

Moesif Service Description

Types of Services Provided

Moesif, Inc was founded in 2017 and developed the Moesif Platform (the Platform) to provide a solution that helps businesses grow and monetize their API products through sophisticated API analytics made available through self-service dashboards. The Platform also enables usage-based billing with connectors for popular billing providers and provides a UI-based workflow engine to help businesses govern and manage their API programs.

The Platform is hosted on cloud computing infrastructure and can be accessed from any web browser to deliver its services through a software-as-a-service (SaaS) model.
