

Communications Management

The ACOS Communications Management module is a complete, automated processing solution for gaining the appropriate authorities to acquire communications data, including automated acquisition.

Why Communications Management?

Service line management

View and update service details quickly and easily. A SPoC log enables automated and manual entry of key events and an 'at a glance' view summarises all service details.

Authorisation workflows

Workflows provide robust and time-saving processes for authorising SPoC approval or return for re-work.

Searchable information

A single, separated access, subscriber database of operator access, cost and contact detail enables management to search for communications data applicants and authorising individuals.

Altia is highly experienced in the covert field

We have decades of experience working closely with officers in covert operations and some employees have experience of working in those teams. This partnership has enabled the development of solutions that truly meet operational needs. We provide all associated services, such as training, database administration, health checks and configuration work. All Altia staff engaged in the development and delivery of ACOS are cleared to SC level and a number to DV level.

The latest security and technology standards

Built using cloud technology ACOS comes with the latest standards in security, flexibility and resilience. It can be upgraded and adapted to meet compliance and new feature requirements faster than ever without creating a heavy IT or administrative burden.

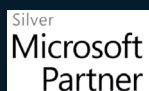

About ACOS

Communications Management is one of nine ACOS modules:

- Communications Management
- Information in Confidence
- Intelligence
- Prison Surveillance
- Protected Persons
- Source Management
- Surveillance
- Technical Services Unit (TSU)
- Undercover

By using the complete suite, covert activity is managed end-to-end from a single central point, ensuring only those users with the right level of authority and clearance can see relevant data. With the ability to review, mark for retention or authorise for disposal, ACOS ensures adherence with record and product management guidelines.

ACOS is currently used by law enforcement in the UK and internationally, helping them manage covert operations effectively, discreetly, and securely while complying with regulations, policy, legislation and best practice procedures. Because of its modular design, ACOS can be easily tailored and scaled depending on organisational needs.
