In the bottom right corner of the slide, there are two overlapping green triangles. The triangle in the foreground is a vibrant green, while the one behind it is a slightly lighter shade of green.

01 About Made Tech

Who we are and what we do

About Made Tech

Established in 2008, Made Tech helps public sector organisations deliver technology at pace. Our services include digital service delivery, technology skills enablement, legacy applications transformation and data infrastructure and insights.

We work exclusively with public sector organisations, and our work follows Government Service Standards and is aligned with the Service Manual and Technology Code of Practice.

We're experts in delivering public sector services based upon easily scalable platforms and are leaders in delivering digital, cloud-based technology platforms using modern software engineering and architecture, and lean and agile software delivery practices.

Working collaboratively with our central and local government clients, we create user-centred, evidence-based, end-to-end services that reduce costs and vastly improve the user experience.

We understand how to deliver successfully using a business outcome-based approach. This ensures we deliver against the highest priorities, maximising value and minimising waste.

Continuous improvement, learning and mentoring are key values for us, and we are committed to sharing new and improved ways of working with client teams when we see opportunities to improve capabilities.

Our mission

To help the public sector build world-class technology teams, that practice the sort of techniques and ways of working you would see in an internet-era business.

02 Digital Delivery of Shared Products, Services & Platforms

Delivering user-centred digital, data and
technology services to the UK public sector

Digital Delivery of Shared Products, Services & Platforms

Service description:

We deliver end-to-end Discovery, Alpha and Beta/Live phases for multi-channel digital services.

Our multidisciplinary teams build reusable, interoperable microservices using modern cloud architectures and agile delivery, providing automation at pace and scale whilst upskilling your teams.

Digital Delivery of Shared Products, Services & Platforms

Service features:

- Design/development of service patterns and open source, loosely-coupled reusable services
 - Modern Cloud Architectures (AWS, Azure, GCP, Microservices, APIs, PaaS)
 - Modern CI/CD, Dataops/Devops/Webops (Terraform, Ansible, Kubernetes)
 - Modern Software Engineering (TDD, .NET, Java(Spring Boot/CXF/Jetty), Ruby, Python, Go, NodeJS, React)
 - Platforms (Minimum Viable Digital & Data Platforms), and interoperability
 - User-focused service design for holistic view and consistent user experience
 - Agile Delivery, Delivery Management (Scrum, Kanban, etc) meeting GDS Standards
 - Work in and lead multidisciplinary, blended teams emphasising collaboration
 - Outcome focused, practical, pragmatic agile approach tailored to your needs
 - Upskilling and capability building while delivering consistent user-centred outcomes
- 

Digital Delivery of Shared Products, Services & Platforms

Service benefits:

- Upskilled internal workforce with skills to continue development in-house
 - Reduced administrative burden through self-serve and holistic life journeys
 - Products will meet the GDS Digital Service Standard
 - Modular, interoperable, sustainable, maintainable open-source products. Live implementation
 - ISO9001 & ISO27001 accredited for consistent and secure delivery standards
 - Insight and data-driven approach ensuring evidence-based decision making
 - Rapid, iterative, reduced-risk delivery of solutions that meet user needs
 - Deliver value at pace and scale, with flexibility for change
 - Reduction in development time, cost and risk
 - Clear KPIs that allow you to measure and articulate success
- 

03 Previous experience

Examples of our work

Ministry of Housing, Communities and Local Government: **Homes for Ukraine**

Problem:

A digital service for the Homes for Ukraine scheme to support refugees. The service was to be **launched to coincide with the policy announcement**, meaning **MHCLG had to respond incredibly quickly**.

Solution:

We **rapidly deployed (<7 days) an SC-cleared multidisciplinary team** (engineering, UCD, data) to work with other suppliers and MHCLG senior leadership. **Policy teams were invited to service mapping and user research sessions** to unlock benefits of quickly testing ideas and making frequent iterations. **Existing architecture was re-used to accelerate delivery**.

Outcomes:

- Working service launched within 10 days.
- High levels of engagement across MHCLG, including method advocacy of Deputy Director.
- The service enabled 180,000 expressions of interest in its first week and the settlement of ~120,000 guests to date.

NHS England: GP Interoperability (GP-IT) Patient Record Migration Programme

Problem:

Patient record transfers relied on physical transportation of paper files, taking up to 8 weeks and creating **dangerous care gaps**. 70 million paper records scattered across practices led to frequent **data loss**, immense **administrative burden**, and required 24/7 manual operations for 62.5 million patients.

Solution:

We replaced the road-transport model with an **instant digital warehouse**. We developed 27 data archetypes and interoperability standards, ensuring that when a patient moves, their data moves with them instantly. This included:

- **Cloud-native architecture** providing a secure digital repository.
- CI/CD and test-driven development for **24/7 availability with zero downtime**.
- **Comprehensive monitoring** to resolve issues before they impact patient care.

Outcomes:

- Enhanced continuity of care - patients no longer waiting weeks for GPs to access critical medical histories.
- Record migration times reduced from 8 weeks to 1 day.
- Significantly reduced data loss during transfers.
- Zero unplanned downtime maintained throughout.
- Monthly cost savings of £75,000 through reduced manual processes.
- Scalable technical foundation established for future healthcare digital initiatives.

Ministry of Justice: Modernising the court results system

Problem:

The Bichard 7 application manages **transfer and processing of 10-15K daily case results** from court systems to the Police National Computer. MoJ wanted to modernise it with **reliable, cost-effective modern technology**.

Solution:

Given its criticality, we took a considered approach to rolling out replacement functionality. We focused on **moving to cloud and removing expensive proprietary licences**, before full legacy replacement and building new user centred products. **Test-driven development, automation and AI driven code analysis** accelerated delivery.

Outcomes:

- Our iterative delivery released value early and de-risked delivery.
- Police users have a new service with intuitive navigation, aligned to GDS standards, fully accessible and designed inclusively.
- Easy to maintain solution with reduced total cost of ownership.

“

With the great support and guidance from the managed services team at Made Tech, I'm delighted to say this project has been a huge success. A great level of dedicated work has gone into helping us modernise the application, migrate it to AWS and rollout ongoing improvements to meet the needs of our users.

”

Dom Tomkins, Ministry of Justice Service Owner
