

CYBER ESSENTIALS

A BECHTLE PACKAGED SOLUTION

The Cyber Essentials certification has been designed to enable businesses to demonstrate an established best-practice framework for monitoring and managing common cyber threats, this is vital because vulnerabilities can leave you open to attacks and can highlight your business as a target for more in-depth, unwanted attention from cyber criminals and others. Cyber Essentials certification gives you peace of mind that your defences will be protected against the vast majority of common cyber-attacks, simply because attackers are looking for targets who do not have the Cyber Essentials standard in place.

The certification is achieved through a self-assessment which is available through a secure hosted portal, powered by the Cyber Essentials assessment platform. As an organisation, you will assess yourself against five basic security controls, while one of Bechtle's qualified assessors will verify the information provided. To help ensure the assessment process goes smoothly, our team can provide consultancy/assistance to help with ensuring the right level of detail for the responses, and also highlight any weaknesses that may cause an issue with certification. Let's take a look at the process:
