- Delivery Governance and Benefits Tracking (P3MO-enabled)
- Change, Skills & Adoption (including Copilot Enablement)
- Independent Vendor Selection and Commercial Support
- Operating Model and Sustainment ("AI Centre of Enablement – Lite")

AI Consultancy Services

Stoneseed's IT Project Delivery focused AI Consultancy Services for IT Project Delivery help organisations plan, govern, deliver and realise value from AI-enabled initiatives as part of their wider IT change portfolio. Rather than treating AI as a standalone innovation exercise, this service embeds AI within established project, programme and portfolio delivery frameworks to ensure outcomes are controlled, measurable and aligned to business objectives.

At its core, AI Consultancy provides the expertise to transform AI strategy into working solutions. Many organisations recognise the potential of AI—whether through automation, analytics, generative AI or intelligent decision support—but struggle to move from concept to delivery without increasing risk, cost or complexity. AI consultants support this transition by shaping initiatives that are technically feasible, commercially justified and operationally sustainable, while remaining compatible with existing IT delivery models.

A key element of the service is AI-focused discovery and design within project initiation and early lifecycle stages. This includes identifying where AI genuinely adds value within business processes, assessing data readiness and constraints, and defining clear success measures before delivery begins. By grounding AI initiatives in well-defined requirements and realistic delivery plans, organisations avoid "proof-of-concept sprawl" and ensure that AI projects progress with the same discipline as any other IT investment.

Our AI Consultancy Services also play a critical role in governance, risk management and assurance during delivery. AI introduces new considerations around data protection, model behaviour, security, explain ability and regulatory compliance. Within IT projects, AI consultants work alongside project managers, architects and PMOs to ensure these risks are identified early, governed appropriately and tracked throughout the delivery lifecycle. This approach helps boards and senior stakeholders maintain confidence that AI projects are being delivered responsibly and in line with organisational standards.

Whether you need skilled resource provision or a fully Managed Service, Stoneseed helps you maximise project success and improve IT project delivery through flexible, expert support.

Effective resource management means deploying the right skills, at the right time, on the right projects—without the delays, costs and commitments of permanent recruitment. Stoneseed's Project Management as a Service (PMaaS) model gives you access to experienced project professionals exactly when you need them, scaling up or down to match demand while maintaining delivery momentum and budget control.

From a delivery perspective, AI Consultancy supports architecture and integration planning, ensuring AI components fit coherently within existing platforms, applications and infrastructure. This includes defining how AI services interact with core systems, managing data flows, and monitoring performance and resilience. Rather than isolated solutions, the focus is on enabling AI capabilities that scale and evolve within your broader IT landscape.

AI Consultancy Services also extend into change, adoption and benefits realisation—often the deciding factors in project success. AI-enabled systems frequently change how people work, make decisions and interact with technology. Consultants support delivery teams by helping define operating model changes, training needs and adoption strategies, ensuring AI solutions are embedded into day-to-day operations rather than remaining under-utilised technical assets.

Ultimately, AI Consultancy Services for IT Project Delivery are about making AI deliverable. By applying structured project discipline, governance and delivery expertise to AI initiatives, organisations can move beyond experimentation and deliver AI solutions that are trusted, adopted and aligned to strategic outcomes. This ensures AI becomes a sustainable part of the IT delivery portfolio, rather than a high-risk distraction from core business priorities.

Why Stoneseed?

Stoneseed is a specialist Project Management Service Provider with over twenty years' experience delivering high-quality IT Professional Services. We understand the project delivery market and offer true end-to-end service—from IT Advisory and Business Architecture through to Project Management and service transition—all at competitive cost.

Because our project teams are employed by Stoneseed and on our payroll, you avoid IR35 complications entirely while gaining access to experienced professionals who can start delivering immediately, without recruitment delays or additional compliance burdens.
