01 About Made Tech

Who we are and what we do

About Made Tech

Established in 2008, Made Tech helps public sector organisations deliver technology at pace. Our services include digital service delivery, technology skills enablement, legacy applications transformation and data infrastructure and insights.

We work exclusively with public sector organisations, and our work follows Government Service Standards and is aligned with the Service Manual and Technology Code of Practice.

We're experts in delivering public sector services based upon easily scalable platforms and are leaders in delivering digital, cloud-based technology platforms using modern software engineering and architecture, and lean and agile software delivery practices.

Working collaboratively with our central and local government clients, we create user-centred, evidence-based, end-to-end services that reduce costs and vastly improve the user experience.

We understand how to deliver successfully using a business outcome-based approach. This ensures we deliver against the highest priorities, maximising value and minimising waste.

Continuous improvement, learning and mentoring are key values for us, and we are committed to sharing new and improved ways of working with client teams when we see opportunities to improve capabilities.

Our mission

To help the public sector build world-class technology teams, that practice the sort of techniques and ways of working you would see in an internet-era business.

02 Deploy and Integrate Commercial Off the Shelf Solutions

Delivering user-centred digital, data and
technology services to the UK public sector

Deploy and Integrate Commercial Off the Shelf Solutions

Service description:

Often, it makes sense to buy solutions rather than building.

In those scenarios, we can provide expert guidance to help clients assess options, make an appropriate choice and deploy the solution.

We can also help to integrate with other systems and tune for performance.

Deploy and Integrate

Commercial Off the Shelf Solutions

Service features:

- Capture integration requirements
 - Create and execute implement integration plans
 - Assess and support transition from legacy platforms or products
 - Assess and recommend maintenance and support plans
 - Examples: Microsoft Dynamics, PowerApps, PowerBi, Pega, ServiceNow, Terraform, DataBricks
 - Evaluate needs and identify a shortlist of suitable products
 - Conduct comparative assessments based on real world use cases
 - Make recommendations on product selection
 - Make recommendations on hosting
 - Plan and support deployment
- 
- Three overlapping green triangles of varying shades (light green, medium green, and dark green) are positioned in the bottom right corner of the slide, pointing upwards and to the right.

Deploy and Integrate Commercial Off the Shelf Solutions

Service benefits:

- Access to experienced practitioners who are familiar with the products
 - Removes need for internal resources to deploy and configure solutions
 - Independent assessment of candidate products untainted by vendor bias
 - Network of expert consultants available to support niche scenarios
 - Migration expertise to provide a seamless transition from legacy solutions
 - Faster time-to-value compared to custom development
 - Proven, tested solutions reducing implementation risk
 - Access to vendor support and regular updates
 - Lower total cost of ownership for standard capabilities
 - Focus internal resources on business requirements
- 
- Three overlapping green triangles of varying shades (light green, medium green, and dark green) are positioned in the bottom right corner of the slide, pointing upwards and to the right.

03 Previous experience

Examples of our work

Ministry of Housing, Communities and Local Government: **Homes for Ukraine**

Problem:

A digital service for the Homes for Ukraine scheme to support refugees. The service was to be **launched to coincide with the policy announcement**, meaning **MHCLG had to respond incredibly quickly**.

Solution:

We **rapidly deployed (<7 days) an SC-cleared multidisciplinary team** (engineering, UCD, data) to work with other suppliers and MHCLG senior leadership. **Policy teams were invited to service mapping and user research sessions** to unlock benefits of quickly testing ideas and making frequent iterations. **Existing architecture was re-used to accelerate delivery**.

Outcomes:

- Working service launched within 10 days.
- High levels of engagement across MHCLG, including method advocacy of Deputy Director.
- The service enabled 180,000 expressions of interest in its first week and the settlement of ~120,000 guests to date.

NHS England: GP Interoperability (GP-IT) Patient Record Migration Programme

Problem:

Patient record transfers relied on physical transportation of paper files, taking up to 8 weeks and creating **dangerous care gaps**. 70 million paper records scattered across practices led to frequent **data loss**, immense **administrative burden**, and required 24/7 manual operations for 62.5 million patients.

Solution:

We replaced the road-transport model with an **instant digital warehouse**. We developed 27 data archetypes and interoperability standards, ensuring that when a patient moves, their data moves with them instantly. This included:

- **Cloud-native architecture** providing a secure digital repository.
- CI/CD and test-driven development for **24/7 availability with zero downtime**.
- **Comprehensive monitoring** to resolve issues before they impact patient care.

Outcomes:

- Enhanced continuity of care - patients no longer waiting weeks for GPs to access critical medical histories.
- Record migration times reduced from 8 weeks to 1 day.
- Significantly reduced data loss during transfers.
- Zero unplanned downtime maintained throughout.
- Monthly cost savings of £75,000 through reduced manual processes.
- Scalable technical foundation established for future healthcare digital initiatives.

Ministry of Justice: Modernising the court results system

Problem:

The Bichard 7 application manages **transfer and processing of 10-15K daily case results** from court systems to the Police National Computer. MoJ wanted to modernise it with **reliable, cost-effective modern technology**.

Solution:

Given its criticality, we took a considered approach to rolling out replacement functionality. We focused on **moving to cloud and removing expensive proprietary licences**, before full legacy replacement and building new user centred products. **Test-driven development, automation and AI driven code analysis** accelerated delivery.

Outcomes:

- Our iterative delivery released value early and de-risked delivery.
- Police users have a new service with intuitive navigation, aligned to GDS standards, fully accessible and designed inclusively.
- Easy to maintain solution with reduced total cost of ownership.

“

With the great support and guidance from the managed services team at Made Tech, I'm delighted to say this project has been a huge success. A great level of dedicated work has gone into helping us modernise the application, migrate it to AWS and rollout ongoing improvements to meet the needs of our users.

”

Dom Tomkins, Ministry of Justice Service Owner
