

Cloud Design Services

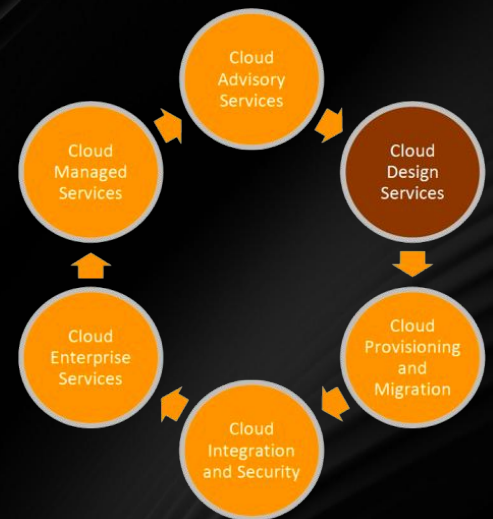

Design for cloud native, private, and hybrid application architectures using IaaS and PaaS across Oracle, AWS & Google Cloud Platform (GCP).

Cintra Cloud Design Services

While there are some benefits to lifting an application with existing architecture and deploying it on a cloud provider's infrastructure, enterprises begin to realize the full benefits of cloud solutions when they are able to optimize their applications using both infrastructure and platform capabilities across solution providers.

Key Offerings

- Cloud Platform Assessment & Recommendation Services
- Platform Architecture Design for Oracle, AWS & GCP
- Migration Design for Oracle Applications on IaaS/ PaaS
- Service Catalog Design
- DevOps Design
- Operations Management Design

Next-Level Platform

Cintra can help define and modernize your application deployment and operations for cloud applications.

Cintra's approach to cloud design for Oracle technologies ensures your solutions take advantage of platform portability when you want it and platform optimization when you need it.

Cloud Transformation

A key reality to cloud for enterprises is coexistence. It is impractical to assume all workloads or even a majority of your existing applications will move to a cloud environment.

So don't let your cloud design box you in!

The real-world in heterogeneous application workloads and technologies means you can't design for just one type of cloud.

Cintra's design services ensure you are using the right approach and the appropriate services as you deploy your applications into:

- Private Cloud
- Public Cloud
- Multi-Cloud
- Hybrid Cloud
- Integrated Cloud

Commercial Architecture

Financial incentives may not be the number one reason for moving to cloud, but it will be a major factor in the decision to stay there.

Cintra's team of architects and analyst can help you evaluate your existing support, licensing, and operations costs to help you better understand your existing Oracle IT spend requirements.

Once Cintra helps you establish a baseline, Cintra will work with you to develop the appropriate financial models to evaluate cost savings and benefits for using cloud as part of your long-term strategy.
