

Hunt, detect and contain threats that bypass all other security controls

A COMPLETE MANAGED DETECTION AND RESPONSE SUITE

Argus is mnemonic's purpose-built threat analytics and response platform that enables our analysts to hunt, investigate and respond to cyberthreats.

Developed over 15 years and powered by machine learning, global threat intelligence and big data analytics, Argus empowers our security experts with the tools they need to protect your business.

What is Managed Detection and Response?

Managed Detection and Response (MDR) is a complete security service to detect and respond to cyberthreats. Security analysts investigate and validate security threats before issuing an alert, and collaborate with customer security teams to rapidly respond and eradicate the threat. Utilising a combination of technology and expertise, MDR services are designed to act as an extension of your security team and represent the evolution of managed security services.

mnemonic is recognised as an MDR specialist by Gartner.
