

Infrastructure Managed Services Optimised to YOUR Environment

PARK PLACE MANAGED SERVICES™

Trusting a partner with the monitoring and management of your networking, server, and storage environments comes with many benefits. A partner can help your team stay focused on key strategic initiatives, keep you compliant, fill skills gaps, and much more.

That said, you need a service provider you can count on when needs arise. One large enough to have the capabilities, expertise, and tools to get the job done—but agile enough give your business the time and attention it deserves.

That's where Park Place Managed Services™ comes in. We're backed by a follow-the-sun support team located in Enterprise Operations Centres (EOCs) across the globe and powered by our own monitoring tool, Entuity Software™. A combination that enables us to tailor our services specifically to your environment—making your team as productive as possible.
