Red Team Services

A Bechtle Packaged Solution

Bechtle's Red Team services provide controlled cyber-attack simulation to assess how effectively an organisation can detect, respond to, and manage real world threats. Unlike traditional penetration testing, Red Team engagements focus on end-to-end attack scenarios and organisational response rather than individual vulnerabilities.

Each engagement is objective led and delivered within clearly defined rules of engagement, providing insight into the effectiveness of security monitoring, incident response, and decision-making processes across people, process, and technology.

How does it work? While the steps will vary depending on your organisation's requirements, let's take a look a the typical engagement stages:

1 Define

Agree objectives, scope, and rules of engagement.

2 Prepare

Confirm authorisations, safety controls, and testing windows.

3 Simulate

Conduct controlled adversary led activity aligned to objectives.

4 Review

Assess detection, response, and decision-making effectiveness.

5 Improve

Provide actionable insight to enhance security capability.

BENEFITS OF THIS PACKAGE

- Assesses real world detection and response capability
- Identifies gaps in monitoring, escalation, and incident handling
- Improves coordination between security teams, tools, and processes
- Strengthens organisational cyber resilience
- Supports continuous improvement of security operations

WHY BECHTLE?

- Europe's largest IT provider.
- Supporting security strategies for 30+ years.
- Specialised professional services, provided by security certified engineers.
- End to end support across industry leading IT security vendors.

WHAT'S THE COST?

Pricing is agreed based on the defined scope, objectives, and duration of the engagement.
