Imprivata Privileged Access Management

Protect your most critical accounts with a comprehensive, simple privileged access management solution

Privileged access management (PAM) is crucial to improving an organization's security posture and implementing an effective Zero Trust approach. Stolen or misused credentials associated with privileged and shared accounts, poor authentication, and/or lack of control over privileged access can lead to devastating security breaches – putting your business and most sensitive information at risk. In fact, reports show that more than 70% of data breaches involve compromised or otherwise abused privileged credentials.

A key component to addressing this security risk and securing your organization's most privileged users, credentials, and assets is PAM.

Meet your security initiatives with visibility and control over privileged credentials and provide least privilege access to your most critical assets and information – all without impacting productivity.

Don't compromise on security or efficiency with key features in Imprivata Privileged Access Management:

- **Zero Trust, just-in-time access to privileged accounts** Limit the attack surface by providing least-privilege, just-in-time access, ensuring only authorized users have access to the privileged accounts they need, only when they need it
- **Comprehensive password vault and management** Secure and streamline privileged password discovery, management, and rotation with automated workflows, and provide access to managed systems without disclosing credentials to end users

Imprivata Privileged Access Management is a comprehensive, easy-to-use solution that includes:

- An enterprise password vault to securely store credentials
- A robust job engine to rotate passwords and discover privileged accounts
- A session manager to broker and monitor access to-and-from privileged systems and records

- **Enforced multifactor authentication** Verify users are authorized with enforced multifactor authentication, either through seamless integration with Imprivata Enterprise Access Management (formerly Imprivata OneSign and Imprivata Confirm ID) or other industry solutions
- **Application-to-application password management** Eliminate hard-coded or embedded application credentials through a token-based API interface with unlimited Password Caches for scalability and redundancy
- **Session management and recording** Isolate, monitor, record, and audit privileged access sessions, commands, and actions in real time for total visibility into activity
- **Regulatory and cyber insurance requirements** Satisfy compliance and security requirements like GDPR, NIST, ISO 27001, HIPAA, PCI, and SOX, and avoid failing audits with comprehensive session management and detailed audit trails
- **Leverage the Imprivata digital identity platform** Take advantage of out-of-the-box integrations with Imprivata single sign-on, multifactor authentication, identity governance and administration, and vendor privileged access management (VPAM) solutions – all from a single vendor
- **Experience a higher ROI and lower total cost of ownership**
Imprivata Privileged Access Management is a light-weight solution with a modern architecture that is agentless with zero client and server footprint, allowing organizations to download and deploy the software in just minutes and easily manage on an ongoing basis

“We chose the Imprivata Privileged Access Management solution over CyberArk because of its strength in credential management in a multi-tenant architecture and its auditing and reporting capabilities. It is a mature solution that easily integrates into our IT environments, processes, and our customers’ workflows.”

– Coretek Services

DATASHEET

Imprivata Vendor Privileged Access Management (formerly SecureLink Enterprise Access)

Identify, control, and audit the remote access of your gaming vendors

A rigorous regulatory landscape and the ever-present threat of cyberattacks necessitate that casinos secure and audit the remote access of all their vendors, whether they are Class II or III gaming vendors, player tracking systems, financial institutions, POS providers, or others. In their efforts to meet regulatory requirements, IT and security teams often find themselves spending an excessive amount of time on manual processes and gathering logs to demonstrate compliance and complete audits.

Imprivata Vendor Privileged Access Management (formerly SecureLink Enterprise Access) provides casinos with a secure, standardized remote access platform that efficiently identifies, controls, audits, and documents all vendor access to their games, systems, and applications. The solution gives casinos secure vendor access while providing them with all the necessary controls and audit capabilities to document compliance with regulatory requirements.

A close-up photograph of a gaming machine's control panel. The buttons are illuminated with vibrant red and blue lights, creating a high-contrast, futuristic aesthetic. The machine's screen is visible in the background, displaying colorful game graphics.

"As I made more phone calls to other slot vendors, Imprivata Vendor Privileged Access Management kept coming up. We got curious. It obviously had to be a standard casino software that was used everywhere. So we started looking into it, and it was kind of a no-brainer after that."

– Prairie Flower Casino, Director of IT

How Imprivata Vendor Privileged Access Management helps with secure and compliant vendor access

Manage vendor identities and enforce least privilege access policies.

- Enforce the use of individual accounts, verified with multifactor authentication (MFA)
- Verify and document vendor license number and expiration date for each technician
- Verify current employment status

Provide secure, controlled, remote access to games, applications, and systems.

- Support broad connectivity requirements with access via any TCP or UDP-based protocol
- Configure granular access controls for each application, including enforcing access approvals before connectivity and receiving connection notifications
- Secure credentials in the vault and eliminate sharing usernames and passwords with technicians

Meet and demonstrate compliance with interregional and state gaming boards with audited, logged access.

- Capture and record all required information in detailed audit logs, including the “who, how, when, why, and what” of each session
- Easily investigate and resolve any incidents with HD video and text-based recordings of session activity and maintain audits for the required length of time

With Imprivata Vendor Privileged Access Management (VPAM), casinos on average see a:

70% reduction

in time spent on audits and security investigations

80% reduction

in time spent managing and tracking vendor access

50% reduction

in downtime of vendor applications

90% reduction

in time spent troubleshooting and supporting vendor access

Take further advantage of the Imprivata network:

With 41,000+

organizations, vendors, and manufacturers using Imprivata for secure remote connectivity, you likely have a vendor(s) already connecting into your network today!

Third-party access to your network is one of the most significant security and compliance risks your organization faces. Address these risks and enhance your team's efficiency with the leading vendor privileged remote access platform, designed to comprehensively secure third-party access.
