

Digital Sensitivity Review Managed Service

SERVICE DEFINITION

SVGC, a trusted independent systems and digital engineering consultancy, has been supporting defence, government, and security markets for over 27 years. Our Digital Sensitivity Review (DSR) Managed Service delivers unique a sophisticated solution to one of the most complex challenges facing global organisations today: ensuring sensitive content is correctly identified and redacted in digital files for public consumption.

Delivering AI-driven automation in secure, sensitive public record data redaction

The DSR Toolset, developed by a team of experts in software, redaction, data analytics, AI, cyber, and policy, leverages a unique blend of Open Source, COTS tools, and bespoke AI-driven logic. This cutting-edge service automates the identification of sensitive information within digital records, ensuring compliance and enhancing security.

Key features of the Digital Sensitivity Review Managed Service:

- **Assessment & Selection:** The DSR Toolset rapidly evaluates file integrity and assesses which records should be retained for archiving, and which can be deleted through macro-appraisal.
- **Sensitivity Review:** Powered by AI, the tool pre-identifies potential sensitivities, suggesting redactions for fast user review and approval.
- **Packaging & Delivery:** Once approved, the tool packages redacted files with metadata for secure transfer to archives or other destinations, ensuring full traceability and auditability.
- **Duplication Detection:** DSR also addresses the risk of 'mosaicing' – where redacted content can be reconstructed by combining information across multiple documents.

As the volume of digital records grows, SVGC's DSR Service, speeds up the sensitivityreview process and ensures that only safe, non-sensitive content is shared or archived.Keep your digital records secure and compliant with SVGC's Digital Sensitivity ReviewService.
