

Cyber Security Overview

MTI Technology are specialist technology services and solutions provider, focusing on data & cyber security, data centre modernisation and IT managed services. Since our inception in 1986, we've helped our public sector and commercial customers transform their IT operations, leverage the latest technology, maximise performance and mitigate risk across their infrastructure.

Partnerships

We are vendor-selective, by working with the best-in-class solution providers we evaluate each vendor and solution to determine if it can go answer our customers' needs. We determine to determine if it's for MTI to deliver– those partner and vendor solutions which are robust, reliable, and fit for purpose are then added to MTI's core services.

We have long-standing, integrated partnerships with market-leading data centre and cyber security partners.

The Ricoh Family

We are the data centre and cyber security specialist arm of the Ricoh family. MTI was acquired by Ricoh EMEA in October 2020 but remains a standalone limited company within the group. Ricoh and MTI have jointly, and significantly, invested in MTI's data centre capabilities and service offering over the last 12 months, so that MTI could become a centralised hub of hybrid infrastructure expertise and innovation for the Ricoh group as it looks to transform into a digital services organisation globally.

MTI's data centre and security business is now at the heart of Ricoh's 'Digital Factory', a centralised and scalable services hub for all companies in the Ricoh family to use when engaging with their customers on data and cyber security projects.

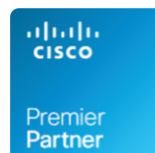

MTI are authorised solution providers across 40+ vendor technology portfolio. Our partnerships and accreditation levels include:

MTI Approach

MTI have mapped all our services and portfolio to the National Institute of Standards and Technologies (NIST) Cyber Security Framework (CSF).

The NIST CSF framework sets the highest layer of abstraction possible across all elements of cyber security and, when followed, guides any business, regardless of size or turnover, on the route to a robust and reliable cyber security implementation.

Core Portfolio

PAM

Firewall Management

Web Filtering

Server Endpoint Security

SIEM

Penetration Testing

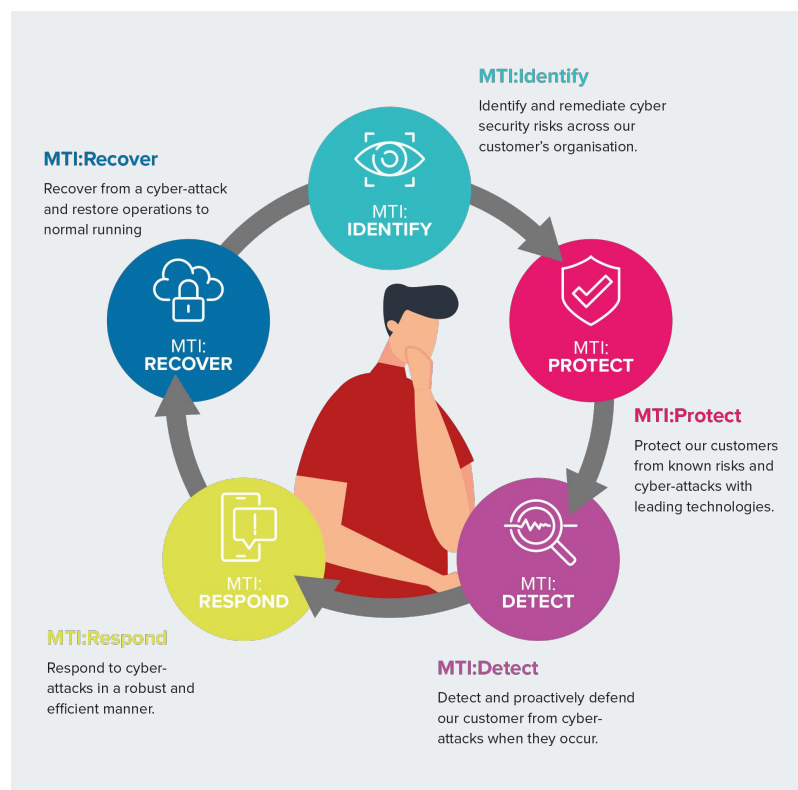

MFA

(Multi-Factor Authentication)

Security Assessments

Managed Services

The faster you detect and contain a breach, the lower the potential damage. MTI's managed services analyse, detect, and manage a potential cyber attack or new risk as and when it occurs to prevent the attack moving onto a response or a recovery incident. Get to know our Managed Services below:
