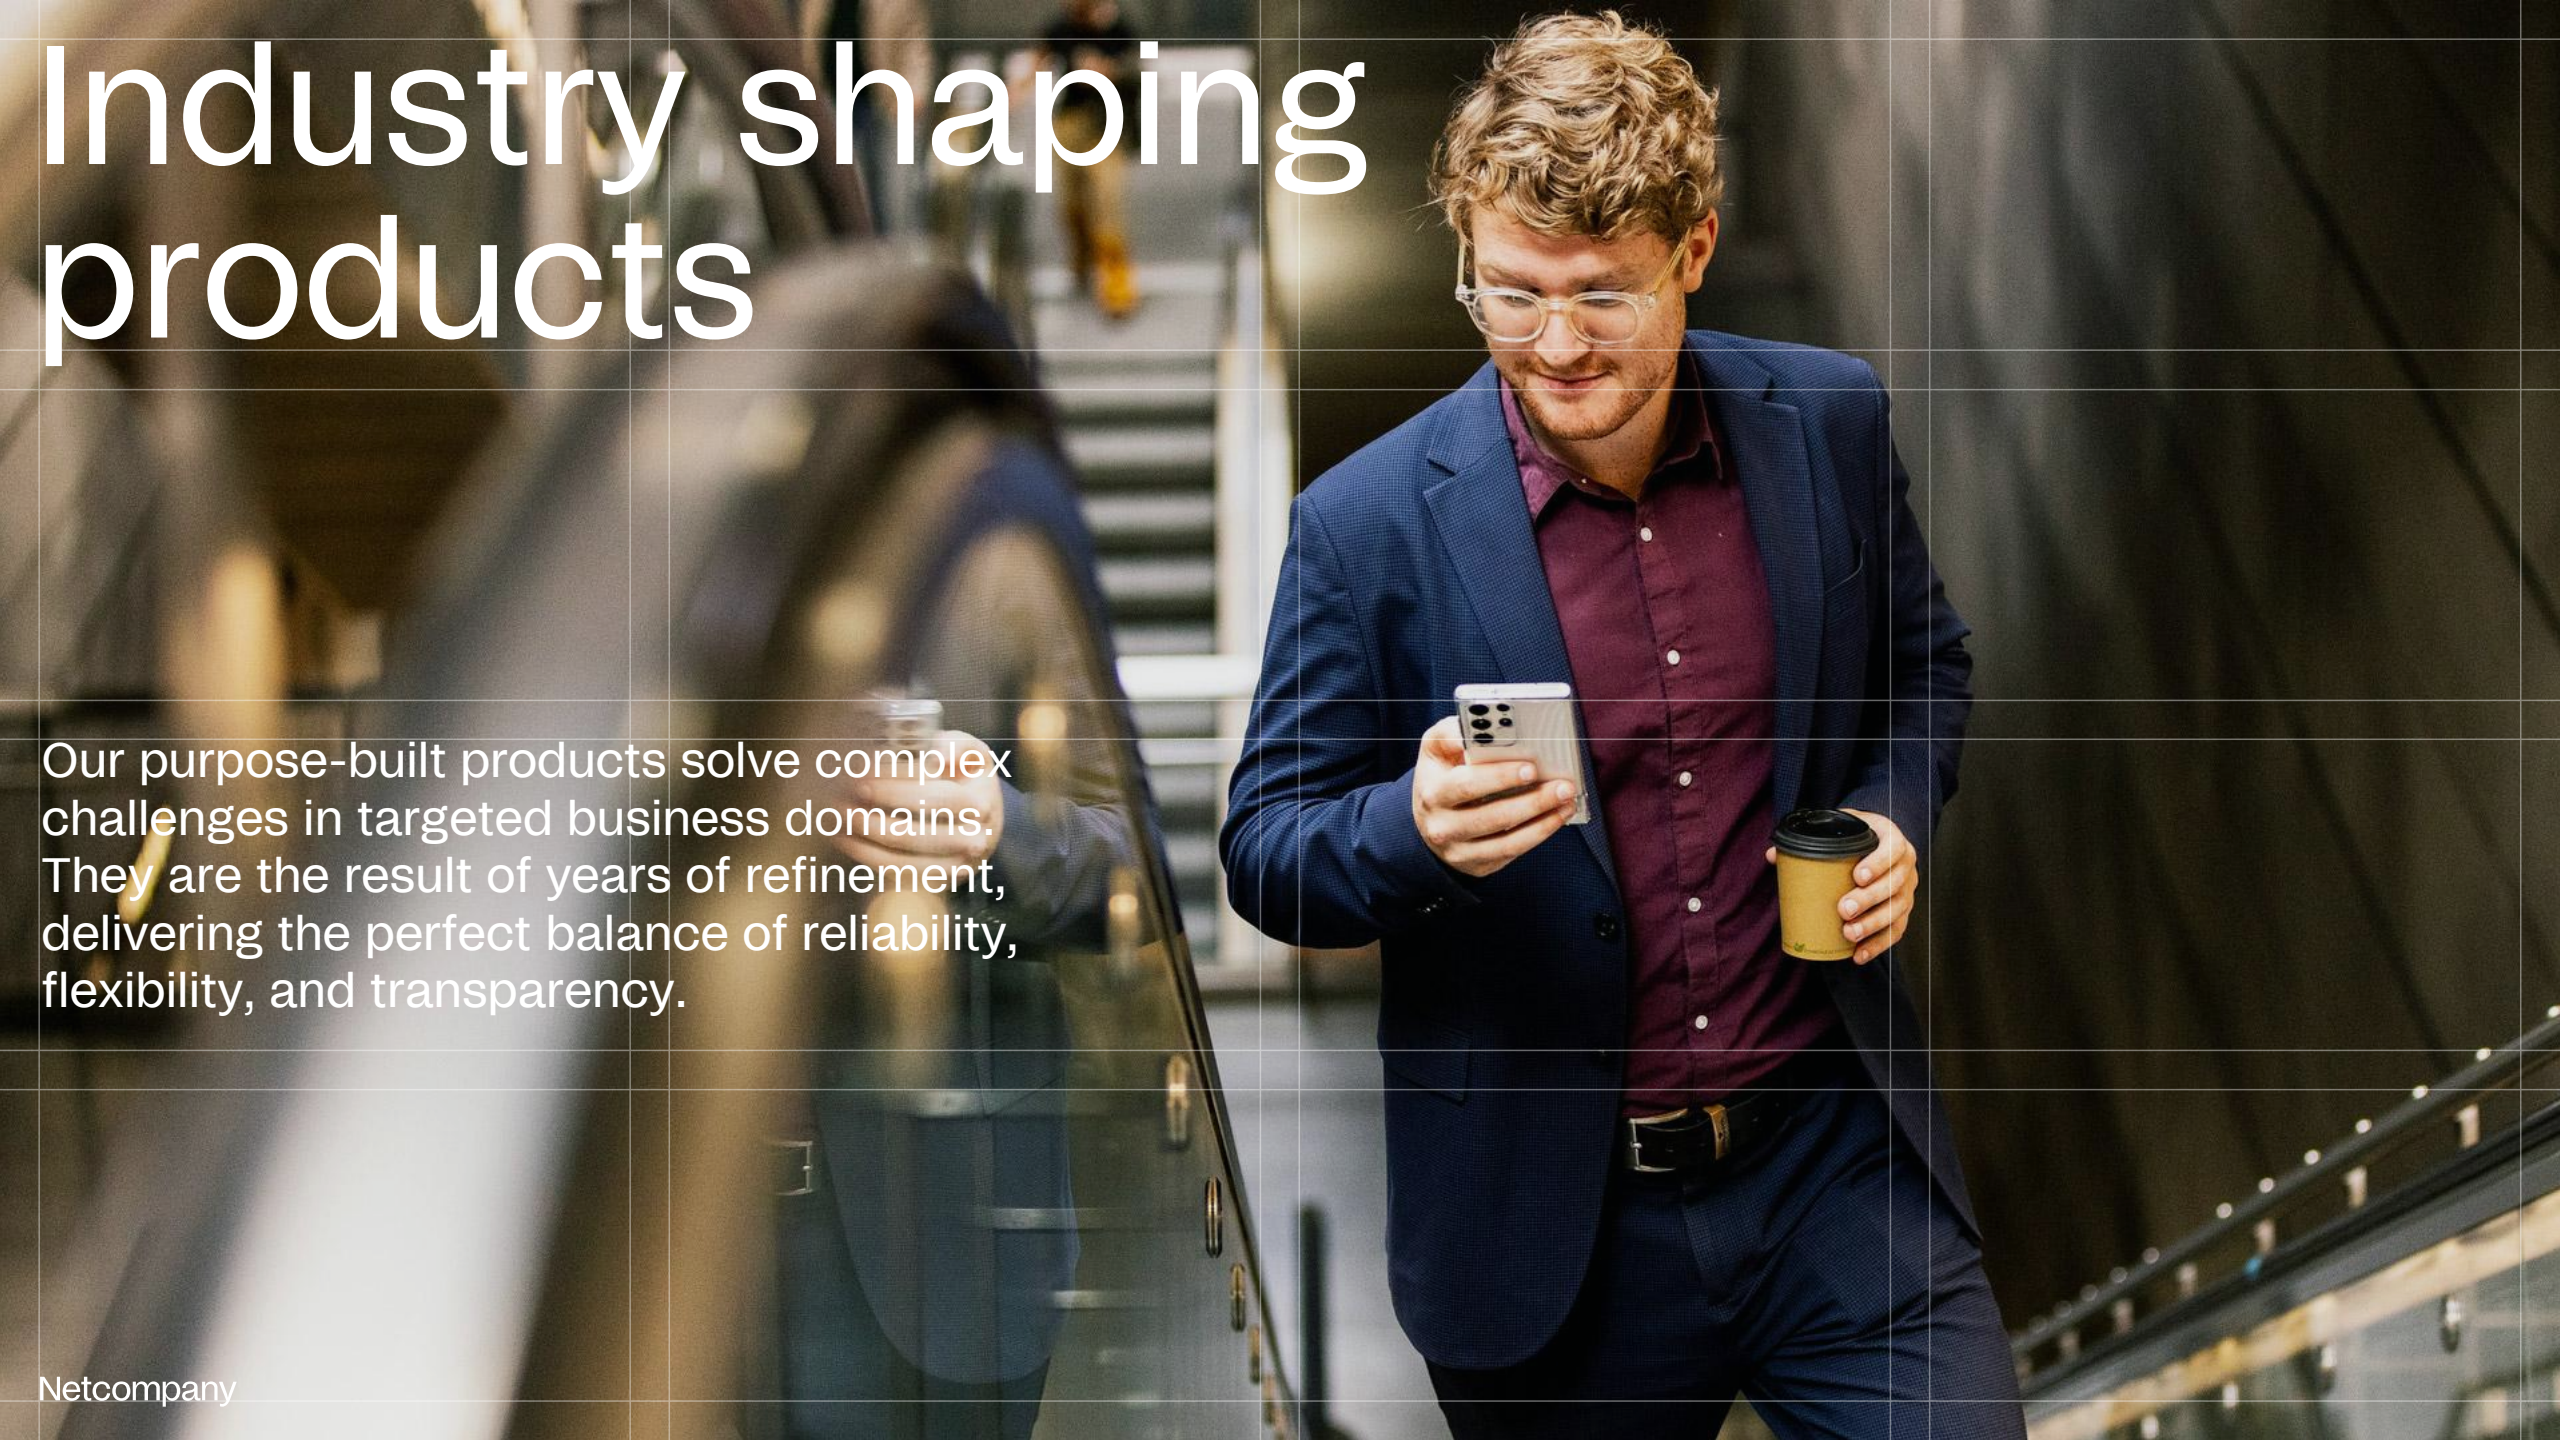

EASLEY AI™ orchestrates and leverages existing AI models, quickly connecting them to your unique business data, tools, and processes, centralising and storing data securely within EASLEY – not with the model provider – to ensure full transparency and governance of AI.

The strategic benefits of our platforms

Industry shaping products

Our purpose-built products solve complex challenges in targeted business domains. They are the result of years of refinement, delivering the perfect balance of reliability, flexibility, and transparency.

Why Netcompany products?

■ You could settle for a standard product

Off-the-shelf IT products promise speed and low cost with minimal custom work. Yet they often fall short of meeting your unique needs – leading to integration issues and hidden expenses.

■ Or choose the better way

