

Digital Places Support

We provide support for the cloud toolset of the Digital Places public sector Programme hosted by Oxfordshire County Council. The toolset addresses all aspects of mobile connectivity user experience and mobile network performance including understanding the problem and procuring practical solutions.

Features

- Crowd Sourced mobile network performance data
- Mobile network performance measurement software
- RF planning and modelling solutions including AI modelling
- Mobile connectivity surveys
- Mobile connectivity user experience estimation and assessment
- Advanced GIS mapping support for mobile and fixed connectivity
- Procurement support and market engagement for mobile connectivity
- Mobile network capacity calculation and modelling
- Data platform services for cloud storage
- Community engagement to address mobile connectivity issues

Benefits

- Detailed understanding of mobile connectivity in a location
- Clear options for resolving mobile connectivity issues
- Tools to allow authorities to carry out mobile network surveys
- Crowdsourced mobile data
- Support for engagement with Mobile Network Operators
- Support for engagement with Neutral Host providers
- Clear subsidy control and procurement regulation advice
- Joined up mobile connectivity engagement
- Comprehensive end to end mobile connectivity improvement approach
- Better mobile connectivity
