

Digital Records Information Management Service

PRICING PLAN

Benefit from undertaking a digital Discovery to establish the roadmap of your Data Estate, determining what your data file system looks like on-prem and/or in the cloud its Servers, Tenancies, Archives, Repositories and other file stores, and map out your Data Estate Landscape.

Then perform a detailed Data Estate Analysis & Audit, based upon the findings of the Discovery, to explore in more granular depth the status of individual files and data content – meta-data, corruption, duplication and ephemera – and reset your data heap with clean-up, policy and disposition management, intelligent data elasticSearch AND get ready for The National Archive.

We provide a cost-effective service package to assess your data estate including:

- Discovery: top-level assessment of the data estate sources and files – feeding...
- Audit: a detailed root-and-branch review of digital holdings
- Fix: curation of the data estate and streamlining for more efficient business

Digital Records Information Management Services are supplied on a defined requirement scope of supply, either across a fixed term project delivery agreement or on a T&M delivery basis across SFIA aligned day-rates. Pricing of the service will vary according to the outcomes of scoping a service definition based upon scope, scale and classification.
