

Cloud Service Discovery and Options Assessment

About Scott Logic

At Scott Logic, we build user-focused software that transforms the performance of our public and private sector clients. From citizen-centred service design to digital transformation projects, our consultants combine innovation, experience and pragmatism to deliver measurable results with every project.

Our onshore, UK delivery model allows us to attract and retain highly skilled technologists, all of whom are permanent employees, ensuring our clients receive the highest quality of service.

Our clients

Over the last 20 years and more, Scott Logic has built a strong reputation as the partner of choice for many clients across the Public Sector, as well as financial services, retail banking, healthcare, private equity, and the energy sector, including:

Our cloud services

Scott Logic offers consulting services across a broad range of capabilities, including:

-  **AI Accelerator**
-  **Architecture, Migration and Platform Engineering for Cloud**
-  **API Platform**
-  **Service Delivery for Cloud**
-  **Service Design for Cloud**
-  **Cloud Sustainability**
-  **Legacy Modernisation**

Working with Scott Logic

Scott Logic employs only permanent, UK-based technologists who share and embody our guiding values of passion, respect, excellence, collaboration and professionalism. In this way, we ensure that you, as our client, receive the highest quality of service from genuine teams. All of our engagements have Principal-level oversight and Director-level sponsorship, providing clear lines of communication and optimal collaboration. This means we build long-term, enduring partnerships, which drive value and enable our clients to transform their businesses.

Cloud Service Discovery and Options Assessment

Our Cloud Service Discovery and Options Assessment helps organisations make informed decisions before committing to delivery. We assess user needs, policy context, assumptions, risks and constraints through research and analysis, producing evidence-based options and recommendations to support go/no-go decisions and Alpha readiness, without committing to solution delivery.

Features

- Collaborative framing of the problem space and Discovery goals
- Identification and prioritisation of user needs based on research
- Stakeholder engagement to understand policy, organisational and operational context
- Assumption mapping and hypothesis-driven research planning
- User research using appropriate qualitative and quantitative methods
- Exploration of risks, constraints and dependencies (policy, data, technology and delivery)
- Lightweight prototyping to test ideas and assumptions where appropriate
- Synthesis of research findings into clear, evidence-based insights
- Options appraisal to explore possible approaches without committing to build
- Clear Discovery outputs and recommendations to inform Alpha decisions

Benefits

- Confidence that the right problem is being addressed before investment
- Shared understanding of user needs, constraints and organisational priorities
- Reduced risk of building services users do not need
- Evidence to support informed go/no-go decisions for Alpha
- Clear rationale for Alpha scope, success measures and next steps
- Early identification of risks, assumptions and dependencies
- Strong alignment with the GOV.UK Service Manual and GDS guidance
- Better decision making through validated research insights
- Avoidance of premature solution or technology lock-in
- Improved value for money through early learning and validation

Interested in partnering with Scott Logic?

At Scott Logic, we love difficult. Our UK-based permanently employed consultants collaborate with some of the world's biggest organisations, providing a pragmatic approach to designing, developing and supporting cloud services that deliver measurable value.
