SOLUTION BRIEF

Argus Endpoint Responder

Detect and respond to threats targeting your endpoints and servers – anywhere in the world

Your endpoints and servers are sought after points of entry for attackers targeting your organisation. Instant and comprehensive visibility into these systems plays a critical role in minimising the impact a security incident may have on your organisation. The ability to investigate, search and analyse systems in real time enables security analysts to quickly identify, validate and isolate security threats.

With Argus Endpoint Responder, your systems will be protected with industry-leading preventative technology to block known threats, and our expert team of security analysts, threat hunters and incident responders will detect and respond to threats targeting your organisation – 24/7.

Argus Endpoint Responder will enable your organisation to not only remotely detect and respond to security incidents, but also isolate systems to contain the threat, capture evidence for forensics, and rapidly hunt for attacker activity that may have gone otherwise unnoticed.

Highlights

- Prevent attacks based on known threats with industry leading endpoint prevention technology
- Contain endpoints and immediately deny attackers further access to your endpoints
- Investigate any endpoint or server regardless of their location
- Rapid interrogation of all endpoints - investigate tens or hundreds of thousands of systems in a matter of minutes
- Minimise user interruptions with remote analysis, investigation, and forensics
- Deploy on-premise or in the cloud

24/7 Managed Detection and Response
Endpoints and servers are monitored 24/7 for potential threats. Our security experts analyse and investigate any suspicious behaviour to validate the threat before alerting your security team.

Fully managed service
The service is fully managed – deploy the agents and we take care of the rest. A management console is hosted either on-premise or in the cloud, and the mnemonic Threat Intelligence team ensures your systems are updated with the latest developments in the threat landscape.

Threat hunting and investigations
Whether driven by a hypothesis, an alert from authorities, or mnemonic threat intelligence research, our experts will proactively hunt for threats across your entire environment.

Correlate threat activity across your entire environment
Argus Endpoint Responder is a module of a complete Managed Detection and Response (MDR) service. Endpoint activity can be correlated against cloud, network, email, vulnerability and asset data to give a single, holistic view into the threats targeting your organisation.
