

ENTUITY
SOFTWARE™
FROM PARK PLACE TECHNOLOGIES

Flexible, Easy-to-Use Infrastructure Monitoring Software for ITOps

DATA SHEET

Entuity Software™ enables ITOps to accomplish more with their existing teams.

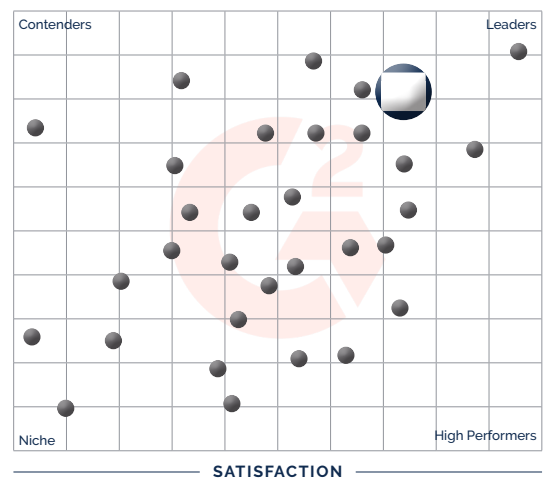

**“Excellent Customer Service
and Even Better Product!”**

– G2 Review

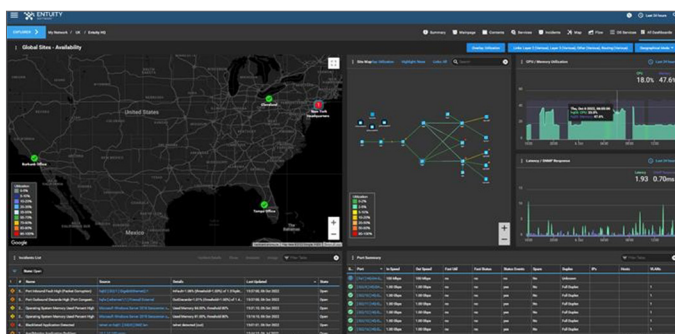

Entuity Software™ has been designated as a Leader in G2's Enterprise Monitoring Software category. Products are ranked by customer satisfaction (based on user reviews) and market presence (based on market share, seller size, and social impact).

G2 Grid® Report

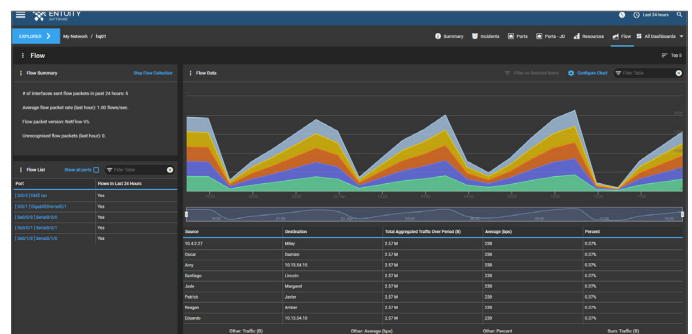

Entuity's dashboards provide real-time, comprehensive insights into infrastructure performance through intuitive visualisations and customisable widgets - enabling IT teams to swiftly identify and address issues.

Optimising ITOps Productivity & Efficiency

Entuity Software™ enables ITOps to accomplish more with their existing teams.

- **Reduce Noise:** Entuity's event management system filters events to ensure that your team receives only the most relevant and actionable information, driving a lower MTTR.
- **Integrate with Other Systems:** Entuity contains smart out-of-the-box integrations with leading ITSM, CMDB, Data Analytics, and internal messaging (Teams, Slack, etc.) systems.
- **Automate:** Entuity automates the remediation of frequent and common incidents. Entuity identifies the incident and goes through proper steps to troubleshoot the problem before engaging an engineer. Additional tasks that can be automated through Entuity include running patch scripts and generating reporting.
- **Reduce Administrative Overhead:** Because Entuity is a secure single platform vs. piecemealed modules with limited integrations, our users typically see a 60% reduction in team administration time through the reduction in physical systems needed to run the platform, not needing to spend time cleaning your asset database, or see an impact in run speed due to restarting web servers or pruning an asset database.
- **Enhance Analytics:** Entuity's strategic predictive analytics helps in identifying trends, potential failures, and capacity failures so you can forecast infrastructure performance issues before they occur. Planning around these capacity issues helps with budget planning and pacing for your infrastructure.

Entuity Software™ Functionality

- Support thousands of devices, from hundreds of vendors, out of the box
- Support for multiple protocols including: SNMP, SSH, REST APIs, etc.
- Streaming/open telemetry
- SurePath application path monitoring
- Support for SDx platforms
- Analyse network traffic with NetFlow
- Web application and SSL certificate monitoring
- Configuration management and monitoring
- API monitoring
- EOL/EOSL dates and support information
- Validate network performance with event management and root cause analysis
- Dynamic discovery via live topology and geographic maps

Each day more organisations, U.S. Federal agencies, military branches, and MSPs depend on Entuity Software™ to ensure optimal infrastructure performance and reliability through comprehensive monitoring and proactive issue resolution including the following firms.
