

IT Health Check and Penetration Testing

Scoping and delivery of Security Penetration Test of Internet-facing systems; testing for configuration, operating system, software vulnerabilities and application vulnerabilities. Security issues identified by the Penetration Test are reported and resolutions recommended, allowing the customer to eliminate or mitigate the risk, thus greatly reducing the likelihood of a successful attack.

Service features

- IT Health Checks and penetration testing
- Infrastructure testing services
- Application testing services
- Remote Access Testing
- Social Engineering simulation
- Detailed risk mitigation recommendations consistent with Good Practice Guides
- Our approach is tailored to each organisation
- Consultant led scoping, testing and delivery
- Clear technical and non-technical reporting
- Daily debriefs on vulnerabilities identified

Service benefits

- Directly supports system accreditation objectives and ongoing annual assurance requirements
- Targeted testing of key risk aspects
- Makes sense of the 'cyber threat' through understanding of vulnerabilities
- Stakeholder confidence that technical security has been verified
- High value low cost VFM approach tailored to individual customers
- Compliance with HMG Security Policy
- Compliance with NCSC policies, standards and Good Practice Guides
- Contingency and continuity of service assured by internal CCP team
- Responsive to customer timescales and scope changes
- Quality of Service assured by ISO9001, ISO27001 accreditations