Our range of products is designed to match your specific requirements. They offer modular integration, one transparent price to eliminate surprises, and an open-source foundation.

■ In short –

A generic IT product might seem appealing at first, but its long-term drawbacks – limited flexibility, rising costs, and integration headaches—can add up. Our products deliver the reliability, adaptability, and transparency your business needs – the result of years of refinement.

Netcompany Products

TAXATION

SOLON TAX™ is our built for purpose commercial-off-the-shelf (COTS) product for taxpayer and revenue management operations and process automation in complex revenue authority environments.

CUSTOMS

ERMIS™ is a dedicated, self-contained, reusable, and integrated family of customs solutions, with continuously evolving capabilities designed to be the customs operations management system of choice for customs administrations.

SOCIAL SECURITY

PERSEUS™ is our purpose-built commercial off-the-shelf (COTS) product for employers, insured persons, social security revenues, pensions, and benefits management operations. It facilitates process automation in complex social security environments.

DIGITAL BANKING

DX4B™ is our leading-edge digital banking solution, offering mobile banking, web banking, open banking, and digital wallets with a focus on interoperability and scalability.

RISK ANALYSIS

LUMENUS™ is a next-gen risk analysis solution designed for the public sector, offering increased usability, seamless interoperability, and a modern technology stack.

■ Our products are to our platforms what specialised tools are to a general-purpose toolkit.

While the latter reuse components across industries, our products target specific industries or business processes.

Together, they maximise our ability to reuse software at scale.

Our customers are the ones to reap the benefits.

Greater reliability

Lower costs

Fast deployment

**Simple, transparent
pricing scheme**
