

Modernize[IQ] for Accelerated Modernization to PostgreSQL

Powered by Hexarocket

Modernize[IQ] is an all-in-one GenAI solution which accelerates Oracle and SQL Server transformation to PostgreSQL database services.

Accelerating modernization project timelines by a factor of 5 by mitigating the need for manual code conversion. Simplifying schema conversion, zero downtime data migration and GenAI driven database code conversion.

Break free from Oracle and SQL platforms and unlock legacy budgets to accelerate innovation to AWS PostgreSQL with Modernize[IQ] GenAI modernization.

An Optimized Oracle to AWS migration business case delivered by Oracle on AWS specialists

Release legacy Oracle and SQL budgets to accelerate modernization

Accelerate modernization timelines by 5X

90% code conversion accuracy with domain specific trained AI.

Start with a funded modernization assessment

Modernize[IQ] GenAI Modernization Advantages

90% code conversion accuracy delivered by a domain specific privately trained GenAI model, underpinning Oracle and SQL Server to PostgreSQL code conversion intelligence.

- Accelerates code conversion and validation.
- Learns from historical migrations to improve over time.
- Reduces manual review efforts, saving weeks of effort.
- Identifies non-standard SQL patterns automatically.
- Hybrid approach, AI+human review for high accuracy.

Modernization Assessment and Business Case

Start with the modernization assessment to layout your PostgreSQL roadmap and business case. Typically funded by AWS, the assessment delivers the following artifacts.

- Target Database Architecture Design and Sizing
- Schema Refactoring Complexity Analysis
- Code Refactoring Complexity Analysis
- Data Migration Approach & Plan
- Estimated Costs and TCO business case

Accelerated Modernization Project Services

Modernization services delivered by our modernization experts. Resulting in accelerated modernization timelines. Typically, part funded by AWS.

- Project management and delivery within a secure development environment.
- Target PostgreSQL architecture design.
- GenAI schema conversation and code conversion
- Minimal downtime data migration with fallback
- Knowledge transfer and handover
